

Ravi Meeting notes

Investment Strategy Discussion and Backtesting Insights (10 Feb 2026)

00:00 This is not our primary thing. We are physicians, both of us. Yeah, I did look it up, yeah. We have a hobby, ah, of, ah, for, ah, need, ah, financial, ah, investment is our pet peeve kind of stuff.

00:14 So, last six years or so, we've been in, ah, we've been, we've been investing for a long time, and, ah, we've been working with leveraged, ah, plays, ah, for the last five years.

00:24 Five, six years. Okay. Ah, with variable success, ah, and, ah, we are trying to find, ah, we are trying to adopt a, ah, unemotional, ah, method of, ah, investment.

00:37 Ah, we don't like trading too much. Okay. So, we are trying to, ah, be, rather than picking stocks, we just, ah, we try to leverage up the U.S.

00:47 economy. Okay. By, ah, the, ah, the SPY, just leverage up the SPY kind of stuff. Okay. And, ah, we, we are, we just, ah, are trying some momentum plays.

00:57 Mm-hmm. Where in, ah, whenever, ah, the momentum is on the upswing, we are in the market, and momentum is downswing, we are out of the market.

01:04 Okay. Okay. So, that's a, that's a background. Ah, we are, ah, yeah, the plan is to size investments from our end.

01:12 Okay. Portfolio, ah, and maybe some friends if needed. Okay. So, that's, that's, that's where we stand. Ah, in that spirit, ah, we have tried, we have, we have played with futures and, and, and options, and, ah, volatility, VIX, ah, trading VIX and stuff like that.

01:29 Okay. But I think, ah, our, ah, for now, this is where we are. So, I send you, ah, a backtesting, ah.

01:36 Yeah. So, we can jump right in. Yes. Yeah. From, from our end, ah, we have sent you the backtesting, ah, push, ah, strategy that we have that we wanted to backtest it.

01:49 We have tried it on our own, ah, on, ah, some of the LLMs and QuantConnect and stuff like that. Okay.

01:59 Because, ah, we feel like, ah, things that, ah, a data scientist or somebody who's been doing background, backtesting probably can answer that question in

five hours.

02:09 We spent 20 hours. And after spending 20 hours, we decided we should not probably spend too much time on it.

02:14 And we'd rather let somebody else work with it and give us high fidelity, precise data that we can hang our hat on.

02:22 Okay. And, ah, that, So, so do you all want to get the execution bot made as well or do you all only want the signals, buy and sell signals?

02:30 Uh, we need it. We don't even need the signals. I mean, prospectively, you're asking future, you're asking bot signals.

02:41 That is less, I know that is less of a concern for us. That is step 10. Step 1 to 4 would be to backtest the strategy because we have a strategy.

02:53 We think it works, but, uh, we want to kind of, uh, put it through the rigor of the last, uh, X number of years in the market and see how the, how the results are with that.

03:06 So it's not a prospective future. I mean, that would be, we are not there yet. We are right now in the backtesting stage.

03:13 Because we can make some modifications to this. Uh, and our goal is to beat S&P 500 by 4 to 6% kind of stuff in a perfect world every year.

03:23 We are not trying to kind of get, like, tremendous returns. Okay. Okay. Okay. Got it. Okay. So, uh, Rupesh, you take over before I can present, uh, some of the stuff, uh, that we'll be doing.

03:36 Yeah. Yeah. What are your questions? Yeah. Yeah. So I've gone through the board strategies, so they're looking good. Like I have a few questions, like, uh, I'll just confirm those questions and I'll start working on it immediately.

03:56 So while, uh, for execution, while simulation and, uh, do I need to consider the commissions and slippage amount generally, or do we have the data?

04:06 Generally, it will be 0.05%, the slippage, resumptions, and commissions per trade. We don't have this.

04:17 Yeah, go We don't have this. We have, uh, the data, actually, so what we were using was, uh, you know, we tried using Yahoo Data, then we moved on to QuantConnect, which was providing data itself, um, and, uh, we were trying to, you know, get the code through Cloud, and, you know, um, the QuantConnect

04:43 also has an agent that generates code, so we are looking at that, but there's some inconsistencies, again, and our main problem is, you know, uh, when these, um, conditions, uh, you know, contradict one another, uh, the, uh, trading, again, you know, happens, the, um, um, when there is some contradicting

05:00 signals, um, so the, um, algorithm sort of, you know, overrides some of the stuff, so we want to make sure that, when the WIX is high, or those kind of few days where, uh, a lot of stuff happens, we want to make sure that, um, the, uh, signal is accurately tracked, uh, so that's what, uh, we have.

05:22 So, what kind of data, what are you you, you were questioning if we had the data, or, So, uh, usually clients, uh, give us the data, but we can get the data, I think, uh, this data would be readily available on Yahoo Finance.

05:40 Do you all collect, did you all collect the data earlier? Yeah, the problem with Yahoo Finance, I don't know how, uh, uh, about the fidelity of the data, okay, and so, particularly if you are interested, we have money, yeah, you know.

05:52 So, usually clients, like, we use, uh, so we are, uh, well versed with, like, data, DataBento API and stuff, so where we get the data from.

06:01 We can collect the array data ourselves, so if you can just provide us the API, because Yahoo Finance gives us the data, but it's not very reliable, so, uh, if, uh, you have a DataBento API, We don't have the API, so we've been using QuantConnect, uhm, I don't think they have No, no, they won't give

06:26 us an API directly, uh, so, again, if you want the backtesting to be, we do, uh, majority of our backtesting from the scratch on Python, otherwise trading you and all is of course there, but for a strategy like this, we would want it to be done from the scratch on Python, so that we can add more and

06:42 more layers to So, yeah, that's where we'll need the physical data, you know, so, we need to get the data like either it's an API, a free API like Yahoo Finance, or it's like a, uh, API like a QuantConnect or, uh, sorry, API like DataVenture, and it's not the, I mean, we do this all day long, we connect

07:02 , we collect tick-level data also, this is just the daily data, so it's a more simpler data and, uh, much less expensive data to even get.

07:07 We deal with a lot of tick-level data. We'll let you get the data, we don't have the data, we've been, uh, we tried, like I said, Yahoo and we realized it's not as accurate, then we went to QuantConnect, uh, based on our, uh, for us non-developers, uh, QuantConnect, uh, seems to be a reasonable place

07:30 for us to get the data, and it does automatic Python coding kind of stuff, so it's like, it does, we are not coders at all, but it's been running with this new change, new change over the last couple of months.

07:42 So, QuantConnect, uh, QuantConnect lets you download the data also? No, it doesn't, uh, I, I don't know, it's like, there's no download.

07:50 There's an option for, uh, downloading, I think, they keep, they have APIs

integrated into the system, which I don't think they are able to sell to others, you know, so.

08:01 So, QuantConnect. We haven't, so we haven't cross-checked it, but one of my team members maybe sent us a data like this, uh, it may not, uh, I mean, I haven't, uh, personally, me or Rupesh haven't personally cross-checked it, but, uh, we would get a data like this from Yahoo Finance, and we have to check the accuracy of this, like, we can send you the data, and, uh, you can check the accuracy of this, and, I mean, we can check it ourselves, but, uh, for more reliable data, I would suggest DataBender.

08:25 It's anyway a daily data, so, uh, it's not going to be expensive at all, like, uh, something like, uh, what do you say, a tick-level data would be extremely expensive, this wouldn't be expensive at all.

08:34 So, yeah, uh, I'll, yeah, so we, I'll send it to you, and then we can cross-check, and then we can, uh, move ahead from there.

08:45 Okay. So, you said, I'm sorry, DataBend, you said? I'll cross-check with the team where they got it from, but it's definitely not, uh, DataBend, it's not from DataBend.

08:55 Okay, no, no, because we, we want, again, you know, Yeah. Uh, so, so, when we are, you know, putting, Yahoo Finance is good for a, you know, college product, project or something like that.

09:04 Correct. When you're trying to put real money, you need, um, accurate real-world data, so, with the API or, you know, or you can get and we'll pay you or something like that.

09:17 Perfect, perfect, perfect. That sounds good, that sounds good. Okay, so, um, that's the first part. Okay, Rupesh, can you take over about the strategy, any questions you have about it?

09:26 Yeah, like, uh, Sudhir mentioned regarding the conflict resolution. So, what I thought, uh, Sudhir is like, the precedence rules will be, first priority will be given to the, we'll switch, obviously, next, the defensive trim, where RSA is greater than 75.

09:43 Next, the overheated trim. How about this? Like, let's say, let us take an example. RSA greater than 75 and SPI closes below 50 MDMA and avoid anti-spikes 31.

10:02 VIX would be the, VIX would be the first hierarchy. VIX would be the kill switch, Kill switch, basically. VIX is number one.

10:11 Once kill switch is there, nothing else matters. Once kill switch is not there,

then, ah, then your, ah, everything else comes into play.

10:20 Usually when SME is less than 200, ah, when, ah, SPY is, ah, RSI won't be 75, usually, would not be 75, but, but I think that's a third, ah, that the SMA, in case there is a conflict between these two, the SMA wins.

10:35 Yes. Because, because when you are in full bull mode only, when you're 100% in bull mode, to pull back is when RSI comes into play.

10:47 So that would be the third hierarchical thing. Thank you. So the first hierarchy is Kill Switch, second hierarchy would be SMAs, the third hierarchy would be RSI.

10:56 The main, the problem with ALGOS, with, ah, with the coding, ah, errors we have run into, not being coders, ah, is, ah, when, ah, when, ah, when it tries to, so you should do a state-based, ah, analysis, not based on the analysis because of the state-based is, ah, say, your, your, your, ah, SMA, 50-Day

11:21 Moving Average, has breached to the downside, for example. So you're only 50% in, ah, in, ah, the Uprobe currently. And then, when, ah, next day, it's still less than 50%.

11:35 So you don't re-balance every day, you wait for the next signal, either to breach, is it to go up, so that you buy into, ah, into 100% range, which is, it, it, go, then, below SMA 50, you sold it.

11:50 So next day, the day after, every day, you don't re-balance 50%, but you wait for it to either go higher than 50-Day Moving Average for a couple of consecutive days, then you buy, then go back, you know, into full bull mode, or, it is the 200-Day and you sell everything kind of stuff.

12:08 So that hierarchy gets confused kind of stuff, we have seen that make a couple of errors because of that. The, the next one error, if you want to make notes, is because we have run into this.

12:19 The other error we have seen is, You asked about slippage, so intraday versus, ah, end of the day investing, so I think, ah, I think to keep it simple, end of the day is reasonable, ah, ah, to, and make decisions based on that, ah, and the next day would be like 30 minutes after opening or something

12:41 like that, ah, whatever data you need, like we said, we can look into getting the data, you guys can figure out where to get the data and let us know the charges, but, ah, in the meantime, that would be what, next day morning, 30 minutes after opening would be reasonable for now, but, but the hierarchical

12:56 conflicts, those are the couple of hierarchical conflicts we ran into. The third one, I don't know if I wrote there or not, ah, the third, the main hierarchical conflict

we get into is, we should have written on that one, if it's not written, we'll share it, ah, ah, the, when you're going, when you're

13:17 , ah, in, ah, in cash, when the market momentum is on the upswing, you breach the SMA200 first usually, and then you breach the SMA50, ah, moving average.

13:30 So once you breach SMA200, the, the re-entry should be 100%, ideally, be 100% in, ah, the Upro, because its momentum is on the upswing, you want to catch that upswing.

13:41 However, ah, if you think of it while going down, we said 50% SMA50, ah, when it breaches, and then 100.

13:55 So when going up, it should be all 100%. Once it, once it breaches SMA200, kind of put that in the code, but it's, what it's doing is next day, again, it's, it's realizing the SMA is less than 50, and you're more than 200, so it's selling 50% next day kind of stuff.

14:17 And I think when we, when we put basically the state-based, ah, ah, analysis and not the regular analysis, it's, ah, it, it fixed that one also.

14:22 So those are the few hierarchical conflicts that Sudhir was mentioning that we ran into. And, and the main thing, fidelity of data, because the fidelity of data, because if you re-enter, like, four days late, when the momentum is upswing, that's like, ah, SPI, S&P 500 of, say, 4%, and that's like, Eupro

14:47 is like 10 to 12%. And that's a really good return for the whole year. It's, like, very important kind of stuff.

14:54 So the returns from, like, 25% will come down to, like, 14% in the back-testing or prospective stuff if that data is not, if that, even if you miss by a few days.

15:05 So the way, what we were doing is we were, we were doing, like, two, three different, ah, areas. We would check it in QuantConnect, look at all the trades.

15:14 Put them somewhere else in a different algo stuff and cross-connect both. And then each one, we just put this for audit, one with the other, other with this one kind of stuff to kind of get it a little bit better and better.

15:28 So that's what we've been trying to do. And, yeah, after spending some time, we said, ah, maybe somebody who kind of does it a little bit more on and off would be better.

15:39 Okay, gotcha. So, like, ah, if you have the results in the code, like, like you said, the QuantConnect and whatever you tried, you can feel free to share.

15:55 We'll basically get the understanding of all the issues we can address. Yeah.

Yeah. We'll be coding from the scratch as long as we can.

16:03 As long as we can write the logics very clearly, getting the backtest right wouldn't be an issue at all. The issue would be optimizing the strategy if that's where, I mean, that's where the main, what do you say, the layers of the strategy would be.

16:18 So, uhm, so I have I think Rupesh was asking. I think I got answers for pretty much all the questions.

16:34 So maybe I'll take you all through a couple of, uhm, the way, our way of working, you know, a couple of files that I can just, uh, see so that you understand.

16:43 So, uhm, I won't take you through a tech-level data backtesting and stuff, so this is probably a relevant, uh, data for you to see.

16:50 This is, like, an end-of-the-day result where we are checking 1,000 stocks at once. So we did this for a big fund where we are looking at every single day, uh, we are looking at three kinds of indicators.

17:01 One is a weekly momentum indicator that we designed in-house, a yearly momentum, and the third is a liquidity-based indicator. Okay, so what we do is, on the basis of that, we invest in, like, a maximum of 15 stocks daily.

17:14 These are the 15 stocks that we come in the radar. We invest in a maximum of 15 of these stocks on the basis of certain, uh, additional parameters and the amount of money that we invest and stuff, etc.

17:26 These are all the detailed stuff where we take all the transaction cost into account. The, we invest a certain amount in every stock every day with a certain logical calculation.

17:36 We even hold the stock, uh, hold the cash in a that stock. So, it's a very detailed portfolio analysis. So, in the end, what we do is, for an entire portfolio, we calculate the actual result.

17:47 You know, and in the end, like, for example, for this strategy, we get, uh, around, uh, 24.7% CAGR in Indian market in the space of 7 years.

17:57 So, uh, we can go into a lot more detail. Currently, you are, uh, your requirement Not an entire portfolio where you want to, uh, go through an entire market, but would that be your, uh, future priority?

18:07 Yeah. We are not in, uh, we are not, uh, uh, it's like scalping, I think, uh, it's like, uh, No, this is either way, like, uh, anyway, we are having one trade at a day max.

18:28 Right, right, right. Yeah. Got it. Got it. No, we are not in that. Yeah. So right

now, I think our strategy is to, again, you know, uh, the leveraged, um, ETFs, there's quite a bit of upside.

18:41 And so is the downside is much more. So we want to preserve it. And we already invested quite a bit in these leveraged ETFs.

18:49 And we've, uh, we felt the current punch through 2022. Fortunately, the markets are up again. Uh, so the buy and hold strategy actually works well, if you have the nerve to hold it through the downturn.

19:03 And sometimes the downturn, unfortunately, the downturn 2022 was, you know, close to 30%, but if it goes even lower, then, you know, you're almost, your portfolio is wiped out.

19:13 Got it. So, so to answer the question Thank you. You know, right now our focus is on what are the signals that we can utilize for a proper exit.

19:23 Again, you know, you don't want to exit, you don't want to leave money on the table, but at the same time, I, you know, you don't want to exit too late.

19:31 So we're trying to look at those signals. But again, you know, once we feel comfortable with that, obviously we'll try to expand again, you know, but.

19:39 We want to hone on, you know, our, at least me and Ravi, we have been investing in leverage stuff. Again, we have set options again, we have done options on the leverage GDFs again.

19:49 So that seems, and we feel comfortable again, you know, that seems to be our wheelhouse. Obviously there are, you know, a million ways to make money and a million ways to lose too.

19:58 Okay. We, uh, so this is, this is what we, we have decided our field is going to be, this is what we understand.

20:05 Okay. So the only point being like, uh, this is from a data science perspective, this is how many, how much details we'll be getting into, like whether, whether it's transaction costs or whether it's a stock price that's calculated or, you know, so the end result will be a little bit more pessimistic

20:21 than the actual, uh, market result. You know, like, we like that instead of, uh, showing higher returns and then later on, uh, clients having to see, even though our backtest won't be, there won't be any flaws in the backtest, uh, we like a complete pessimistic result, like, at least in a, uh, in a tick

20:37 level data, there's a lot of slippage and stuff that occurs at the end of the day data. These things are, uh, anyway, the backtests are pretty much very accurate.

20:46 You know, so this is. Which is a very valid point again, you know, I think

most of them look good on the paper strategy.

20:51 So then once you start trading again, you see the slippage and one major factor that we haven't added is the taxes again, you know, unlike, um, in India, uh, here, short term, again, you know, we all follow, we, we follow the maximum tax bracket.

21:05 So if you're talking about short term capital gains, so, uh, the, probably the best way for us to run this strategy would be in a non-taxable account.

21:13 Uh, so to start off. But when you add taxes, um, yeah, the returns will be, you know, not that strong.

21:22 So will you be considering putting your money in Dubai or something? Dubai? We haven't gone that far Okay. Okay. Okay.

21:30 No, I have, I have people around who do that very often because they have their companies there as well, but, uh, that's a good, that's a good hack.

21:39 Okay. Uh, a couple of, like, I can only find a sports prediction dataset. I'll give you a relevant dataset. Rupesh will send it to me later.

21:49 Okay. So just try to get the reference. Uh, I'll explain it very clearly. Uh, no need to get into the details.

21:55 Uh, it's a, it's a backtesting, like any backtesting could be for any dataset in the world for, uh, sports, stock market, anything.

22:03 Just see. See the reference here. Uh, one second. Uh, just look at the number. The backtest over here, for example, says that it's a minus 5% return.

22:17 Okay. I'll tell you what I'm trying to show over here. Uh, what we do is, this is something that, uh, clients love a lot, is that you can come up with your backtesting.

22:26 Uh, you and I together can come up with the parameters that we think really work. The parameters in stock market could be, for example, it could be day, it could be month, it could be hour, uh, in terms of, uh, other strategies.

22:38 It could be RSI. It could be any kind of indicators. It could also be like, uh, like a holiday, like, you know, uh, holiday or a big market crash, et cetera.

22:48 These could be the kind of features that we put in. On the basis of that, we can figure out when does this strategy do well.

22:55 Okay, and we will figure out at least a million possibilities. Like, if I show you, uh, we'll try to come up with all possible combinations over here.

23:07 Okay, uh, which, let's say over here we have taken around 80,000 combinations. Uh, question. Is this something like a Monte Carlo simulation or what?

23:14 No, it is not. We are not. What we do is simulation as well, but this part is only pattern recognition.

23:20 Okay. Okay. Every single pattern. So, uh, do you all understand a little bit about sports? So, maybe I can give you context.

23:28 Sure. Okay. I'll try. Okay. Regardless, I'll try to explain. Okay. Like, for example, uh, we've tried to find all possible, uh, scenarios that we could over here and what we have done is, we have figured out, I will I'm giving you in layman's terms, that's not the way we actually figure out, but let's

23:43 say, uh, profit is the only thing that we are looking at. Okay. Profit mean is the only thing that we are looking at.

23:48 So, we have arranged this in descending order and assuming this is the stat that we really, final stat that we look at and we figure out a pattern, a pattern that says when the fighter X has a stance called a switch and when our ML model says that our probability is less than 0.6 and when the opposition

24:06 fighter is, uh, has played more than 4.5 matches and his win rate is more than 0.5. In this scenario, our win rate is 84% and we have a profit of around 110% per game.

24:24 Okay. A profit of 110% per game. Now, this, these kind of patterns are impossible to catch by a human eye.

24:28 What we do is we take all the possible scenarios, we define the bins, for example, we, we'll define the bins according to, with you, like, the bins could be RSI greater than 70, between 30 and 70, less than, uh, 30, and we'll come up with combinations, as many combinations.

24:45 For example, when RSI is less than 30, and when it is, uh, a Christmas, or, to give a stupid example, and when RSI is less than 30, and when Donald Trump wears, like, a red pant, for example, the stock market goes up by 50 percent.

24:58 For, okay, for this, the very important part is the, uh, parameters that we define over here. If these things are not good, uh, the patterns won't come out to be decent, but if we together come out with, like, uh, 10 to 12, that's the maximum computation power that we worked with, okay, 10 to 12 parameters

25:14 , then we come up with very decent strategies. Like, our, once we come up with a strategy, that can come up with, like, an ROI of, what, 1 percent, 2 percent, 5 percent, 20 percent, with a win rate of, uh, 50 percent, 55 percent, we'll find pattern recognition tools that will get us, like, an ROI for

25:30 , uhm, it will, of course, invest lesser, but it will be a higher return. And these things can be cross-checked by human eye, like, I'll just tell you, uh, this is the

pattern.

25:40 You can go and cross-check with yourself just by putting some, certain, uh, simple filters in your Excel and you'll figure out, okay, this is actually doing well in the past.

25:48 So, there's, we try to stay away from machine learning, like, we have machine learning models, but we try to stay away from machine learning models till the time we actually get a very decent result statistically.

25:58 We like doing the math. Once we do the math, we are, uh, more than happy to go to the ML model as well.

26:04 So, how do you prevent over-fitting into this again, you know, when you're trying to sink a dollar into Trump's red pant again, you know, I mean, that's all you need to do.

26:11 You just need to look for patterns that open up again. Correct, correct, That's, that's, uh, you asked for a great question.

26:16 For that, we do have, like, uh, I told you, right? Like, in terms of layman's terms, we just took the pattern as, uh, profit, right?

26:25 We would be having, we have a set of 10 tests that we go through. For example, we will, uh, only take the maximum, uh, let's say, 80%, we'll cap the 80% of the profit, for example.

26:36 We'll take the longest losing run, okay? Similarly, we have 8 to 10 tests that will make sure that there is no over-fitting, okay?

26:45 Like, uh, the pattern, there are multiple things. For example, why we won't go through this pattern, this one? Because this count is over-fitting.

26:52 Only 33. You understand? Now, this count has to be above a certain range that we define. This has happened only 33 times.

27:01 So, for example, our threshold would be that the count needs to be at least 500 for us to believe that pattern.

27:09 Okay? So, now that Trump thing won't happen like too many times, right? Similarly, there are 10 tests that we have written down That will make sure that the overall overfitting thing doesn't, ah, exist as much.

27:19 And we can also decide together, ah, if you think, ah, how we can remove the overfitting. Got it. Very interesting.

27:29 Who are your clients? Okay. So, ah, we are, so the company name is Inside Fusion Analytics. We do have all kinds of clients like funds, institutional brokers, and individual traders as well.

27:46 Ah, lot of the times people come up with, ah, equity strategies, but for us,

our USP remains like a portfolio and a, ah, what do you say, options strategies like in a more dynamic market because that's where, ah, what do you say, handling the data and stuff becomes a little bit more difficult.

28:02 So, ah, we have all kinds of clients in those. But, we personally enjoy it when the statistics is more detailed, you know, plus, ah, we have only one client yet who wanted our ML model.

28:14 Ah, we think we can, ah, build some great statistics on that, but none of our other clients were, ah, interested in that because they just don't think, ah, it's reliable.

28:23 So, ah, so, yeah, and, ah, so, yeah, these are all the, like, I think. A lot of, 50% of our clients come from Upwork, 50% through Personal Connects and through LinkedIn.

28:34 Yeah, Indian market, ah, and foreign markets. As you know, I don't know if you looked up, me and Ravi, we both have Masters in Public Health.

28:46 Ravi has, Ravi, Ravi does not have the degree, but I do. In, in? Masters in Public Health. We did Biostats, Biostats, Masters in Public Health.

28:56 Okay, okay, okay, okay. Ravi was accepted into Harvard, ah, for MPH. Is that? Okay. Right, for Public Health. So, I accepted.

29:05 Did not go. Ravi rejected it though, they accepted him. I thought he dropped out, like, in the, just on the last day.

29:12 They accepted, but Ravi rejected them. Okay, okay. So, just to give you all a little bit of context, like, ah, we are into exporting of pharmaceuticals, you know, so maybe Ravi would enjoy talking to my dad a little bit more.

29:24 He keeps coming that side a lot. So, he's into the business for more than 40 years. He would know a lot about, ah, medical stuff, ah, I am an actuary myself, ah, like, although I have never, ah, wanted to work as one, I like the more detailed data science fields.

29:41 But, yeah, my dad would, ah, love to brainstorm with you, ah, if there's some kind of synergy over there. So, the question is, again, you know, it's really good, very interesting, again, academically, ah, you know, we can chat on this for a few hours, but the question is, ah, you know, but that's not

29:56 the point here. The point is, again, you know, how well versed are you with the US stock market? And, you know, the stuff that you're doing, again, you know, how well do you think you're doing?

30:05 Can you apply it to our strategy? Again, how, how can we both be helpful to each other based on our strategy?

30:12 Okay, so maybe we are missing a couple of points. We do have expert algo traders on board who will, who also manually handle people's accounts.

30:21 We will also be having a consultation with them where you can actually go into the details, you know, where, so, this guy sits in front of the screen.

30:29 Screen for six hours a day for Indian and US markets both. Okay, so, if there is more technical details that you can go through, he is the expert.

30:37 I am, ah, I am a professor of statistics. I am the data scientist. I will be heading the data science department.

30:43 Rupesh will be, ah, a lead, like, ah, he will manage the project. But regardless, an expert on board with ten plus years of experience, he will come, ah, we can, ah, if you all want to breathe.

30:53 In storm and make sure there are some suggestions that he can provide. We are, ah, more than happy to do that.

30:58 Just one thing would be, he is not, ah, that well-versed with, ah, English. He is just a pure trader. He knows his thing.

31:05 Ah, so, ah, maybe the language barrier would be there. But we are more than happy to do the conversion for you all.

31:11 Translations. Thank you. Rupesh maybe can answer it. Ah, so, when you build a, ah, would you build a, ah, the back-testing model, ah, when you build it, ah, could we adjust the parameters on that to look at pattern recognition, like you said, for example, RSI, we want to kind of, ah, we, we put 75 RSI

31:38 there. That's somewhat arbitrary. Is it 72 versus 75? Ok, straightforward answer, straightforward answer, we, if you, if your requirement is, we'll give you, we have a web development team also, we'll give you a web application, a complete application, where you can play around with numbers.

31:53 You can tell me that I want to play around with this, you, you, but you can just make a note on day one about exactly what your requirements are and I'll be, get it made from the web development team where you can play around with your statistics the way you want and, ah, yeah, you'll get the result

32:06 as soon as you press enter. So, yeah, to make it simplistic. If you want to make it simplistic, we keep it simplistic, if you want to make it complicated, we are more than happy to add, as long as everything is very clearly defined, yeah.

32:19 And groupage or members of your team have experience with backtesting, building models, backtesting, like we are asking kind of stuff.

32:25 Yeah, yeah, we, not exactly, but you guys have reasonable experience.

Yeah, yeah, yeah. It looks like, I saw a prediction model, looks like, if you are able

to predict, uh, Southpaw versus, uh, left stance and right stance, these should be very easy, we are asking, probably, right?

32:41 Honestly, yes, honestly, yes, honestly, yes. Like I said, when it comes to, at least when it comes to backtesting for options or the portfolio data, there's a lot more thing that goes into account that we have to take into account.

32:53 But, yeah, this is something that we do on a, so we do get around 60 clients a month, we hope we reach a size of the team, uh, where we can actually serve everyone, uhm, so we do get, we have loads of strategies in the bank, you know, like, there's so much, we, uh, so for most, we do sign NDAs for a

33:13 lot, but for whatever we have not signed an NDA, I just want to take one month time to come out so that we can actually launch all of the, the MS products.

33:20 So, uh, that's where, uh, that's where we are, we are at, like, there's too much in the bank, we want to take some time out to just launch products, so we are taking much lesser clients in the last few months, but, uhm, but yeah, backtesting is something that we do on a daily basis.

33:34 And did you understand the questions we are asking? And we can, we can, uh, I can, we can summarize, uh, the strategy, uh, we, we verbally spoke about strategy, that's what there is to it.

33:45 There are other parts, uh, of the strategy, I don't know if I shared, how much I shared, they're like, there's a short strategy.

33:51 Again, once you do one part of the strategy, doing part two, part three, part four of the strategy, we have a short strategy, wherein if the market is going down, we buy, we, we buy, we short, uh, SPY kind of stuff, livery SPY, we short and stuff like that.

34:05 So those are all the stuff we'll share, uh, kind of stuff. So looking at this stuff, so if you are comfortable with the data, with the questions we are asking, what we ask is simple.

34:16 We want high fidelity reproducible data, uh, that, uh, that we, that we can look and understand and logically figure out if this is the way to go or not, uh, and maybe some adjustment of the parameters if needed.

34:30 At a later stage. So that is our ask. So roughly, how, how does it work kind of stuff? Say if we go with you guys, so how long do you, you, and you don't have to give an answer today, you can message me tomorrow.

34:43 Is it something that will take like, uh, 10, 20 hours to kind of create backtesting only, not the algo for trading in yet kind of stuff.

34:52 Those will be like later parts. But just to get a backtesting done for us to

look at the data and stuff like that, just take a look, uh, figure out, uh, uh, timeframe, timeline.

35:02 Is Ravi, do you want to share the rest of the, you know, algorithm again?

Yeah, um, what do you want to do, what we can do is, can we, uh, connect over a WhatsApp, WhatsApp, uh, over a WhatsApp group?

35:12 Like I'll connect you with the team, the communication will be much faster, quicker, and Rupesh can directly answer to you.

35:20 Okay. Okay. Can I take down your WhatsApp number? Yes, yes. Mine, uh, both are numbers you can share. Mine is, uh, you should do plus one for US.

35:33 It's, uh, 414-514-4227. And my number would be?

35:46 Just, uh, I'll send him a hi. Like, just tell me if you can, uh, get it. Okay. Uh, okay. Yeah.

35:51 What's your number, Sudhir? 574-210-5747.

36:03 Yeah. Just, I'm sending both. I'd, uh, plus 174-210-5747.

36:15 No, no, plus 1-574-210. Okay, okay. One second. Ravi, did you get my message?

36:30 Okay. Got it. Okay. So, I've sent both of you all a message and, uh, I'll add you all in a WhatsApp group and, uhm, yeah, we, uh, so, we have some small formalities, uhm, you all can submit the requirement doc, you know, you all can just sign it so that we are all clear about it, uh, maybe we can keep

36:48 the front-end part and everything later. We can see the back-testing result at the start and then you all can play around with it, uh, we are more than happy for that.

36:56 And, yeah, you'll, uh, plus, uh, if you all want, uh, would you like to connect with the algo trader to have a detailed discussion?

37:05 Or that's not, maybe later. Not yet. I'll talk to Sudhir, but I think, uh, the main question would be back-testing results based on what we have.

37:13 The question is, what we're trying to answer is, we have this strategy. Is this a valid strategy or not based on real-world data?

37:22 That's the first question, you know. So, that's what we're trying to answer. Again, obviously, from there, we go again. If that's not working, then how do we optimize it?

37:30 Or even when it's working, how can you make it better? But we don't want to overfit it. Again, that's the problem.

37:35 You don't want to look at, you know, past 15 years, obviously, will not be like the next 15 years. So, we want to have, like, an agenda.

37:42 Just, sort of, a little bit of loose hands. Again, you know, we know where we are. Again, you know, just a little bit.

37:47 We're not too greedy. Again, you know, we don't want to try to hit every ball to a six. Again, you know, as long as, you know, we maintain a consistency, again, 15-20% kager, again, over a period of time.

37:58 This is a 10-15 year game that we want to be in. So, over, you know, over 15 years, again, you know, will you empower I don't care.

38:06 So, that's what we want to do. We don't want to lose money, but, you know, keep chugging along. Okay, okay, okay.

38:14 Got it. So, regardless, we'll get you all all the details of what we have. And then Rupesh will take you all through the next steps.

38:24 Okay, and another thing, if you all enjoyed, please leave back a feedback. It means a lot to us on our part.

38:30 Yeah, absolutely. So, I kind of want, trying to wrap my head around. So, what's the framework like? Again, you know, are you talking about, you are part of, you are the team, you run the company, or like, how does it work?

38:38 I'm the founder. I'm the founder. One second. I think you lost me. Hello? Hello, we can see and hear you.

38:50 Uh, sorry. Hello? Okay. So, sorry. Okay. So, uh, I'm the founder of the company. Uh, Rupesh will be leading the project, and, what do you say, the analysts under him will be the ones that will be completing, uh, the stuff.

39:05 Or, if Rupesh needs, he'll be adding on to more people, but all of those people will be, Hello? Hello, Anmol?

39:09 Uh, hello? Can you hear me? Ravi? Yes. Yeah, yeah. Sorry, I have to get off. Again, you know, I have one more call.

39:15 Okay? Okay, okay, okay. Okay. Okay. So, I'll talk. I'll talk. I'll close it here, Sudeep. Okay, I'll close it, okay.

39:20 Hey, thanks, Anmol. Really nice talking to you, okay? No worries, no worries, no worries. It was really nice talking to Okay, take care.

39:24 Thanks again. Bye. Okay. So, I'm the founder. Rupesh will be the one that'll lead this project. If he needs, he'll add on to the analysts.

39:34 If he needs, otherwise, he might complete it on his own as well. He'll, we'll definitely be adding the full stack guys that'll, uh, complete, uh, the web development.

39:42 Just in case that's your requirement. And, uh, yeah, like, if you all need, we'll add the algo traders on board as well.

39:49 So, yeah, that's how we'll go. Okay. Yeah, we will make, whoever is working, we'll pretty much make things clear to you all.

39:57 Okay, fair enough. So, we look forward to further communication, um, also on WhatsApp also. And this one to figure out the time frames and, uh, rough, rough, rough, amount of, uh, uh, project, uh, uh, and stuff like that.

40:11 Okay. Okay. Okay. Thank you. Uh, thank you so much. I really, uh, I'm looking forward to the project and please don't forget the review on Upwork.

40:18 Okay. Absolutely. Thanks so much. Thank you so much. Yeah. Bye.

Meeting Recording - March 1, 2026 (iphone 115 is Ravi)

00:00 iPhone (115): We are on. I think he was trying to figure out a way to join. I just texted him to join the WhatsApp group.

00:11 Insight Fusion Analytics: Yeah, I've sent him, I've sent him as well.

00:40 iPhone (115): I don't think I'll show you.

00:52 Insight Fusion Analytics: Hello, Rupesh, are you here? Rupesh, you are on mute.

00:57 Rupesh: Okay, okay. Hi,

00:59 iPhone (115): Ravi. Hi Rupesh. So we were, we were kind of trying to do our background little bit, cleaning up the profile a little bit.

01:08 iPhone (115): But, uhm, and I know you texted Anmol Singh that you already did the background. Not now, like five days ago you texted saying you had mapped out everything.

01:17 iPhone (115): I was going to text yes and I got tied up, but when you text him again it reminded me and we kind of moved on kind of straight away.

01:25 iPhone (115): So that's where we are. Uh, let's, uh, I just texted.

01:28 Insight Fusion Analytics: So basically kept a framework ready from

01:31 iPhone (115): which,

01:32 Insight Fusion Analytics: with your system. Suggestions we can go and, uh, come up with results that

01:36 iPhone (115): will

01:36 Insight Fusion Analytics: actually be like production level. So yeah. Hi Sudeep. Hi there.

01:45 Sudhir: Hello. Hi there.

01:46 Insight Fusion Analytics: Hello. Hello.

01:47 Sudhir: Hello. How are you doing?

01:48 Insight Fusion Analytics: All good. All good. All good. We're waiting for you.

01:51 Sudhir: Okay. Okay.

01:51 Insight Fusion Analytics: Yeah. Thanks. Okay. So, yeah, finally, we guys are here after a couple of weeks. Uh, let's see. Rupesh will try to present.

01:57 Insight Fusion Analytics: Let's see if, uh, how we can, uh, make them take it to a level where it can actually be deployed in the live market.

02:05 Insight Fusion Analytics: Okay,

02:08 Rupesh: I'm sharing

02:09 Insight Fusion Analytics: screen. Okay.

02:13 Rupesh: Yeah, so from the two strategies, VAM, VAM split and predatory, so I made a state machine diagram, state machine like from each state how can we go to each state.

02:25 Rupesh: Total, there are seven states here. One is Bulls 100.

02:31 iPhone (115): Your

02:31 Rupesh: screen, ah,

02:32 iPhone (115): your screen, ah, sorry. Rupesh, I don't know if you're sharing the screen or not. It's okay if you're not sharing.

02:37 Rupesh: But we are

02:37 iPhone (115): not seeing any

02:38 Insight Fusion Analytics: shared

02:38 iPhone (115): screen. We are not seeing.

02:40 Insight Fusion Analytics: No, I can see your screen.

02:43 iPhone (115): Oh, sorry. Oh, I just found it. Thank

02:47 Insight Fusion Analytics: you.

02:49 iPhone (115): See, that's, we are too technologically challenged, as you can see.

02:52 Insight Fusion Analytics: No issues, no issues.

02:55 Rupesh: Okay, so, uh. So, basically, I made states, Q-States, 7 states, according to the two strategies, and then signal hierarchy using the first priority to kill switch, second priority to SMS signals, and third priority to RSI.

03:12 Rupesh: And execute. Execution, as you said, in the last meeting. Daily, this, uh, all this data will be checked at close, like around 4 p.m.

03:20 Rupesh: Then, next day. After, uh, uh, next day, T plus 1, 30 minutes after open market, execution will be happening. Currently, I took the.

03:29 Rupesh: The, uh, slippage commission, these values, but, uh, we'll change according to you as per your suggestion.

03:37 iPhone (115): Sure.
03:37 Rupesh: Sure.
03:37 iPhone (115): Thank
03:37 Rupesh: you. Show
03:37 iPhone (115): me the states. Sorry, show me the seven states. Can you scroll down a little bit once? The seven
03:42 Rupesh: states? Yes. One
03:44 iPhone (115): second.
03:45 Rupesh: Is it, uh, clear? Should I zoom in?
03:50 iPhone (115): Yeah, no, this is good. Give me one second. Bull trimmed. Defensive spike, 50%.
04:01 iPhone (115): Defensive QQQ. Wow. Oh, it's 25%, bro. Okay. Defensive both. Okay. Cash.
04:13 Rupesh: Represent.
04:14 iPhone (115): What's your rate? Short. Cash. Short. Okay. Kill switch. Okay. Short is, uh, okay. Seventh state. Did you have more signals for?
04:25 iPhone (115): Seventh state. Short. When you're going to trigger number seven, can you scroll down once? Yeah. Kill switch. Priority two SMS signals.
04:36 iPhone (115): Priority three executed rules. OK, but I think my only question is that. Rule number seven,
04:42 Rupesh: uhm.
04:44 iPhone (115): Yeah,
04:44 Rupesh: uhm,
04:45 iPhone (115): short, very short. Did we figure out the steps for that? When and how kind of stuff, uhm? And how much of a short we should be?
04:56 iPhone (115): Did I share? Did you go I'll let you continue.
05:00 Rupesh: Yeah, we will go from cash state to short state. I'll explain in this diagram. Okay, I'll use decision tree one second.
05:22 Rupesh: Okay, one, uh, is it visible?
05:29 iPhone (115): No. I'm sorry, Ravi, I, Ravi,
05:34 Sudhir: are you, uh, using your phone or computer?
05:38 iPhone (115): I connected my phone to my computer. Okay, I'm unable to see, I'm
05:44 Sudhir: using my phone again, you're welcome.
05:49 iPhone (115): I'm connected to a big monitor,
05:52 Sudhir: Okay, that's

05:53 iPhone (115): fine. But are you seeing the picture, Sudhir, or no? You just can't read it, right?

05:58 Sudhir: I guess it's kind of, yeah, exactly.

06:00 iPhone (115): Yeah, because the screen is too small, yeah. Yeah, I was gonna ask. You zoom in. Sudhir, you can zoom in with your pinch.

06:06 iPhone (115): If I pinch my fingers, I'm able to read it.

06:09 Sudhir: Okay, so

06:09 iPhone (115): that should be

06:09 Sudhir: fine. Actually. Because it's a zoom call, let me just log on to my computer. Okay, that's fine. You guys can carry on.

06:16 Sudhir: Rupesh, go ahead.

06:18 Rupesh: Yeah, so from this casted we will go to short state. You see this one line outgoing, right, remaining or incoming from the

06:32 iPhone (115): casted.

06:34 Rupesh: So, we will say that short entry conditions and from casted we will go to if the short entry condition conditions are met, we will go to the short state.

06:46 Rupesh: And again, from short state, if there is exit condition met, we will go from short state.

06:57 iPhone (115): That we are not set up yet, that we are not set up yet, right? Or did you? OK. Well, I don't know if I, I might have shared on day one, uhm, the.

07:22 iPhone (115): Short state rules,

07:24 Rupesh: uhm.

08:03 Rupesh: That's the way it's always been. This is the re-entry logic, from Cache State, like if you are in. Cache State, we will check the kill switch, and first, after kill switch, second, according to the priority order, we will check the SMA, if SPI is greater than 200 SMA, yes, we will check QQQ, if no, we

08:32 Rupesh: will extend cache, if QQQ is also ticked, we will extend then we will check for Wix, yeah, if Wix is also correct.

08:39 Rupesh: Here, uh, uh, we need to take a, we have three options, like I need your help here. Can you go up, can

08:45 iPhone (115): you go up, can you

08:47 Rupesh: you

08:47 iPhone (115): go up, so it's 5 more than 200, kicking 1 SMS. No, this one

08:52 Rupesh: that

08:53 iPhone (115): is that is the the hierarchy for that one is remember and we can get up. Remember, we are 75%. Spy product and 25% is QQQ product, right?

09:07 iPhone (115): So. Spy product is Upro. TQQ product would be
09:11 Rupesh: TQQ, right?
09:13 iPhone (115): So, so once a spy is more than 200, uh, answer is yes, right?
Then, thus, the U proportion should be almost equal right?
09:24 iPhone (115): You understand what I mean? Because the U proportion,
which is 75%, is dependent only on SPY. It's not
09:30 Rupesh: dependent on PTP.
09:31 iPhone (115): So in
09:32 Rupesh: that,
09:32 iPhone (115): that flowsheet is wrong though. If you go up, the
09:37 Rupesh: flowsheet is
09:37 iPhone (115): asking both conditions to be met, both SPI and QQQ to be met.
For this, for the 75% you pro, you just want SPI to be met for the time 25%
09:49 Rupesh: QQQ
09:50 iPhone (115): or
09:50 Rupesh: TQQ, you
09:51 iPhone (115): want QQQ because that's the underlying, the signal for TQQQ
is, ah, is,
09:56 Rupesh: ah, is
09:58 iPhone (115): that right? QQQ, yes. QQQ can't be the signal for U-PRO spy
product also. So that
10:04 Rupesh: needs to be fixed. OK.
10:11 iPhone (115): And then, uh, for each one, for each part, then for, once a spy is
met more than 200, then you check the results.
10:19 iPhone (115): If it's less than 30, then you, you enter.
10:25 Rupesh: Okay. So. This one is, yeah, each
10:29 iPhone (115): one will
10:31 Rupesh: have its own signal. Okay, what will be the allocation?
10:38 iPhone (115): Uh, like, uh, SPICE rate?
10:39 Rupesh: 75
10:42 iPhone (115): DUPRO. 75 DUPRO, 75, that was the initial, if you see bull, that
was
10:46 Rupesh: initial
10:46 iPhone (115): 75, 25, that's the same one.
10:49 Rupesh: Okay, okay, bull 100, shit. Okay, so here the option will be
OpsGenie, okay. I got it on

11:07 iPhone (115): Is
11:09 Rupesh: it visible?
11:11 iPhone (115): Yeah. Pull notification. No, I know I can see it.
11:24 iPhone (115): It's showing Bulldog Defensive Yellow, Priority 2 SMA Breach,
11:28 Rupesh: uh, yeah, as I said, like, uh, I can see it. I have given first priority to CoolSwitch, next, uh, SMA, next RSI.
11:38 iPhone (115): Yes. I can't see the whole picture. Are you trying to show me below this? I can only see, uh, now I can see the picture at the bottom.
11:48 iPhone (115): The yellow one was the flow sheet was not completely visible. Now it's visible. So prior to SMA breach less than 50.
11:56 iPhone (115): SMA 50% UPRO, yes, QQQ less than 50, Defensive Trim 50% DQQ, both. Less than 50 SMA. What is both?
12:09 Rupesh: Both in the sense both SPY and QQQ. Oh
12:11 iPhone (115): yeah. Okay,
12:12 Rupesh: obviously. Both underlined.
12:15 iPhone (115): Got it, got it. SPY more than 50 SMA for today's record. Bye-bye QQQ. QQQ more than return on investment by RTQQ.
12:25 iPhone (115): Okay.
12:27 Rupesh: Yeah, if that. No SMS issues will go to RSA will check RSA.
12:32 iPhone (115): OK, I'm gonna hold 25% actually this. Buyback, no, no, OK. The sounds reasonable.
12:43 Rupesh: Sorry. That
12:45 iPhone (115): sounds good. Yes. This sounds good. This looks good to me.
12:51 Rupesh: OK. OK, like, ah, this one, the reentry logic I showed you now, I, that is here. Also, like, if both are greater than the 200 SMA and weak less than that tip, we'll go to 75 for Oakdaw and 25 for TPPQ.
13:08 iPhone (115): Uh-huh.
13:16 Rupesh: Okay, this is good, right? The decision tree?
13:21 iPhone (115): Yeah, yeah. But, but, but, again. Each percentage in that first box, SMA greater than 200, and, uh, uh, and, uh, QQQ more than, uh, moving average for Spy and VT.
13:38 iPhone (115): If you scroll down, come down a little bit. And the first blue box, or green box, you call it,
13:45 Rupesh: uh, the
13:46 iPhone (115): bottom
13:46 Rupesh: left,

13:47 iPhone (115): Spy more than 200,000. And QQQ more than 200, and Wix less than 60, go to Bull, right? But that one is for each part.

13:55 iPhone (115): The Spy. Spy more than 200, and Wix less than 30?

14:00 Rupesh: Yeah, yeah, we will check the wall daily

14:02 iPhone (115): for both. But if the QQQ is, is not there, but the Spy is there, you're supposed to buy Uproar. That's what I'm trying to do.

14:07 iPhone (115): You have to, kind of, both should not, They're too biased. Uproar, TQQ. So the Spy and TQQ should be individual for each one, not

14:19 Rupesh: together. Yes, yes, yes.

14:22 iPhone (115): That one needs to be fixed, right? You see that

14:24 Rupesh: first. Yeah, yeah, yeah.

14:25 iPhone (115): First

14:25 Rupesh: we must.

14:27 iPhone (115): Even if we'll fix it. Oh, oh,

14:30 Rupesh: oh, oh. Uh, yeah, so this is what I made, like a decision tree and state machine diagram, with the, uh, uh, strategies and states and, uh, priority order.

14:47 Rupesh: Any, uh, any input you want to give regarding the priority order, is it fine? Like, killswitch, SMA, NarrowMap? Parachain? Hello.

15:03 iPhone (115): Yeah, yeah, the only thing is it's a state rule, right? So today, for example, my question to you is. Today, if SPI is less than 50 SMA, OK, you trimmed 50%, right?

15:15 Rupesh: Tomorrow.

15:17 iPhone (115): Tomorrow, SPI is still less than 50 SMA, and it's more than 200. Would you apply now? Apply state-based logic and not trim it next day also, because the ratios tomorrow will not be, you know, it's not 50% exact, it's 49.5%.

15:33 iPhone (115): Or something like that. Would you trade to make it 50% next day? Or would you make it a state-based play wherein you wait for the next either up signal or down signal to check in?

15:49 Rupesh: Wait for, yeah, we'll wait for the up signal.

15:53 iPhone (115): Up or down signal, kind of

15:55 Rupesh: stuff,

15:55 iPhone (115): whatever, whether you need to

15:56 Rupesh: trim up

15:57 iPhone (115): or trim down or buy back, that's what you wait, right? You

16:02 Rupesh: wait two days, but

16:02 iPhone (115): it's not, next day you won't rebalance because it's for two days. 99.6% instead of

16:07 Rupesh: 50%. Yes,

16:10 Sudhir Vyakaranam: Once you

16:10 Rupesh: reach a

16:10 Sudhir Vyakaranam: state, you wait for the next signal, right? Until then, you'll be in the same position, right?

16:17 Rupesh: Yeah. Yeah.

16:20 iPhone (115): Yeah. Other, uh, other thing would be, which, uh, the whipsawing, uh, yeah, this is, this will prevent whipsaws if you wait two days to finish.

16:29 iPhone (115): But to go above 50 SMA, the last one month, if you see the market currently, uh, it has reached a 50% SMA like four times or five times.

16:41 Rupesh: So

16:41 iPhone (115): it keeps going a lot last one month. So that one, we'll have to fix it. We'll figure out later on if you're having trouble.

16:47 iPhone (115): So these signals look good to me.

16:52 Rupesh: OK. Yeah. What the heck? Yeah, so, I think that's all from my side.

17:12 Rupesh: The State Machine Diagram Decision Tree, and, uh, Reentry Logic, uhm. Architecture, yeah. There are edge cases also, like, uhm, if you want to see a few.

17:25 Rupesh: I'll show the critical ones. And that's it.

17:57 Rupesh: Thank Okay. Let's go to like a couple of things, one or two things. Let's say we are in a reentry logic and.

18:13 Rupesh: And the current state is cash from like, like you said, like from cash to short, we need to make an entry logic for the short entry and the short exit.

18:28 Rupesh: I think once we are done, all is to see if you all these, ah, things mostly are related to cache.

18:33 Rupesh: Once we have a short entry and short exit, all these, ah, edge cases will be solved. Like, we are in a cache state and SPOI is greater than 200 SMA triple QA.

18:46 Rupesh: SPOI is this, which is less than this. This one we already Uhm, same, it's just one parameter is greater than 200, other parameter at this state greater than 200, other state less than 200.

19:02 Rupesh: All these are the different combinations I made just to, uh, play around and see what from this state to. According to these parameters, which

state we can go.

19:13 iPhone (115): So it's you're, you're checking, you're changing the rule parameters to see if it is following the strategy. That's the edge case, right?

19:20 iPhone (115): You're just playing around with Spy more than 200, Spy more, QQ less than 50, what it is doing. In the

19:27 Rupesh: last

19:27 iPhone (115): column you're trying to see if the signal, if it's reading right, if it's following the hierarchy or not. Is that what you're showing me?

19:33 Rupesh: Yeah, yeah, Yeah,

19:35 iPhone (115): what is that? I see a conflict there. Is there a conflict? What is that conflict? See that on the row 15, go to the right side.

19:42 iPhone (115): Right the other side. 15 last last. Column. Row 15 last column.

19:50 Rupesh: Conflict. Yeah,

19:53 iPhone (115): so here. What is that conflict?

19:55 Rupesh: The exact question you're asking me now, like if SPI is greater than or equal to 100 and 200 and SPI is less than 50 SMA, then there is a conflict.

20:06 Rupesh: What should be the action taken?

20:10 iPhone (115): But, but we have the rules, right? In the hierarchy it's written,

20:13 Rupesh: the SPI is greater than, It should

20:15 iPhone (115): be 50%, it should be defensive, not, so SPI more

20:18 Rupesh: than

20:18 iPhone (115): 2, oh, SPI, this is no, no, no, no,

20:23 Rupesh: no, no, no,

20:24 iPhone (115): no, I understand. That is, uh, well, in the upswing, ups, based on where in the hierarchy you are. If you are in the downward trajectory, if it, uh, you know, if it is, I think,

20:36 Rupesh: I think that's

20:37 iPhone (115): one question we, we ask. Because that's a, that's a signal issue wherein, when it's, when you're 100% cache.

20:46 Rupesh: Yes. If

20:46 iPhone (115): Shai costs more than 200, you are supposed to go back into 100% bulk, even though Spy is less than 50, because you want to cache.

20:54 iPhone (115): The upstream, right? Right, so

20:57 Rupesh: that's why I

20:58 iPhone (115): think it's giving the conflict, because I say that I don't think that's in the hierarchy. It should be 100% bulk.

21:02 iPhone (115): 100% yes. 100% though 100% of SPI because that's a SPI rule. If you have similar for QQQ then it'll be.

21:10 iPhone (115): It won't be 100% for that 100% you pro rather. I'm sorry 100% you pro. Right, that's a. That's a EDF.

21:19 iPhone (115): Yeah,

21:21 Rupesh: yeah.

21:25 iPhone (115): Actually, I'm saying 100%. But I'm talking about that basket that 75% is our. OK, where is this pile more than 200 that should be?

21:35 iPhone (115): The whole pile is 75% you probe.

21:39 Rupesh: 25%. Sorry, it should

21:41 iPhone (115): be 75%. 100% you pro if you if you're talking only about you pro basket, that's 100% of you pro basket.

21:48 iPhone (115): But if you're talking about the whole stack. Strategy, then it's only 75%, right? So that I think. So one of the questions I have is, rather than making.

21:58 iPhone (115): Making it so complicated, should we go stepwise approach and take away the TQQ basket from the whole thing? And just keep it simple, because now if you get errors and stuff, it gets, because we are balancing both TQQ and YouPro.

22:15 iPhone (115): Because 75% we said YouPro Spy, 25% TQQ. Should we make it simple? Step 1. And just take away the TQQ.

22:23 iPhone (115): The TQQ basket from the whole thing so that you have less, then you can add, I think that would be

22:29 Sudhir Vyakaranam: a good way to deal with it because. I mean, you know, right now, you probably will stay 25% cash and 75% Euro, so it will be very clean if we can just do.

22:39 Sudhir Vyakaranam: So, you know, play with just uProbe and take the SPY as a signal and then we can do one more study with the same parameters.

22:47 Sudhir Vyakaranam: But use QQQ and DQQ as the, uhm, you know, ETF.

22:53 iPhone (115): You understand what we're saying?

22:55 Rupesh: Uh, you're telling to go with only UPR.

23:00 iPhone (115): Exactly. UPR is easy,

23:01 Sudhir Vyakaranam: right?

23:01 iPhone (115): UPR and

23:02 Sudhir Vyakaranam: SPR.

23:02 iPhone (115): Yeah. So there is saying that you have less things to worry

about if you do a stage 1. Don't delete what you wrote here, copy it into a different file and.

23:11 iPhone (115): Bull would be 100% you pro. There's no TQQ

23:15 Rupesh: and there's no

23:16 iPhone (115): QQQ signal. You take away all the signals. That way it's easy for you because you just start dealing with just you pro and spy.

23:24 iPhone (115): So if we don't like the numbers when we audit, when we look at the numbers, the numbers don't make sense.

23:30 iPhone (115): We can

23:30 Rupesh: catch

23:30 iPhone (115): errors easily because you know you can add this. Anyways, you can keep this file, but you just create a new file with just pure you pro 100%.

23:39 iPhone (115): Take away all mention about TQQQ and QQQQ. So that it's more easy for you.

23:46 Rupesh: Okay.

23:48 iPhone (115): Even the short strategy, we can

23:51 Rupesh: kind

23:51 iPhone (115): of you know, put it on the backburner. Just do pure three signals, RSI, 200, 50 day average. NUpro, just keep it simple.

24:02 iPhone (115): Let's look at the numbers and then we can. Let's light the numbers. Make sure it's doing what it's supposed to do.

24:07 iPhone (115): And then we go to the next step. Then we add 25% basket. Then there are two short strategies that we have.

24:15 iPhone (115): Uh, that we will, we can add and see because that will boost in 2020 and 2022. That will boost the returns kind of stuff later.

24:23 iPhone (115): But let's, let's see what, what

24:26 Rupesh: Pure,

24:27 iPhone (115): Pure Play does.

24:30 Rupesh: Okay. Does it

24:32 iPhone (115): make

24:33 Rupesh: sense? Yeah, yeah, got it. We won't be having this catch.

24:39 iPhone (115): Sudhir, are you there?

24:43 Sudhir Vyakaranam: Yeah, I'm here.

24:44 iPhone (115): Sudhir, I have to break away for, like, one minute. Why don't you carry on?

24:47 Sudhir Vyakaranam: Sure. So, Rupesh, you added to the short strategy as

well?

24:59 Rupesh: No, no, no. Uh, for short, yeah, I need short entry and short exit conditions as of now. It's just a straight ahead.

25:05 Rupesh: There are no entry exit conditions.

25:12 Sudhir Vyakaranam: You can

25:13 Rupesh: start and finish this on your own You don't have to do anything. You just Alright, any more? Thank you.

25:28 Insight Fusion Analytics: I don't

25:28 Rupesh: know.

25:29 Insight Fusion Analytics: Explain him.

25:30 Rupesh: Mr. Veer?

25:35 Sudhir Vyakaranam: Yes, Rupesh, go ahead.

25:38 Rupesh: Okay. So, we won't be having these three states, like I said, to go with only Upro. So, we won't be having this triple Q, we won't be having this

25:50 Sudhir Vyakaranam: both.

25:52 Rupesh: Yes. And also, uh, for now, we will be not considering the short state also. Yeah,

25:59 Sudhir Vyakaranam: let's take the short as well. We can add that, layer it, uh, later on.

26:04 Rupesh: Later on, okay. Okay. So the allocation will be at this state, all 100% to UPS. Pro. From this 100%, again, we'll trim the state.

26:23 Rupesh: Let me write down. Here, or one second. Thank you. After the rest of the session, we'll, go to 75%.

26:48 Rupesh: Here we'll go to 50%. Yeah, so, uh, these three won't be there.

27:03 Rupesh: Cash will be 100% as well. That's That's Okay, let's say we don't have triple Q, T triple Q.

27:20 Rupesh: Thank you. This bull 100 state will give 100% allocation to a pro, and bull trimmed state, it will be 75% and defensive, like, uh, if SPY is greater than 50, then we will go to 50% to pro.

27:32 Sudhir Vyakaranam: Yeah.

27:36 Rupesh: These two won't, we are not considering triple Q and short currently.

27:44 Sudhir Vyakaranam: We

27:49 iPhone (115): have to take away all those mentions about TQQ, right? You see that again? Line 1, line 2, line 3, there's still 25% TQQ.

27:57 iPhone (115): You have to correct all those things, right?

28:00 Rupesh: Yeah. I mean, uh, okay, fine.

28:04 iPhone (115): No, no, the UPRO is, uh, yeah, the PQQ mentioned, yes, that you should. You should clean up. Thank you.

28:33 iPhone (115): I hope you get it. You kept a copy of your original stuff, because your original stuff was really good.

28:45 iPhone (115): We'll just make it simple. Did you keep a copy of the original stuff, or no?

28:49 Rupesh: Yeah, I'll just, uh, undo it. It's fine. I've written it down in my rough doc, yeah.

28:55 iPhone (115): In your head, you wrote it kind of stuff. It's loud,

28:59 Rupesh: but

28:59 iPhone (115): it's good. Yeah. And then you'll, you want to change the advance also? There's QQQ.

29:09 Rupesh: Let's do QQQ. Uh. Pretty much the same, uhm.

29:23 iPhone (115): Yeah, yeah.

29:25 Rupesh: Yeah, that's

29:25 iPhone (115): it. This is simple. This is simple.

29:28 Rupesh: Yeah, yeah, simple. Should I? OK, I want the updated diagram also. Do you want the updated diagram also?

29:44 Rupesh: I'll just remove this, uh.

29:48 iPhone (115): You can do it slowly, so you don't make any errors because it's very complicated. It's funny, so it's easy for you to do it, but we can't double check so quickly.

29:57 Rupesh: Once you do it

29:58 iPhone (115): and submit, we can take a look.

30:01 Rupesh: Okay. Okay, fine. So this will be the states and the operator, if we are going only with Jupyter now.

30:08 iPhone (115): Yeah, just, just, this is like, Like step 1, step 2 would be adding TQQ.

30:12 Rupesh: Step 2

30:13 iPhone (115): will be, or step 2 will be adding short positions. Then we can add. TQQ will just rev up whatever results we get here by X, by a factor, because TQQ have done well in the last

30:23 Rupesh: 15

30:25 iPhone (115): years compared to. So when we add TQQ, it will always be better than what it is so we can always have it last first.

30:33 iPhone (115): This one, this result should at least beat the S&P 500 at a minimum. Hopefully.

30:40 Rupesh: OK. Okay, uh, with these parameters, only with you, bro, I'll do, I'll do update the diagrams and do backtesting and next you want to add in step 2 the, uh, second instrument, J triple Q.

31:05 Rupesh: Thank

31:07 iPhone (115): you. Sure.

31:10 Rupesh: OK, you

31:10 iPhone (115): have two short strategies you can add that. OK. What's the timeframe for this?

31:23 Rupesh: Uh, 2011 to 20, uh, message,

31:28 iPhone (115): yesterday. How long will it take for you to do this?

31:32 Rupesh: Uhm, I'll give it like,

31:43 iPhone (115): And you'll also double-check for any errors and audit it before you send it or after you send it. We can check it.

31:47 Insight Fusion Analytics: So he's basically created the entire framework already. He has a, but for that we need the data also, right? So he

31:53 Rupesh: is, yeah.

31:54 Insight Fusion Analytics: Use the data and, uh, yeah, can you show the backtesting result? So, of

32:00 Rupesh: course,

32:01 Insight Fusion Analytics: yeah. We need to change the data in the, in the code and, uh, So, yeah, so we need the, uh, data provider from your side so that we can, uh, replace it over here.

32:15 Insight Fusion Analytics: And, of course, we'll, uh, he'll have to change the code also for this strategy.

32:30 Rupesh: Yeah, starting with 2011 till 2026 February, I did a backtest.

32:38 Insight Fusion Analytics: With the

32:39 Rupesh: previous one,

32:40 Insight Fusion Analytics: the one I showed

32:44 Rupesh: earlier. With the start of the meeting, 7 states, and

32:48 iPhone (115): so on. Sure,

32:51 Rupesh: Yeah. Uh, okay, I'll change all this. I'll redo that.

32:55 iPhone (115): But

32:56 Rupesh: with

32:57 iPhone (115): this

32:57 Rupesh: one, what
32:57 iPhone (115): did you get? What did you get with this?
33:01 Rupesh: We got 9%. I guess CAGR. I'll show you. This is
33:11 Insight Fusion Analytics: StateLog,
33:12 Rupesh: and,
33:12 Insight Fusion Analytics: uh, yeah,
33:14 Rupesh: yeah, that is, uh, basically that's it. This is Yahoo Finance, so, yeah, initial amount invested was \$100,000. And the final value was
33:25 Insight Fusion Analytics: \$348,000. Can you open
33:27 Rupesh: No. Is it visible now?
33:35 Insight Fusion Analytics: Clear? Yeah.
33:39 Rupesh: Hello?
33:42 Insight Fusion Analytics: Yeah,
33:42 iPhone (115): yeah. Yes, we can see you. We can see. Yes.
33:45 Rupesh: Okay, okay. We got 9 questions here, here, and, uh, And, uh, we got 44 to drawdown, but yes, the data source Finance.
34:04 iPhone (115): PGR was, uh, 12% and this is 9%. Okay, they're underperforming that and then short strategy. Did you do? Start strategy on this?
34:13 iPhone (115): I saw short there on one of the lines, but you didn't, you didn't buy those instruments, right? Did you? Did you?
34:19 iPhone (115): Thank you. Did you actually shot the, uhh, you did, you, you shot at it, like, like the, like the, like we, like.
34:28 iPhone (115): It, we gave you, I didn't see that. How to shot? I saw shot on your, on your diagram and your strategy, but the rules for sh- Short, I did not see in yours, but you included the rules for short, somewhere, and you shorted the, uh, UPro, when the- Bye bye.
34:44 iPhone (115): Because, you know, in the beginning, in the first hierarchy you showed, number seven was the short strategy it said. So, but I didn't see the- rules for short strategy in the sense that what- what instrument were you using to short?
34:58 iPhone (115): Did you uhh, did you- did you sh- short really? Did you- did you- did you buy the reverse U-Pro?
35:08 Rupesh: No, no, no, uhh, no. We're talking about SPX unit, right? Thank
35:16 iPhone (115): Oh, yeah, yes, yes. Let me pull up my shot. In the messages, what is sent you is SPXU. Hush offensive,
35:25 Rupesh: uhm.

35:26 iPhone (115): Yes. It's really active. Did you do SPXU or not? All right.

35:32 Rupesh: Yeah, yeah, yeah. Ah, one second actually. Thank you Yeah, can you see this? Okay. All right.

35:48 iPhone (115): Yeah, but what instrument did you buy?

35:52 Rupesh: The short entry condition I took is SPX. Less than 200 and weeks later than

35:58 iPhone (115): 30. Yes, that's an entry, but what did you buy? With that entry? Like, that is indicating a short position that you

36:07 Rupesh: need to go

36:08 iPhone (115): in short entry, but when you entered short, what did you do?

36:12 Rupesh: Uhh, we are selling the upper, right?

36:19 iPhone (115): Shorting the market is, Uh, selling the Upro is, is when one of those red flags are met, right? Whenever the red flags are met, you sell the Upro, right?

36:33 iPhone (115): You become 0%. You come into cash, right? And then, uh, when things are real, You, uh, you do, uh, you buy SPXU.

36:43 iPhone (115): You know, you're saying sh- not entry means you're shorting the market. What, what instrument are you using to

36:50 Rupesh: short the market?

36:50 iPhone (115): Instrumental. One in the messages I said with.

36:52 Sudhir: You

36:52 iPhone (115): XPX, SPXQ, which is the reverse. Off, QQQ, off. I if that, Off for UPro. In the materials if you see, ah, pre-shot.

37:04 iPhone (115): Umm, if this is our cell, It speaks you. And bye it speaks you. Thank you. No? That's okay.

37:18 iPhone (115): It's a side issue and it's your ch- Thank you. You're encouraging this. We can correct it later on. But I think you're, you're declaring short.

37:27 iPhone (115): We can, we can get to that later. That's okay. It's a, it's a sorry shit. Don't worry. I don't think you bought SPQ, which is what should be done when you upgrade.

37:33 iPhone (115): Yeah. Yeah. Yeah. Yeah. Yeah. That's a shot. You created the shot, make, rule, but I think, you. You did not include what should be done in that short rule.

37:47 Rupesh: . . Yes.

37:49 iPhone (115): See that ending there. You're saying it's short and it ends. It

doesn't lead to any action. action. No, do not understand that you understood.

38:02 iPhone (115): Thank you, Mr. So, when, when you are,

38:05 Rupesh: when you are

38:06 iPhone (115): hungry for you, when the spice lesson, when the spice lesson

200 SMA, okay. And the VIX is, is about 30,

38:17 Rupesh: not only you go to cash.

38:18 iPhone (115): Thank you much. If the VIX is below 200 and VIX is more than 30, you enter XBXU, which is the reverse of your, uhh, 50%.

38:27 iPhone (115): We'll see you of the cash you should put in XBXU. But that's a strategy number three, don't worry, we'll do it later.

38:33 iPhone (115): Because I shot, saw the shot there, I was asking in the results. Okay, that's

38:36 Rupesh: fine.

38:37 iPhone (115): 9% gather is what you got with that rules. Okay? Yeah.

38:40 Rupesh: Yeah. Yeah. Yeah. Yes. It

38:47 iPhone (115): could be, umm. I'll see you Bye. Could you, uhh. Could you share that results so that we can try to look at the logs, trade logs and stuff.

38:57 iPhone (115): See if you like, uh, if you have any concerns.

39:01 Rupesh: Okay, I'm sure. code.

39:04 iPhone (115): And you can run the simplified version like we

39:08 Rupesh: discussed. Yeah, totally. And also, uh, share the third strategy. Enjoy. I'm telling off for the short.

39:14 iPhone (115): I'll share it. Um, in the WhatsApp group, I'll share. Okay. and get

39:19 Rupesh: it. Okay. Okay, so. When you

39:25 iPhone (115): saw it, you would have. You were you were happy with the trade locks when you did audit, your theme reason will do you?

39:32 Rupesh: Yeah, yeah, but, uh, I mean. I cannot rely on Y15 data source. That's what I can say. So, what? I hope you

39:40 iPhone (115): enjoy So, we did QuantConnect. We logged into QuantConnect. It has, uh, but we don't know how to buy that data and give it to you.

39:48 iPhone (115): Like we said before. We will reimburse you guys if you can figure out where to QuantConnect is where we most of you know

39:56 Insight Fusion Analytics: data from data went to. We can . .

39:57 iPhone (115): What

40:00 Insight Fusion Analytics: do you think is
40:02 iPhone (115): appropriate? Yeah. So there you had any thoughts? No.
40:04 Sudhir: Ah. Uh, exactly. Yeah. I mean, I don't think there is a API for QuantConnect or anything like that. Yeah. So I can hear it.
40:13 Sudhir: If you guys have- have access to it, yeah, we'll do immersive for that.
40:17 Insight Fusion Analytics: Yeah. Data into will give us the data. Like, uh, we'll- we'll guide you guys how to go about that.
40:21 iPhone (115): Okay. How many hours did you guys spend, uh, No. Till now and watch, watch it looking like.
40:33 iPhone (115): Sorry, I'm, I'm, I'm drinking so.
40:36 Insight Fusion Analytics: No worries. For the start it takes. . It around 20 hours, and then every time a couple of hours a week, we can keep adding making changes.
40:43 Insight Fusion Analytics: Okay.
40:46 iPhone (115): Uhh, sorry, I did not understand. Did you say you spent 20 hours already or for the stat? It'll be 20 hours.
40:53 Insight Fusion Analytics: I do not. It will be for the entire frame world that is created, right? Like, uh, it takes a lot of time to see now.
41:01 iPhone (115): . Happy . Don't mind fixed pricing also, we just wanted to kind of get some sense of how much and what kind of stuff.
41:08 iPhone (115): Because it's a mean target, we have
41:09 Insight Fusion Analytics: five So, weekly, we only want to change around the parameters and all, right? Like, we can add, like, a couple of uhh, hours a week, you know.
41:18 Insight Fusion Analytics: So, that if you want to change around the strategy or whatever, and like I said, plus, if you want a trader to get involved, he can, like, uhh, uhh, like, he can give like a, we give it a, so we can have one consultation with him where he can give, like, detail uhh.
41:33 Insight Fusion Analytics: Yeah. His input on, on the strategy.
41:40 iPhone (115): Yeah. Okay. You
41:42 Insight Fusion Analytics: what do you, what do what do you be interested in then?
41:46 iPhone (115): It's
41:46 Sudhir: unique. Yeah.
41:47 iPhone (115): I think that's really

41:48 Sudhir: cool, right?

41:48 iPhone (115): Yes.

41:49 Sudhir: Yes. So,

41:49 Rupesh: yeah. So, yeah.

41:50 Sudhir: Because again, one of the things is about the timing, okay, when to, uhh, use the same. Is it going to be the end of the market or, intraday, I think that probably will make a difference, uhh, if you're looking at.

42:06 Sudhir: Like the long time horizon of 10-15 years. So I think that's where we need some expertise.

42:12 Insight Fusion Analytics: Okay. So, uh, yeah. So, on the name. Next call, I'll get him as well. He'll guide you very much in detail how to go about it.

42:19 Insight Fusion Analytics: So,

42:19 Sudhir: uh, I think it would be better if- If we can, at least, like, once we have some basic strategy, you know, our numbers honed in, then probably he can fine-tune it.

42:30 Sudhir: Let's just- Go ahead with our stuff, and then we'll involve him probably at the next level, once we understand the mechanics again, you know, where we are falling from.

42:39 Sudhir: Okay,

42:40 Insight Fusion Analytics: okay, okay, okay, okay. That sounds good. Okay. Also, I'm sharing the third strategy. I'm ready.

42:50 iPhone (115): I'll share it. Yeah, I just need to find it and I'll share it. Shortly I'll share it. Okay. Okay. And somewhere in one of the documents, I have to search

42:57 Insight Fusion Analytics: for it.

42:57 iPhone (115): It's one of the documents. So I, so sorry to get back. You, you answered it, but I did not understand.

43:02 iPhone (115): So tell me about finances once more. Like charges for you from your end to us, from us to you. What are the-

43:10 Insight Fusion Analytics: Okay, so, uh, can we give you a detailed report? Like, uh, what is it, uh, which will give you exactly the report and what will- from your side in terms of data and stuff, right?

43:21 Insight Fusion Analytics: Like, uh, if we need a, like, for example, if we need a trading view, backtesting, we need a trading view.

43:26 Insight Fusion Analytics: From your side, but that's not what we need. So, Rupesh will make the entire report and we'll give it to you guys.

43:31 Insight Fusion Analytics: He just wanted to check if it's all good and how

much effort he'll need. Apart from that, our team will lead.

43:37 Insight Fusion Analytics: I think he'll, he'll only give me a report once in

43:39 iPhone (115): depth. Okay, once you saw it out, let us know how much it's gonna cost you so that- We have some basic idea, uhh, in the sense that none of us are surprised, uhh, possibly or negatively kind

43:48 Insight Fusion Analytics: of stuff. Okay, okay. And

43:49 iPhone (115): uhh, and uhh, uhh, Rupesh, uhh, the work is good. Uhh, I think uhh, he basically honed in everything. There's only a couple of points in the stuff that uhh, that needed to, change in the diagram.

44:01 iPhone (115): But uhh, so it should be pretty straightforward for him, it looks like, because he got the concepts. Uhh, uhh, uhh, uhh, uhh, uhh, the concepts we have, whether they are great concepts or not, there's a whole different volume.

44:11 iPhone (115): But the concepts we had in our head, he got it. Uhh, this, this, shop, two, the two short strategies. One, I think I, it's there in your, uhh, in your messages there.

44:22 iPhone (115): I'll add one more short. out. strategy, uhh, for, uhh, that, that is, like, a sequential add-on to this. Uhm, and, uhh.

44:31 iPhone (115): And then, uhh, once, uhh, if, I think he was gonna share the logs for that one, uhh, if he can do this simplified strategy, I would say it to do items, uhh, so.

44:39 iPhone (115): Let me the financial stuff, uhh, but beyond that, send us, uhh, send us the simplified, uhh, report like this. The simplified strategy we did now, uhh, so that we can take a look, uhh, we also can try to look Look at those numbers a little carefully, ourselves and such.

44:55 iPhone (115): But, uhh, that would be my ask. So, there you are. It's the same. If

45:00 Sudhir: you the channel. Yeah.

45:04 iPhone (115): Okay.

45:10 Insight Fusion Analytics: Okay, so to be sure. Uh, by today you can give them a detailed, uh, rising report and uh, and you can also share your results with them so that they can cross check their- trade laws and everything.

45:22 Insight Fusion Analytics: Okay. Okay.

45:25 iPhone (115): Okay.

45:26 Insight Fusion Analytics: That's it. Anything else? Yes.

45:27 iPhone (115): No, keep in touch. Umm, sometimes, uhh, what happens is,

uhh, we are uhh, we are uhh. And see you we are pulling in different directions at work or something.

45:37 iPhone (115): And two, three days, we are radius island. And then we get motivated after that. And then we, we, we hone in two, three days.

45:43 iPhone (115): And then we go in little spurts. But we want to, we are, we really want to close the loop on this one in 30 days.

45:51 iPhone (115): Please.

45:51 Insight Fusion Analytics: I

45:52 iPhone (115): think the best

45:53 Insight Fusion Analytics: way I would recommend, like, get to a paper trading architecture at least. Okay. You get it running on board so that even if you go off for a couple of weeks, right, you at least have the results or whenever you start to resume, you really, okay, at least this is working.

46:07 Insight Fusion Analytics: In. I market on paper trading. Now we are ready to put money on that. Then

46:11 iPhone (115): money is already a money is already in my friend.

46:15 Insight Fusion Analytics: Okay. Okay. So,

46:16 iPhone (115): money, a lot of money is already in. It's just we are holding the strategy kind of stuff. But no, I agree with you.

46:21 iPhone (115): Uhh, we are uhh. We can start a paper trading strategy once we, once we hone a little bit and then change it.

46:29 Insight Fusion Analytics: Yes.

46:30 iPhone (115): Yes. Thank

46:31 Insight Fusion Analytics: Okay, and you are going to use which broker again or you don't have a preference.

46:37 iPhone (115): I use Fidelity. ability. Okay,

46:40 Insight Fusion Analytics: uhm,

46:41 iPhone (115): I

46:41 Insight Fusion Analytics: use Choxo.

46:42 Sudhir: And you are also

46:44 Insight Fusion Analytics: going to

46:46 iPhone (115): use IB. baby. We are going to use IB

46:48 Insight Fusion Analytics: also. We have

46:50 iPhone (115): already opened an account on that one and we have used it before.

46:54 Insight Fusion Analytics: We have a lot of- bots running on IB here, you

know, so we prefer working with the API that we are comfortable with instead of running into new problems on those.

47:03 iPhone (115): Well, IB is fine,

47:06 Insight Fusion Analytics: IB is

47:06 iPhone (115): fine. That's where we are running our, uh, we are starting a public, uh, strategy and, uh, them. This, we will run it on IB.

47:13 Insight Fusion Analytics: Okay, okay, okay. Okay. Sounds good. So, uh, IB care and data bento sounds good. So, uh, Rupesh will tell you all the other, It is.

47:20 Insight Fusion Analytics: Okay.

47:21 iPhone (115): Thank you.

47:22 Rupesh: Yeah.

47:23 Insight Fusion Analytics: Okay. Yeah.

47:25 Sudhir: Sounds good. Hey, thanks, guys.

47:26 Insight Fusion Analytics: Okay, bye. Bye. Bye.

47:27 Rupesh: Bye.

47:32 Insight Fusion Analytics: Lupis, hold on. .

Meeting Recording - April 9, 2026

00:00 ameeshkatariya: Hey

00:02 Insight Fusion Analytics: Ravi! Hey I can hear

00:07 Ravi: you guys. Yeah,

00:08 Insight Fusion Analytics: so uhh, how are you- how are you doing? Long time.

00:12 Ravi: Thank you. Life is good, how are you guys doing?

00:15 Insight Fusion Analytics: All good, all good. So, basically, Amish is our, uh, one of our senior algo traders. Whenever we have a good project, it's Amish who takes over from, uh, from our team.

00:24 Ravi: So,

00:24 Insight Fusion Analytics: uh, yeah, he's here. So he'll be taking you guys through, uh, the

00:29 Ravi: entire stuff.

00:30 Insight Fusion Analytics: So, should we wait for Sudheer or-

00:32 Ravi: Yeah, yeah. I texted him. He said he was gonna join. Uh, let's see. I don't think he's there yet. So, he said he's logging in.

00:39 Ravi: Let's give him a couple of minutes.

00:42 Insight Fusion Analytics: Okay. So, yeah, even, uh, even for optimization, I think, uh, Amish will be the right guy to- to have a discussion with.

00:49 Insight Fusion Analytics: Yeah.

00:50 Ravi: Good, good, good. How's, uh, how's the weather?

00:55 Insight Fusion Analytics: The weather is, uh, getting hot here, uh, in Bombay now. It was, uh, much more pleasant the last time you spoke to me.

01:03 Insight Fusion Analytics: But yeah, it's getting hotter day by day. So, uh.

01:06 Ravi: Oh, I thought you were based out of Delhi. Are you based out of Bombay?

01:08 Insight Fusion Analytics: No, I'm, I'm, I'm in Bombay all my life. How often do you come to India? Or you never come?

01:15 Ravi: No, we come once a year, coming this summer to Hyderabad. Where do you come to Hyderabad? Hyderabad. Hyderabad.

01:22 Insight Fusion Analytics: Okay. Okay. Please, if you ever come to Mumbai, please

01:25 Ravi: let me know. We try to avoid Mumbai. It's just too crazy. It's what? It's too crazy. The airport 10 years ago was really bad.

01:34 Ravi: The international domestic, like, lot of lots

01:37 Insight Fusion Analytics: of,

01:37 Ravi: uh, you know, you had to, it was very bad. Yeah. Now it's same domestic and international same airport, but like 10, 15 years ago, it was, uh, the, it's not, uh, it was not very convenient.

01:50 Ravi: Yeah,

01:50 Insight Fusion Analytics: it's, uh, I think It's much better now. And, uh, there's a new airport. And, uh, another thing, the good part is the airport is in the, right in the heart of the city, you know, so you don't have to travel.

02:02 Insight Fusion Analytics: Yeah. In Hyderabad, it's

02:04 Ravi: like, uh, peak hours, uh, traveling five kilometers. It will take like half an hour, in Bombay, it takes two hours kind of stuff.

02:13 Insight Fusion Analytics: Uh, no, but the airport is like just five minutes away from my house. In fact, you can take lessons,

02:19 Ravi: so, uh, it's nice. Yeah. Yeah. It's kind of, uh, Bombay, yeah. I think I've not traveled in the new airport, like 15 years ago, I traveled a couple of times.

02:29 Insight Fusion Analytics: Please, if you, please, if you ever come, please give me a prior intimation. Let me host you. Of

02:35 Ravi: course, of course, of course. No, I, yeah, I'll let you know, but

02:41 Insight Fusion Analytics: Sudeer is here.

02:43 Ravi: Oh, okay. Hi. Sorry.

02:45 Sudhir Vyakaranam: Hello, how are you guys?

02:46 Insight Fusion Analytics: Sudeer, I was just about to say that you have never let us see you. Is it so?

02:52 Sudhir Vyakaranam: Yeah,

02:52 Insight Fusion Analytics: that's the first time.

02:54 Sudhir Vyakaranam: I don't know.

02:54 Insight Fusion Analytics: That's the first time you are letting us see you. Thank you so much for that. Thank you so much. Okay,

03:01 Ravi: perfect, perfect.

03:05 Insight Fusion Analytics: No, No, you have surpassed, like, we are more than happy to see you. Thank you so much.

03:10 Sudhir Vyakaranam: Okay,

03:12 Insight Fusion Analytics: thank so Thank you.

03:29 Insight Fusion Analytics: Okay. So, Amish, let's, uh, dive right in, uh, and have your backtest ready, uh, whatever presentation ready.

03:36 ameeshkatariya: Yeah. So, uh, I think one of the primary requirements that we wanted, uh, from step one was that we wanted to shift to Data Bender, which is a much better data source.

03:47 ameeshkatariya: So, uh, now this is basically the step one of the strategy, and these are the backtesting results. As you can see, this is 100% GuPro, as per the, uh, step one, you know, considerations, and these are, these are the four states, it's either Bull, Trim, Defensive, or Cache, and with this, the final value

04:07 ameeshkatariya: , I mean, the final CAGI that we achieved was 20.3%, and the drawdown was around 38.3%, and we took a total of 82 traits, and this started the market out in 2020, and this is till 2025 end.

04:23 Insight Fusion Analytics: So just, just to clarify, uh, Ravi and, uh, we have the data from, uh, we'll just be adding the data.

04:31 Insight Fusion Analytics: The main part was creating the backtest. Okay. We have the data from 2018 right now. Okay. Because that's the only data that we have from data bento.

04:39 Insight Fusion Analytics: We will find a new data provider. And, uh, what do you say if, uh, and we'll have to just connect that data to

04:46 ameeshkatariya: our current. I mean, absolutely. It is, it's always. Up to you guys, what kind of data do you want to run through the backtest?

04:54 ameeshkatariya: If you want 2001 to 2021, that we

04:57 Insight Fusion Analytics: have already discussed that. I mean, so basically we have, uh, we say data bento only has data till 2018. Okay.

05:05 Insight Fusion Analytics: That's it.

05:05 ameeshkatariya: Okay. Got it. So, uh, as you can see, based on the conditions that we have, we are, uh, as per step one is of course, we give the highest priority to VIX.

05:17 ameeshkatariya: Then it's, uh, RSI. And then at the end, uh, sorry, then it's HMA, SMA, and then it's RSI. So, uh, we have completely taken into consideration all those conditions.

05:29 ameeshkatariya: And then going on to step two, this is where we kick in into the seven state, finest finite state machine, wherein we have Bolt, Trimmed, Defensive Spy, Defender, Defensive QQQ, Defensive Bolt, SMA, and Cache, just like before.

05:43 ameeshkatariya: Uh, and here we had a 20.4% CAGR and we took around 238 trades in total. So, these are the results for the benchmark.

05:54 ameeshkatariya: Now, if you guys want me to clarify anything or go deeply into any other part, happy to clear that up.

06:00 Insight Fusion Analytics: Uh, you both are on mute.

06:10 Ravi: I'm sorry. I the graph. So, sorry, so the

06:12 Sudhir Vyakaranam: first one was just you pro only, right? Again, it's not buy and hold you pro, it's you pro as per the strategy, right?

06:18 ameeshkatariya: Yes, yes, yes, yes, exactly.

06:21 Sudhir Vyakaranam: Okay.

06:21 ameeshkatariya: So that's the first one where

06:22 Ravi: you have

06:23 ameeshkatariya: 100% allocation or you have 75% when the RSI condition triggers, which is greater than 75, or it's defensive when it's over 200, but less than 50, but VIX is still less than the threshold, which is 30.

06:37 ameeshkatariya: And the fourth one is all cash because the VIX threshold is crossed. So that's the four conditions. So

06:43 Ravi: this, this graph is very good. Obviously, high fidelity graph you're showing us, especially it's, but it's very dense for us.

06:51 Ravi: So one thing that makes our mind a monthly data is also not very helpful, but it's helpful, uh, for data analysis.

06:58 Ravi: Deep diving, the easier presentation for us would be annual, uh,

returns, uh, for this strategy versus, uh, uh, S&P, uh, 500 versus you pro buy and hold, you know, that's it.

07:14 Ravi: It's like yearly, you know, 20% CAGR we see with this strategy. I just, I'm not seeing, uh, S&P 500 CAGR.

07:23 Ravi: I'm not seeing you pro buy and hold CAGR because it's easy in our mind to kind of figure out if you see that we just need.

07:30 Ravi: you know, a table or something or even a graph, but each one, but I think annual returns if you see with each one, we can kind of deep dive into the trades for that year and see how this strategy, why did it not, why did it barely matches S&P 500.

07:46 Ravi: It did not beat, we can dive down, dive down. If you give us annual, you know, just annual 2020, January 1st to December 31st strategy, this strategy job, and then you go buy and hold, and then S&P 500.

07:59 Ravi: It's very simple. If you

08:01 Insight Fusion Analytics: can

08:01 Ravi: just, yeah, it should not take too long. Too much of work for you guys, but if you can turn that

08:04 Insight Fusion Analytics: sounds good, we'll do that also. Uh, Amish, can

08:07 ameeshkatariya: you, I think I, so the, the request that you have, right, it's step one data bento, and then it's step two.

08:13 ameeshkatariya: So we already have the annual returns for it. It's in this range if you want. So. So basically I'll just give you, uh,

08:22 Insight Fusion Analytics: I'll just give you one second. Can you go on the graph once

08:25 ameeshkatariya: Amish,

08:25 Insight Fusion Analytics: uh, and is there a portfolio graph at the bottom?

08:30 ameeshkatariya: Uh, yes, no.

08:32 Insight Fusion Analytics: Um, can you scroll down?

08:35 ameeshkatariya: For us here.

08:36 Insight Fusion Analytics: Yeah,

08:36 ameeshkatariya: that's

08:36 Insight Fusion Analytics: the portfolio graph, right? So you are saying what you go on the left and just shift on the left.

08:44 ameeshkatariya: Oh, wait on the left. Sorry.

08:46 Insight Fusion Analytics: Yeah. you are saying you, this is a portfolio graph, the final one. Okay. So you are saying you want things to be mapped over here so

that it will be easier for you to, uh, plus of course, the wheel also make a table if you like, but, uh, this will be.

09:07 Insight Fusion Analytics: It

09:08 Ravi: easier Or graph. Or graph. Simple. Yeah. Less dense, less dense annual. That will be, we want, I want annual returns every year with this strategy versus other strategies.

09:17 Ravi: Got Got it. Which state, you know, 2020 state was different from 2020. Which is inflation, inflation, things like that.

09:27 Ravi: So I just don't want to kind of deep dive.

09:29 Insight Fusion Analytics: Sounds good.

09:29 Ravi: So that's like five minutes of your work.

09:32 Insight Fusion Analytics: We'll do it. That's not an issue. That's not an issue. Also like that will be done. Plus we will graph it over here on the portfolio.

09:40 Insight Fusion Analytics: So this final graph is basically what, like your portfolio started over here and now your portfolio is over here. So that's easier for you to also visually watch it.

09:51 Insight Fusion Analytics: Yeah. Also, uh, Excel wasn't possible and we'll figure that out later. Uh, that's not a big deal. Excel wasn't possible.

09:58 Insight Fusion Analytics: What we are trying to do for you is over here on the top, on the left, there will be a section that will be us like, uh, yeah, just stay there.

10:07 Insight Fusion Analytics: Uh, on the complete lab, there will be a section section, which will be a slider. Okay. Like all the buttons that you want, there'll be sliders over here and you can keep, uh, switching the buttons over here and you will be getting this, these graphs will be changing accordingly.

10:25 Insight Fusion Analytics: Yeah. Does that sound good?

10:27 ameeshkatariya: Yeah, even I would like to pitch in here is that, uh, essentially when we do a backtest, right, we take, we have all the data from each trade log from each day when the trade was to be placed across the backtesting framework that we offer.

10:42 ameeshkatariya: If you have any other questions. Any other requirements that you want to get on the dashboard, because this is our proprietary way of showing backtesting results, because in general, a visual way is much better so that we can see the actual trade log across the timeline, along with all the other indicators

10:56 ameeshkatariya: that you guys wanted us to test out.

10:58 Insight Fusion Analytics: So if

10:59 ameeshkatariya: you have any other requirements, please let us that should show up on the dashboard. We can surely get it done in, you know, in very little time.

11:05 Insight Fusion Analytics: Can you also, if you want, you can even take them through the trade logs or whatever backtesting we have done.

11:10 Sudhir Vyakaranam: Yeah, yeah, yeah. If you could just zoom in. Yeah. into a particular month or something like that and, you know, kind of see where volatility is high and how the strategy is working in terms of the trades going in or coming out again, you know.

11:24 Sudhir Vyakaranam: So we see that again, you know, these arrows again, you know, the green is probably buy and, you know, the reds are the sell.

11:31 Sudhir Vyakaranam: Is that what it is again, you know?

11:33 ameeshkatariya: Yeah, yeah, yeah. So, uh, this is how if you, so let me see if I just say, let's say it's It's here, it's by and by.

11:44 ameeshkatariya: It's a bull 100. Now, if you see it's under 60 RSI, the SMA 50 is above, the SMA 200 is above, and then we enter the, uh, first stage, which is bull 100, right?

11:58 ameeshkatariya: And then the VIX is also below our threshold. But then here, when, let's say, we enter a defensive, uh, we enter the defensive stage.

12:09 ameeshkatariya: So, what has happened here is that essentially, our, uh, is that the SMA 50 is below. So, that is why we have shifted to a defensive state, and that's around, that's, that's the 50% allocation.

12:23 ameeshkatariya: So, we have multiple months of, so, let's say, here, if I go, it's bull trimmed. So, uh, this is

12:30 Ravi: where, yeah. RSI trim happened, RSI 75. Yeah, yeah,

12:35 ameeshkatariya: yeah, yeah. So, uh, we have, uh, essentially here, The RSI is great was, you know, so we have we have tons of.

12:48 ameeshkatariya: Uh, trades here, and if you want me to look through any one of them, like I just went through, I can, you know, of course, go through.

12:55 Ravi: So, so, so, uh, uh, again, this graph is good, uh, because in a year there will be like, I don't know, 20 trades, 30 trades, or whatever.

13:04 Ravi: Less than that, probably, not too many trades. Uh, the date, uh, rather than me searching on this one, I think it's just easier if you can just, you already, you can make minor changes, and present in a, in a column and row format also for us, because we can it's easy for us to look at the date, what

13:22 Ravi: happened, it's, it's easier that way, to look at, we're, I'm just used to looking at that way, if you can just get us that data.

13:28 ameeshkatariya: Yeah, yeah, yeah.

13:29 Ravi: Is there

13:29 ameeshkatariya: any data I'm

13:30 Insight Fusion Analytics: not We have the trade logs, right?

13:32 Ravi: Trade log is there somewhere?

13:34 Insight Fusion Analytics: Yeah, yeah, we have, can you open the trade log, like in Excel, don't open here, like, open in Excel.

13:39 ameeshkatariya: I have the entire trade log for each step.

13:42 Ravi: Perfect.

13:42 Insight Fusion Analytics: No, no, can you open in Excel now, like this? Yeah,

13:44 ameeshkatariya: yeah, yeah, I can, I can, I can open in Excel

13:47 Ravi: as well. Okay, that's one thing. The second thing is CAGR, ah, it's, ah, to be, to, to be sure while you're looking at that, this data is from January 2020 till

13:57 Insight Fusion Analytics: June,

13:58 Ravi: till December 31st,

14:00 Insight Fusion Analytics: 2025, correct? Correct, yes.

14:03 Ravi: Okay, I just Googled, ah, CAGR. It's there

14:04 Insight Fusion Analytics: for

14:05 Ravi: S&P 500, it shows

14:06 ameeshkatariya: 15%, so I think this, this is from October 2020 to December 2025. If you want it since then, I'll, I'll do that.

14:16 ameeshkatariya: It was just a little testing that we were doing internally, might have been.

14:20 Ravi: It's October 2020?

14:23 ameeshkatariya: Yes, yes.

14:25 Ravi: Okay, okay.

14:27 ameeshkatariya: You can, you can check the, the Kaggle with that value and then, you know, we can be good to go.

14:34 ameeshkatariya: One sec. Yeah, that's okay. Yeah. So this is

14:43 Ravi: basically the,

14:44 ameeshkatariya: I think this is something that you wanted, right? In

14:46 Ravi: an Excel format. Correct. Yeah. This is easy for us to kind of copy and paste into, we need to audit with anything.

14:53 Ravi: Okay. Okay. This is helpful. Yeah. Go ahead.

14:59 ameeshkatariya: Yeah. So this is basically the entire CAC. This is the entire trade log. Uh, everything that gets plotted. Onto the graph, right?

15:06 ameeshkatariya: This is essentially just this data along with other data that we map out with the metrics, which is, which is the, uh, which is essentially the values which triggered the state in the first place, because we have a state-based system, right?

15:18 ameeshkatariya: Nothing gets triggered according to the day it gets triggered. It's triggered according when a state change happens. So that's what this is about.

15:26 Ravi: And, uh, and is it a once a day data? What the data, what, what data points are we doing?

15:32 Insight Fusion Analytics: It's a, it's a once a day, it's a once a day data. We can go into more detail if you like.

15:37 Insight Fusion Analytics: That part won't, that part won't take this much time.

15:39 Ravi: Is it based on closing time or, uh, lowest to highest? Can you show

15:43 Insight Fusion Analytics: him the, can you show the raw data if you, you want to see the raw data once?

15:47 Ravi: No, that's okay. I just want to kind of see. So closing time and then when is the, when is the trade happening?

15:53 ameeshkatariya: Oh, so the trade, I know that's supposed to happen at 10 a.m. in the next morning, but right now this is only daily over Chelsea.

16:02 Insight Fusion Analytics: Regardless, we have only one data point, right, Ravi? So it will happen at that data. If you want it to happen at a certain time.

16:09 Insight Fusion Analytics: Like this, uh, then we'll have to take the hourly data, which

16:13 Ravi: is also, but, but I just want to understand what the data is being presented.

16:17 ameeshkatariya: Yeah. Part of it was supposed to happen at 10 a.m., but because we only have one data point, it's happening on that one.

16:25 Ravi: That's okay. But today, for example, today there was a state change, for example, today's market. It was, uh, the 200, it crossed 200 SMA and

16:34 Insight Fusion Analytics: also

16:34 Ravi: 50, 50-day SMA today because of the, all the things that have happened, geopolitics. So based on, you know, your review, this one is a trade happening at the end of the day today, or is it happening tomorrow?

16:46 Ravi: It's my

16:47 ameeshkatariya: first one tomorrow. So the signal was this close and it executes at the next day's open something

16:53 Ravi: like open or close, because I know you mentioned it's kind of. We have only one data point, right? We're only closing data points.

17:00 Ravi: So technically it's executing at the closing tomorrow.

17:03 Insight Fusion Analytics: It's also written over there. The signal is at the previous close executed today open.

17:09 Ravi: But you don't have to, sorry to belabor, but you don't have two data points. Oh no, I have

17:13 ameeshkatariya: one data point. The data point means that we have the daily OHLCV candles.

17:18 Insight Fusion Analytics: Yeah.

17:19 ameeshkatariya: So it's not that we only have the closing values

17:21 Insight Fusion Analytics: of each. Yeah.

17:23 ameeshkatariya: We have the OHLCV data for each individual day.

17:26 Insight Fusion Analytics: So we have the open and

17:27 Ravi: close both. Yeah. Plus one signal, uh, opening, opening up data point is what this audit is based off. I'm not saying it's wrong.

17:36 Ravi: I'm just, I want you to understand.

17:37 Insight Fusion Analytics: Amish, you can just open the data, right? It'll make it very clear. Yeah. So we'll have the OHLC data. So that means we have the open also, high also, low also, close also for one day.

17:50 Ravi: Okay.

17:50 ameeshkatariya: So, so

17:52 Insight Fusion Analytics: I was wrong. So, I mean, I said it, uh, wrongly. We don't have, yeah. So we, so we do have, uh, open, close both.

18:02 Insight Fusion Analytics: I meant only one, uh, but so yeah, this is the,

18:06 ameeshkatariya: uh, so this is essentially the data. Now I know that this is not exactly the, I can, I can of course show you, I'll, I'll open this up on.

18:16 Ravi: That's okay. I don't understand what I'm looking at, but, uh,

18:20 ameeshkatariya: yeah, this is, this is just my bias here. I'm so used to looking at JSONs and CSVs that I can read this just like

18:26 Ravi: every normal day.

18:28 ameeshkatariya: But yeah, of course, I, I'll show you here. This is, this is a

18:31 Ravi: much Ah, yeah, high, close. Okay. Got it.

18:34 ameeshkatariya: Got it. Yeah. So this is, this is basically the data that we

have

18:38 Ravi: per day. Open, high, low, close, volume. Okay.

18:41 ameeshkatariya: Yes. Yes, yes, yes.

18:43 Insight Fusion Analytics: So we have the data from 2018, by the way. We'll just,

18:48 Ravi: do you have a tagger for S&P, uh, on this one? Uh, yeah, Google, I can find. I

18:54 Sudhir Vyakaranam: mean, yeah, is it possible if it's, if it doesn't take too much of time, again, I know if it's just changing the date values, can you start with a little bit, uh, you know, maybe 2018 or something like that, because we want to see how this strategy works, particularly in COVID kind of dips, again, you

19:09 Sudhir Vyakaranam: know, particularly if you're talking about a leveraged portfolio, do the signals work properly or, you know, how is the Keger gonna be hit, uh.

19:18 Sudhir Vyakaranam: So, I don't know if you can go back a little bit, again, something that would cover, again, you know, we can start with 2020, January 1st, or, uh, even a, uh.

19:26 Sudhir Vyakaranam: I

19:26 Ravi: think 2018, or they can go from 2018, yeah, just 2018, January

19:30 Sudhir Vyakaranam: 1st, and if you

19:31 Insight Fusion Analytics: have, are backtesting right now, Amish, is from 2018

19:34 ameeshkatariya: or

19:34 Insight Fusion Analytics: 2020, 2020, yeah, so it won't take us more than a day to just, uh, give you the backtest. Backtesting results from 2018, and then if you all want, we can find more data, but for now, I think we can present from, uh, 20, uh, the, uh, uh, 2020, October.

19:52 ameeshkatariya: If you require a quick change here, I can surely, uh, go in

19:57 Sudhir Vyakaranam: and- Just change the date, just change the date. If you want to see the key and the yearly numbers. Yeah.

20:02 Sudhir Vyakaranam: Just give me a second.

20:03 ameeshkatariya: I'll, I'll jump back into the script and get it done. Okay.

20:08 Insight Fusion Analytics: One second.

20:08 ameeshkatariya: Um, Sudheer,

20:09 Ravi: uh, while he's doing that, I didn't get a chance to speak with you. I spoke with, uh, Anmol, uh, one week ago.

20:23 Sudhir Vyakaranam: Okay.

20:24 Ravi: And he was updating me about these, these stuff. He was telling me about DataBento 2018. Apparently DataBento has 2018. Apparently DataBento has older data also, but I think are, because remember we had Svex and, uh, SXUV, which is short, I think those, because I think those started only in 2018.

20:49 Ravi: I think that's why, I think, I, I think that's why they could, if you needed the whole strategy, I think they can only go to 2018.

20:56 Ravi: Uh, so I kind of mentioned it to him earlier that, uh, after this initial data, we might just do the, uh, the, uh, the Upro and TKQ strategy, which is just a long strategy from 2011 and 12, because DataBento data goes much older than 2018.

21:13 Ravi: No, no, no. We have, yeah, we

21:13 Insight Fusion Analytics: have done DataBento since, uh, data. For a very long time. I'm saying for this strategy, we have it only for,

21:22 Ravi: The instruments we chose, those are, because those were not there before.

21:25 Insight Fusion Analytics: So,

21:25 Ravi: uh, we might, uh, so that's one thing. So the, the second thing is, uh, after this initial review, if needed, we can, uh, we can do some synthetic, uh, not as clean as this.

21:34 Ravi: But some sort of synthetic data creation we can do, because I think you pro creation is very easy. And there's Google, uh, if you Google how to create synthetic you pro, it has a daily formula.

21:46 Ravi: It's very, there are only three, three, uh, three inputs to this. So we that kind of stuff. Same. So, so we potentially can do into 1980s and stuff also, which won't be as clean as this, but there's some data.

21:59 Ravi: So that's one thing. The second thing is, uhm, uhm, I think for you, Sudhir, that was not, not, that was not anything else.

22:11 Ravi: After he's done with that, let's look at, uh, short, because I think, uh, he showed us, uh, you prolong strategy.

22:19 Ravi: He was, uh, showing us, uh, the complete strategy tagger and, uh, he showed it and we kind of asked too many questions and he was going there.

22:27 Ravi: So we'll ask him to kind of present that, um, that full strategy data also after this.

22:32 ameeshkatariya: Yeah, no, I think it'll take a bit of time for it to load up because

22:39 Ravi: we'll have to

22:40 Sudhir Vyakaranam: wait for to load So, Ravindra, do you want to see the Mixed Upro?

22:43 Ravi: Yeah, the other graph you were showing us earlier that, uh, we took a

22:50 ameeshkatariya: tangential diagram. So this one is the Mixed Upro. Plus, the T-Triple-Q graph, and, uh, we had a CAGR of 20.4% here.

23:02 ameeshkatariya: Plus, we had, uh, we had around 238 trades in total. So, this is,

23:09 Ravi: Sorry, is, does it include all the also the short, the two short strategies?

23:13 ameeshkatariya: No, no, no. The S-VIX and the SPVX shorts, no, they are the step 3 and step 4, as mentioned, you know, in the proposal.

23:19 ameeshkatariya: So, this only has the bull engine for now, which is the UPRO and T-Triple-Q, but the bull engine was only UPRO, and now it's the Atlassian.

23:27 ameeshkatariya: So, nothing changed much, but the addition of TKQ

23:30 Ravi: in this time frame? Oh, no.

23:33 ameeshkatariya: Yeah, I think that, in fact, to the tune that I've observed the results, the UPRO Bye.

23:43 ameeshkatariya: One has a better gagger, but, uh, yeah, this one was more or less similar when it comes to the actual results that we got.

23:53 ameeshkatariya: Not that much of a difference. I think we might see a much better and a much larger difference when it comes to when we include the shots.

23:59 ameeshkatariya: But, yeah. Because right now we're only trading on one way of the market. And when we add the shots, maybe we get a better return percentage on the start.

24:07 Ravi: Okay.

24:08 Sudhir Vyakaranam: Which do you have the data or do you have to, are you still working on it?

24:11 ameeshkatariya: Uh, which one? Sorry.

24:13 Sudhir Vyakaranam: The, the big second, you know, the, um, uh,

24:15 Ravi: shot the shot. I think that is next steps. He didn't,

24:22 ameeshkatariya: I won't have the data for that right now because I'm not really written on to the, uh, down to the board.

24:26 ameeshkatariya: We

24:26 Insight Fusion Analytics: have the data. I mean, we have downloaded all the data,

24:30 ameeshkatariya: but if you call it, talk about raw data, we have the

calculations for it. I have, we haven't gotten to

24:36 Insight Fusion Analytics: that yet.

24:38 ameeshkatariya: Get to that a bit later on, like in the next step.

24:41 Ravi: Okay.

24:42 Sudhir Vyakaranam: But that's fine.

24:44 ameeshkatariya: So this again, uh, let me just. Stretch out. Yeah. So this is how, you know, uh, the seven states are looking at, if you want, I can, again, as Anmol said earlier, this is the portfolio value that we show, uh, showing you, uh, slightly.

25:04 ameeshkatariya: More zoomed in. So this starts from our, uh, 2020 October thing down to, uh, 2025 end.

25:17 ameeshkatariya: So

25:17 Insight Fusion Analytics: there's a, you could draw down. Okay. Like, uh, what's the max, what's the drawdown for this max drawdown?

25:21 ameeshkatariya: Uh, yeah. So the max drawdown for the, uh, step two would be, uh,

25:29 Insight Fusion Analytics: when it's not mentioned

25:30 ameeshkatariya: above, I think there was some variable read error might have been that it's not reading it correctly. But yeah, on the step two data bento metrics, I think the max drawdown is 50.09%.

25:43 ameeshkatariya: So we have a very large drawdown on this one, but on the last one, it was just 38%. On the

25:47 Ravi: pure youpro, it was 38?

25:52 ameeshkatariya: And here it is around 50.09%. So the youpro trades and the TWQ was split 119, 119. And, uh, we had, uh, we had almost 55% of the trades were in bull.

26:08 ameeshkatariya: Uh, 22% were in cash in Step 2, uh, 7% were in Defensive, 5.6% in Bull Trimmed, 4% in Defensive TWQ, 2.4% in Defensive Spy, and 1.5% in SMA Recovery.

26:24 ameeshkatariya: I also have annualized returns, I'll just say it out loud, it does not appear on the graph. Like, in 2020, we had a 16% return, 2021, year-to-date, we were 52.14%, positive.

26:37 ameeshkatariya: 2022%, we were down 40%. 2023, we were up again 40%. 2024, we were up, 2025, we were up. So, we also have annualized returns, of course, in the next iteration, I can show you up on, you know, on, on the, on the visual graph as well.

26:52 ameeshkatariya: So,
26:54 Ravi: you said 40% drawdown in 2022?
26:56 ameeshkatariya: Uh, yeah, no, not drawdown, it was the return. So, you're 40% down for the year, on 2022. So, from January 1 to 12th December, we were 40% down.
27:07 Ravi: Okay.
27:08 ameeshkatariya: Yeah, and in all
27:09 Ravi: the rest
27:09 ameeshkatariya: of the years, we were up. That's because of the, We had bear phase in 2022. I think that was, uh, that's purely because we had a very huge bear phase in
27:19 Sudhir Vyakaranam: the year. And the tech stocks got really hit more than the, uh, general index. So, yeah.
27:24 Ravi: But even, even, even with general, with, uhm, with, With long Upro, what was the return in 2022? Can you look once?
27:33 Ravi: The, only the long Upro strategy?
27:35 ameeshkatariya: Okay. Only in the long Upro strategy, we were even in, then in 2022, we had a 35% loss.
27:42 Ravi: Okay. Because I think, uh, Upro, I'm just, I'm just looking up 2022 Upro was, uh, 56 down for the year.
27:48 Ravi: Uh, 56% down for
27:50 ameeshkatariya: the year.
27:51 Ravi: Uh, so we were like, because we came out of it, we are like 37, it looks like based
27:56 ameeshkatariya: on what we recorded. We had a lot of hydration, right. Of getting in and
27:57 Ravi: getting out.
28:00 ameeshkatariya: We kept changing our positions throughout the year. Of course, even if the, even if the ticker itself is down 56% a year, we could have had small, uh, positive runs in the middle of it, right?
28:12 ameeshkatariya: Like wherein the stock had small pullbacks or, or retracements. So that's why I think the overall return percentage for us is lesser, but, uh, it, it, uh, that's why it's 35% down for the year.
28:24 Ravi: Show me, show me the logs for
28:26 ameeshkatariya: 2022. 2022, you want to see, uh, the trade logs?
28:31 Ravi: The logs, trade logs.

28:33 ameeshkatariya: Okay.

28:33 Ravi: And pull it, pull it on Excel. It'll take a second for you to copy into Excel.

28:36 ameeshkatariya: It's easier for

28:38 Ravi: us to take a look.

28:40 ameeshkatariya: Yeah, I know 100%. I will share you the, you want to see the results. Results for three. On the step two, right?

28:55 Ravi: Uh-huh.

28:57 ameeshkatariya: Okay.

28:57 Ravi: Step one or step two, doesn't matter. Step one is easier because there's no TQQ. Why don't you go to step one?

29:02 Ravi: It's easier. Because step two has too many trades.

29:05 ameeshkatariya: Yeah, so this is step one. And yeah, you want to go in 2022?

29:11 Ravi: Uh-huh.

29:12 ameeshkatariya: Yeah, gotcha.

29:14 Ravi: Can you back the step one?

29:15 ameeshkatariya: Can you

29:18 Ravi: the screen? This one? Zoom in. Yeah. Yeah. Okay. So 2022. So it's, uh, can you scroll to the right a little bit so that I can see a little bit more?

29:29 Ravi: Okay. And then Magda, Yeah. Yeah. That, that, that, that's the appropriate size. Thank you. So let's see. January 10th, sell bull defenses.

29:41 Ravi: So we had like 50%. Are we 50% there defensive? Yeah. Defensive is 50%, right? Good. And, uh, yeah. Then January 12th,

29:49 ameeshkatariya: uh, what is that 50 and 99?

29:53 Ravi: What is that 50 and 99 on the last column?

29:58 ameeshkatariya: Oh, that's the, that's the allocation. That's the target allocation. Oh,

30:01 Ravi: got it. Got it. Got it. So, so it, once again, 2022, uh, defensive, and then it crossed for two days, it crossed above.

30:12 Ravi: So you bought all of that. Next on 17th, it went below. So we sold 50%. VIX went up. So we closed.

30:19 Ravi: Killed it. And then, uh, within seven days, we went 100% bull. And within two days. So see that one, see that, uh, 23 row?

30:35 ameeshkatariya: Okay.

30:36 Ravi: 23 row. If you can see, February 2nd, uh, was it February? Once again,

stay there 23 row, February 3rd. So there you can also look, you can also comment.

30:47 Ravi: See that we are re-reentered. Right. We re-entered, uh, because, uh, S&P 200 was breached to the positive side from zero, 100% cash.

31:03 Ravi: We went 100%. We went 100%, uhm. Upro, because we went upside. Once it goes upside, we don't really, this, this is what, we are, we were having errors earlier also.

31:17 Ravi: Then the S&P 50 will take a while to catch up, that's like, with, almost always. It'll take a while to catch up.

31:25 Ravi: S&P SPY 200 will be breached on the upside, and then SPY 50, SMA 50 will take a little while, could be a week or a month, based on how quickly it's coming up.

31:40 Ravi: Kind of stuff. So we don't want to miss the upside. So this trade, on Feb 2nd, trimmed, trimmed it, two days later, because for those two days it waited, and it said, oh, SMA 50 is below SMA 50.

31:56 Ravi: So when you are coming from defensive, ah, to, from defensive, from cash to bull, we should not look at SMA 50, that, that, we had trouble ourselves coding for that, which is Yeah, yeah, no, I think we need some help from you.

32:14 Ravi: You understand the logic?

32:15 ameeshkatariya: Yeah, yeah, no, I, I got the logic. I, I, I exactly know what you're talking about because you said that when you're in cash, like you're 100% cash, and when you go to the bull 100 condition, you're not supposed to print down to 50% for the next two days.

32:30 ameeshkatariya: Now the thing is, what, what you could do here, what we have done here specifically is we've created an account.

32:35 Ravi: Sorry to interrupt you, one second. No, no, that's not the rule. The rule is anytime, anytime you're, so, so from a full, full, full account.

32:44 Ravi: Uh, what's the mode? Bull mode. If it drops to less than 50 day SMA drops below

32:52 ameeshkatariya: that,

32:53 Ravi: you go into defensive mode, which is 50%. Then to re-enter into bull mode, you want two days. But to, when you're in a cash mode and you're going into bull mode, from cash mode, once you breached a 200 SMA, you, you ignore 50 day SMA.

33:16 Ravi: At that point, because 50 day will take a while to catch up and this, this Feb, Feb 2nd, Feb, uh, what is that?

33:25 Ravi: I'm sorry, 20, uh, yeah, Feb 2nd trade.

33:30 Sudhir Vyakaranam: Doesn't exist, not buy, right? It's sold,

33:35 Ravi: because your SPY SMA 200 is, will be less than 50 day. It's, it's selling it kind of stuff. So we don't want, we want to ignore that rule when it is coming from cash mode to bull mode, the 50 day will So sorry, I don't know if you understood that part or not.

33:52 Ravi: Yeah, I, I understood. So, you

33:53 ameeshkatariya: wouldn't want to

33:54 Ravi: do it at

33:55 ameeshkatariya: any day, once, after, at any point in time, once they tried us, once the data is taken place, like when you have taken up 100%, uh, you know, once the data is taken

34:05 Ravi: place, like, you got the publicity, but you want to swerve. some changes. So, you make product available. Google. That's available in the Gentlemen world right is breached, 50 is not bleached for a month.

34:25 Ravi: I'm sorry, I will take up some

34:29 ameeshkatariya: time to breach about, on

34:31 Ravi: the upside where you're waiting for that. So So then, if you don't, if you don't ignore it, you will do what, what, it'll do what it did here.

34:43 Ravi: See, it's kind of sold off in an uptrending market. I don't know if it's an uptrending market or not. Generally, it's an uptrending market.

34:50 Ravi: It'll sell off. But looks like it was not an uptrending market in an uptrending I'm looking here. On the 11th, the market went down and it went to cash completely.

35:00 Ravi: So, maybe this was a good, this was a good save. But many times it has been a laggard. Doing this has been a laggard for the returns.

35:09 Ravi: So, I wanted to kind of just independently do some research on the question that I'm asking and, and, uh, and do that.

35:16 Ravi: Uh, Sudhir, did you understand what I'm trying to say?

35:22 ameeshkatariya: Yeah, no, I understood. So, here, I see the only thing. That has changed, right? So, we have a lot of defensive and kill switches and they are now interfering with a pure bullrun that you're trying to catch.

35:34 ameeshkatariya: At the end, I, I got the goal of your strategy. It's to, uh, get return while the momentum is on, right?

35:40 ameeshkatariya: So, here are defensive and kill switches. The kill parameters are, of course, contradicting with us going all-in. That's why it's

shifting to defensive after two days here.

35:47 ameeshkatariya: Yeah. So, uh, what I can do for you, maybe, is I can look into it and I can research whether it's a good idea to go all-in.

35:56 ameeshkatariya: In my experience, if you are asked from a personal perspective, going all-in at any point in time and disregarding the defensive parameters does not always work well in a larger context.

36:08 ameeshkatariya: Of course, in some selected pockets, it might give a much better return, but in general, and . , uh, the market, but I, I, I'll give you a,

36:17 Ravi: uh, Look at, look at both status. Only thing is you should be able to write a code that will ignore it.

36:23 Ravi: Then when you say it's moving from, uh, cash state to bull state, then you ignore it. That is a code we could not write.

36:32 Ravi: If you're able to write that and we can compare the returns.

36:35 ameeshkatariya: Yeah, I know. So, so this is, if you, if you see here, right, when we are moving from cash to, uh, cash to bull 100, we get full allocation.

36:45 ameeshkatariya: Now, why is we are shifting from bull to, to defensive? This is what I wanted to show it to you, where you want that this shift down to 50% should not happen.

36:55 ameeshkatariya: We have put in a counter here that says that once two days have crossed, then you can shift to, then you can, you can kick back in the defensive conditions.

37:04 Ravi: But it'll be, it'll always be two days because SPY50 will not catch up for like seven to seven days to two months kind of stuff.

37:14 ameeshkatariya: Yeah. No, you can extend this to infinite. It's. If we do not want it to shift down once at the re-entry phase, that.

37:23 Ravi: From cash

37:23 ameeshkatariya: to bull.

37:23 Ravi: Provided the prior state was cash to bull, then we ignore it. Provided the prior state was cash to bull, then not, not in, not in, uh, I guess.

37:34 Ravi: I guess at some point, if it, it, it like, like, like in a, in a bull market, long-term bull market, we, we want to respect that, but just, just play with that.

37:45 Ravi: I don't want to get hung up on that, but just play with those two strategies. Looking at the log further, bull defensive, defensive to cash, because, uh, uh, we breached the 200 day looks like, and then, um, and then cash to bull.

38:06 Ravi: Happened just 4 days later, where again, why, did the, did the spy was more than 200? Okay. Spy was more than 200 SMA looks like on Feb 16th.

38:19 Ravi: Feb 14th, it was, so what happened? Feb
38:22 ameeshkatariya: 15th, it was more, Feb 16th, it took the trade. So, this is where the signal happened and T plus 1 is where the execution did.
38:32 Ravi: So, what, what's happening in Feb and March? Are we, are we going around the 200, is going up and down about 200?
38:40 ameeshkatariya: Yeah, yeah, I think, I think as far as I can see in the trade log, it's, it's, it's a volatile journey.
38:44 ameeshkatariya: That's why it's constantly entering, killing, reentering, defensive, killing, reentering. That's what I can see here.
38:52 Ravi: So, SMA and in your, in your, uh, in your, uh, in your big column, the last but one column, reentry, it's saying.
39:00 Ravi: So, SMA more than 200 on Feb 15th. And then Feb 17th, uh, what is, was SMA less than 200? Is it, is it actually that case?
39:11 Ravi: 200 SMA is 447, SPY was 237. I'm looking at row 26. So, yeah. So, it, it went down and then you, next day it was again up.
39:24 Ravi: So, it went up, next day it was again down. Two days later, so, it went down. Yeah. This is like, volatility is like killing it like crazy.
39:34 ameeshkatariya: Yeah. So, most, you know, all, all bull range strategies, right? When the volatility kicks in, they start underperforming. So, uhm, that's what I can see here as well.
39:45 ameeshkatariya: Like, it's just going up and I think it's a consolidating. It's
39:48 Ravi: not terrible. I think April, April once, March once, March twice, Feb twice. I think four, five times it did. And then, in April, what did it do?
40:00 Ravi: Finally, it went to Cashmode and stayed in Cashmode the whole year.
40:05 ameeshkatariya: Yeah. It's till November. Yeah.
40:08 Ravi: Till, till November, December. And then in December, it went, uh, to Bullmode for, uh, for a, for how long did it go?
40:18 Ravi: And then, uh, I'll
40:19 ameeshkatariya: play this. And
40:20 Ravi: then,
40:21 ameeshkatariya: yeah, yeah, yeah. It back
40:22 Ravi: to Cash again. And then in 2023, it went, again, played up and down a little bit. And then, then it went into bull mode on 23rd of, 23rd of January.
40:38 Ravi: And then, uh, and then it went to defensive, defensive to bull, and then bull to cash again. Then in March, and then cash to bull, bull to cash, cash to bull, again 2023 also it monkeyed around a little bit in March, and then it went in, uh,

June it went to bull.

41:03 Ravi: Correct, correct. March and June, it stayed in bull for a while there.

41:09 ameeshkatariya: Yeah.

41:09 Ravi: Uh, June bull, bull trimmed, bull, bull defensive, August defensive to bull, bull defensive. Uhm, December cash, bull, uh, October bull to cash, cash to bull, bull, bull trimmed.

41:29 Ravi: Okay, so there, I mean, it played around, when it is around 200 days, yeah, we had to pick. Some value.

41:37 Ravi: What do you think, Sudhir? We had to pick some number to kind of hang our hat on.

41:42 Sudhir Vyakaranam: Do you guys have any suggestions on what else can we do? Because, again, you know, the whiplashing is quite a bit, particularly, again, you know, in a war.

41:51 Sudhir Vyakaranam: So, is there, again, you know, something like ADX or some other indicator, again, you know, that in your experience can be used?

42:02 ameeshkatariya: See, in general, in my, in my opinion, if we are trying to get in a directional statistical model, like Jesus Bull, we should kick in ADX, but now, as far as the ADX goes, I think this is totally up to us how we experiment, because ADX works really well to tell how strong the direction is.

42:21 ameeshkatariya: So, if we can use it to our favour, yeah, I think ADX, ADX is a good one. Uh, maybe we can play around the SMA.

42:27 ameeshkatariya: So, uh, in general, we could also play around with the 200 SMA value. Uh, if you guys have had experience with 200 SMA, or empirically, if you have seen that 200, maybe 200, 500 SMA, maybe 195 works better.

42:42 ameeshkatariya: We can try out a bit with the window length. It's, uh, not that, uh, uh, it's not, I won't say that I could have a eureka moment with 195 or 204, but of course, with a particular strategy, with a particular asset, you never know, how even you shifting the window by a 2 or 3% margin can change the results

43:00 ameeshkatariya: . So I can try it on with that. Maybe the, maybe in the consolidating phase of the market, if we change the window lens a bit and also kick in, uh, the, let's say, uh, what I could do here.

43:12 ameeshkatariya: Is that when we have multiple re-entries, Defensive, Trim, and then Cash, and then Bull, and then, you know, the conditions are almost happening daily.

43:20 ameeshkatariya: We can kick in ADX, and we can say that if the trend is not

strong enough, you stop for a while, and as soon as the signal is lengthened out, like we get it after a point, we know that the market has again attained a direction, and then we can start kicking back in.

43:34 ameeshkatariya: So we can skip these, uh, consolidating phase in the market, if that's what you want.

43:39 Ravi: Right. And also, the other one I saw

43:44 Sudhir Vyakaranam: Part of this again, you know, I think where the volatility can help us would if we can add in the short strategy again, you know, that's where I think you can cash in some of that volatility as well.

43:54 Sudhir Vyakaranam: If the VIX is high again, you know, if you're sitting in, if you can calm down again, you know, not going to trade again, you know, you just sit on the short until the VIX comes down to less than 10 or I'm sorry, less than 20 or something like that.

44:05 Sudhir Vyakaranam: And then again, you know, probably, even though you missed out a little bit on the rally again, you know, you, you captured some of that, you know, uh, the inverse VIX.

44:14 ameeshkatariya: Yeah. Yeah. No, I think. The thing here is that, uh, we'll never be able to time the consolidating phase. So every time we are, so let's say we kick in ADX and we missed, so let's say we go that, okay, this seems like a volatile phase.

44:32 ameeshkatariya: We won't, uh, do trace for it, we are most likely going to miss a bit of the rally. So while we get safer that we're missing the volatile phase, I'll also put it there, that we'll miss some of the rally.

44:42 ameeshkatariya: So I think the better way would be to, for me to run the backtest and we'll see, uh, if we are running a very large chunk of the rally phase.

44:48 ameeshkatariya: We can it or if so, uh, to be very honest, if the volatile phase is not giving us a very, uh, bad return in loss percentages, we can anyways keep it because that allows us to capture the entire rally range, but if removing it still keeps a larger chunk of the return safe, then of course we can shift

45:08 ameeshkatariya: to, you know, avoiding the volatile phase.

45:10 Ravi: But, but this can't be based just on 2022, obviously. So we have to look at 2020. All the years. All All the stuff.

45:18 Ravi: That's one. And, uh, and one more other thing is, uh, one, one strategy that was mentioned to reduce volatility is rather than buying it as soon as it crosses 200, wait till it's 1% more than 200 kind of stuff.

45:31 Ravi: So I get it a little bit more leg kind of stuff on the upside. one more

thing I've seen somewhere as an option, but those are all things we can play with.

45:41 Ravi: But I think honestly, even though it's whatever number we pick 190 days to 20 days, they will be times in 50 years where they're in, the spy will be hogging that up and down for a

45:57 ameeshkatariya: few months.

45:58 Ravi: And honestly, even though we are buying and selling, it didn't look egregious to me in 2022, based on the numbers I'm seeing here, because it did like six months.

46:09 Ravi: Six times, which is not bad for such a bad market that we're drawing up and down. And it's stabilized. It did it for a month, five, six times, and then it said no, and then stayed away from it for like eight, nine months.

46:23 Ravi: It's not bad. And the second thing. Like Sudheer mentioned, once we, if you're able to add short strategy to 2022, instead of minus 32, that might be zero or minus 10.

46:37 Ravi: And that makes all the difference. Absolutely. Because you don't have to. Yeah, because the

46:43 ameeshkatariya: only year where we have complete negative returns is 2022. Now, uh, so if we have the defensive shots or the predatory shots that you guys have added, which we'll add in the backtest again.

46:57 ameeshkatariya: Then, uh, I think we could observe better returns. But of course, I'll get down to the backtesting. I'll let you know.

47:03 ameeshkatariya: In general, in the markets, it's a rule. If it works, it works. If it does not, then, you know, pick it up.

47:07 ameeshkatariya: So, yeah.

47:08 Ravi: So there, uh, so there, uh, just to give you a perspective, so there, uh, this, uh, last two weeks, uh, with, with all the volatility, I was trying to follow the strategy.

47:17 Ravi: And, uh, the, I did not have, uh, for the strategy, we were supposed to buy the short S&P 500. And I didn't have the boss to do it because I knew that 5 minutes later, if Trump tweets, the index could go up, like, 4-5%, pi could go up 4-5%, and it would just kill any short that we are in the market for

47:44 Ravi: , especially shorting, uh, UPS. That's why I didn't have the guts to do it, even though our rules said we could do it kind of stuff.

47:51 Ravi: And likely so, last night, it's like, out of the blue, he just did it, and next thing you know, the market just rallied like crazy today.

47:58 Ravi: And, uh, one week ago, I was thinking the market was going to rally

when he was going to give the speech.

48:02 Ravi: I thought he was going to say, we're going to close everything and, everything, close the fight, stop the fight. I thought market was going to rally that day, and he obviously did the opposite that day.

48:13 Ravi: So it's just, so I think, I think, uh, Sudhir, I think you are proponent of, of using common sense on top of this algorithm kind of stuff.

48:22 Ravi: I think that is true this week. That is true this week for sure.

48:28 Sudhir Vyakaranam: Right. So one of the things with short would be big size, as Ravi mentioned again, you know, if you're short in the market, again, we should, you know, doing it right away instantaneously.

48:36 Sudhir Vyakaranam: Okay. Rather than again, you know, buy or sell. Um, uh, I don't know how we can do that if we are doing T plus one, uh, for, um, no, if you're using T plus one for, you know, buying or selling.

48:52 Sudhir Vyakaranam: It's

48:52 Ravi: not, it's not a big deal. Let's, let's get the strategy first with this and then. Sure.

48:56 Sudhir Vyakaranam: Okay. That's fine. One,

48:57 ameeshkatariya: one, uh, element that I'd like to mention to both Ravi, I think what he, what Ravi mentioned, right, that, uh, a little common sense on top.

49:06 ameeshkatariya: In general, whenever the markets get too volatile on a macro basis, that can be the only thing that can see that really well is a human brain.

49:15 ameeshkatariya: At the end, all indicators fail down because they're all numbers. So at points in time where the market seems to volatile, like usually when the Trump goes very active, you should stop the bot and start it after a while.

49:26 ameeshkatariya: I think that's the best solution that you can find out there for this, yeah.

49:31 Ravi: Yeah, and, uh, and, okay, fair enough. Uhm, this is, uhm, uh, this is, uh, uh, I, I like the, I like the data points you have, I mean, it's very intuitive and supportive.

49:44 Ravi: The, the logs are also looking good. Uhm, so, Sudhir, next steps?

49:49 Sudhir Vyakaranam: Next steps, I think, uh, we'll have to add in the, uh, VIX or the shared shorting strategy and kind of see if that's the use of

49:57 Ravi: the, you

49:57 Sudhir Vyakaranam: know, uh, returns. That's one. And, uh, one of the

concerns, again, you mentioned we are only looking till 2018, but that's a very biased period.

50:07 Sudhir Vyakaranam: Again, you know, I think since Trump came in 2016, the market had been gone up quite a bit. And, you know, 2015 was a bad year.

50:13 Sudhir Vyakaranam: I think 2011 was bad. I think 2011 or 2012 was a bad year. So, again, you know, if we are able to start from 2011, at least, again, you know, leave the GFC out and then

50:24 ameeshkatariya: at

50:24 Sudhir Vyakaranam: least the last 15 years, that would give us a decent perspective. Again, we are still missing out, you know, GFC kind of a scenario.

50:32 Sudhir Vyakaranam: But, uh, with these leverage strategies, we need a little bit wider horizon.

50:38 ameeshkatariya: Yeah, no, I think I got your point. If we start from 2011 and we also add the annualized, you know, annualized returns on the graph, you will be able, and even if we start from 2011, because now we are adding the annualized returns, we'll know that in these particular years, the strategy was underperforming

50:52 ameeshkatariya: . Now we compare that with the actual market conditions and where it's performing well, we compare that again with the market, because we have phases in between.

50:59 ameeshkatariya: It's a long-term, short-term death cycle thing always. So in what cycle did the strategy perform the best, we can figure out from the annualized returns.

51:07 ameeshkatariya: And then, you know, we can get down to more analysis.

51:09 Ravi: So, so I would say you did step one and step two here. Step one and step two. Step two, uh, like you mentioned, 2011, 2012, you mentioned, I'm pretty sure you can go back to 2011 and 12 for this step one and step two, because you pro and TQQ data is there.

51:24 ameeshkatariya: Number one.

51:25 Ravi: Number two, for this long, not now, that would be step five or six for this long-started strategy, it's very easy to create synthetic QPro.

51:34 Ravi: Like I was mentioning earlier, there's formulas if you Google it, it's very, just two, it'll have only three variables. So a lot of people have recreated synthetic QPros.

51:43 Ravi: Just for the long strategy, I think it's very easy to create synthetic QPro and synthetic TQQ and go back to like 1980 onwards kind of stuff or something

like that.

51:52 Ravi: Some, some crazy stuff, crazy backward, uh, different states kind of stuff, just for as long as we are at it, it's only a smaller edition to kind of do that.

52:02 Ravi: So we'll, we'll see. So pick your help for that later on also, but first is 2011, 12 also is needed for this long strategy and then long plus short from 2018.

52:14 Ravi: If you can, and maybe you should write down, we should write down these questions so that we can follow through next time.

52:19 Ravi: So, give me one second. I'm writing down, uhm, 2011 long results and then, uh, 1980 Synthetik, Synthetik Q Pro.

52:37 Ravi: And then, and then, uh, short from 2018 on. And then, uh, question would be, and this one is for later step 10, Synthetik, SVIX, is that an option?

52:54 Ravi: I don't know how to create Synthetik, uh, SVIX, Synthetik, uh, of that one. We can, we can look into that later on, uh, SVIX, SVIX, uhm, and then, uhm, uh, and then, now, what other, add other variables like ADX, ADX.

53:16 Ravi: Okay, I wrote 5, 6, I'll, I'll forward it to the group here. So, I think, uh, those were some of the questions to, uh, answer.

53:24 ameeshkatariya: Yeah.

53:27 Ravi: So, Sudhir, I heard your next steps. Uh, Anmol and Amish, what, what are your next steps? What do you want to do next after this?

53:35 ameeshkatariya: I think, as you said, we'll kick it into step 3 and step 4, adding the short part. I think that should be the, that should be the first priority.

53:42 ameeshkatariya: I think Anmol, you can go ahead and tell what is, yeah, cool. Okay. Yeah.

53:47 Ravi: Okay. So short, do that. And also, and also run this from 2011, this long.

53:52 ameeshkatariya: Yeah. Yeah. Both of them.

53:53 Ravi: Both them.

53:53 ameeshkatariya: If you change the data range, as well as, we'll add in the shots to

53:57 Ravi: discuss on the

53:58 ameeshkatariya: next call.

54:01 Sudhir Vyakaranam: So one question, again, you know, is there any way in the data, do you have like the put call ratio or option ratio that, again, you know, because some places I've seen like put call ratio seems to have a little bit more predictive value in, you know, going to the market, uh, you know, tips or something

54:16 Sudhir Vyakaranam: like that. Is there any place that you can get that and

put call ratio?

54:21 ameeshkatariya: We can look into it for sure.

54:23 Sudhir Vyakaranam: That's something I can, you know, because and, you know, a bit more nuanced, you know, when we do the, you know, short strategies with Wix, we can probably think about that.

54:32 Sudhir Vyakaranam: Yeah.

54:33 ameeshkatariya: Got it.

54:38 Ravi: So that's helpful. Uh, Aamish, could you tell a little bit about your background, what you've been doing? I know Anmol mentioned.

54:44 Ravi: About you in the past that he'll involve you. Tell a little bit of your experience on what you do.

54:49 ameeshkatariya: Okay. So, uh, I am, uh, I graduated last year college. I've been freelancing for the last three, two and a half, three years.

54:57 ameeshkatariya: Uh, my family has been involved in the markets for a very long long time. Like my grandmother was involved in the stock markets for nearly 40 years.

55:04 ameeshkatariya: So that's what got me into the markets in the first place. And I completed my engineering in 2025. Uh, so it's been a wild journey.

55:13 ameeshkatariya: I have, I chose freelancing as my first career option. So I've been freelancing since then. I freelance in a lot of domains, but trading bot is something that I'm personally interested in.

55:22 ameeshkatariya: So yeah, that's a bit of my background. I live in Pune in Maharashtra. I've been living here since the past 20 years.

55:30 ameeshkatariya: I'm originally from Jodhpur, which is in Rajasthan. But because my parents shifted here a long while back, so I've been here since a long time.

55:37 ameeshkatariya: But yeah, I like the weather here much better than any other place. I've been to Hyderabad. The food was really good, but the weather, it hits you over.

55:48 ameeshkatariya: I mean, it hits you Even in Mumbai, like, I go almost 6 or 7 times a year. The only thing that hits me is the humidity.

55:56 ameeshkatariya: I'm not really used to the humidity because my birthplace was Jodhpur, which is very dry. It's either cold AF or it's very hot.

56:04 ameeshkatariya: So, that's, I

56:06 Ravi: think, a

56:20 Insight Fusion Analytics: So, with a completely new strategy that will beat

this.

56:24 Ravi: Sure.

56:27 Sudhir Vyakaranam: Why not? End of the day, we are here to make money again. You know, we are not married to any particular strategy.

56:32 Insight Fusion Analytics: Exactly. So, yeah, we'll just get this out of the window first. Like, let's complete all the variables. Then, uh, you know, my team would be open to, how do you say, beat, like, this, this will set the benchmark and then let's see if we can beat that.

56:46 ameeshkatariya: Yeah.

56:47 Ravi: Okay. Sounds good. Uh, follow up. When do you guys want to do the next follow-up?

56:54 Insight Fusion Analytics: Uh, it, the, adding the next layers is a little tricky, so we will take at least a week, but if there's any, uh, changes, then, uh, we will update you.

57:04 ameeshkatariya: Yeah, if we can do it quicker, I mean, we'll let you know. Wow, but just one question, Sudhi, you are also based out of the US?

57:10 Sudhir Vyakaranam: Yeah, I'm also here, yeah. I'm Ravi's classmate in Gandhi, from, uh, Hyderabad. So, I live near Chicago in a place called, um, you know, South Bend, which is, like, you know, a couple of hours away from Chicago.

57:25 ameeshkatariya: Okay, so you are near Chicago and Ravi, you are near,

57:27 Ravi: uh, Florida. Florida.

57:30 ameeshkatariya: Nice.

57:31 Ravi: Jacksonville, Jacksonville, Florida. So, um, yeah, why don't we do this? Uh, the next weekend I'm a little bit, uh, tied up, uh, with work.

57:41 Ravi: Uh, so if possible, uh, next Wednesday or Thursday evening like this would be ideal for us. But if you need longer than that, just text us and let us know.

57:51 Ravi: We are, uh, Anmol, you have seen our, uh, you've, uh, communicated with us a little bit. We blow a little hot and cold.

57:57 Ravi: Um, so keep us in the loop and, uh, timely, uh, Atlassian, because we will, we are sometimes hot for like, uh, seven

58:06 Insight Fusion Analytics: days and

58:07 Ravi: then we go sad after 30 days. That's our personalities. So, so, so, uh, You guys, we've got

58:11 Sudhir Vyakaranam: 10 different things going on at the same time, including our main profession and, you know, family.

58:16 Insight Fusion Analytics: So, okay. Okay.

58:17 Ravi: Please,
58:18 Insight Fusion Analytics: uh, uh, we are, we are here so that please, you can, uh, go cold anytime. Let us take care of it.
58:25 Ravi: Yeah. Let's try to, we get excited when we have,
58:28 ameeshkatariya: uh, I mean, we should get the hot phase once a week, maybe that way we can collaborate and get to the results.
58:36 Ravi: Let's, let's do formally, let's, let's plan tentatively next Wednesday or Thursday and if you need to push it out, uh, by week, just let us know.
58:44 Insight Fusion Analytics: Sounds good. Sounds good. Thanks. Okay.
58:47 Sudhir Vyakaranam: Thank you.
58:48 Ravi: Can you guys share the logs, uh, it in, uh, email or something rather than WhatsApp because sometimes it's harder to download from WhatsApp.
59:01 Ravi: Sounds good.
59:03 ameeshkatariya: Sounds good. Thank you. Thank you so much. Have a good dinner, guys. Bye-bye.
59:09 Insight Fusion Analytics: Okay, then. See you guys. Bye.

Meeting Recording - April 16, 2026

0:00:00 Insight Fusion Analytics: This meeting is being recorded. Hi Ravi.
0:00:15 Insight Fusion Analytics: Good evening. Good evening to Can you hear me? Hello. Amish, can you hear me?
0:00:29 ameeshkatariya: Uh, yes, I can hear you.
0:00:36 Insight Fusion Analytics: Can you
0:00:36 Ravi: guys
0:00:37 Insight Fusion Analytics: hear me? Yes, now, now we can
0:00:41 Ravi: hear you, Ravi. Okay. Is, is, uh, Sudhir now joining us? He's gonna join. Okay. Let me give him a, Thanks I'm not going to reach him so we probably can get started and we can refresh him when he joins in the interest of time.
0:01:17 ameeshkatariya: If you want
0:01:18 Insight Fusion Analytics: to wait for a couple of minutes.
0:01:20 Ravi: Okay. Bye. Uh,
0:01:49 ameeshkatariya: also, Ravi, there was, uh, one gap. On step three, which was that, uh, the exit SPXU was not clearly specified.
0:02:04 ameeshkatariya: So I just assumed that it's less than, VIX less than 30. Uh, is, was, was one. And then that the spy, you know, the SP, it reclaims 50 SMA

were the two conditions that we assume because that those two were not mentioned for step three specifically for, for the SPXU predatory short.

0:02:23 ameeshkatariya: So, yeah.

0:02:25 Ravi: Let me look it down.

0:02:35 ameeshkatariya: So all the entry conditions were there, right? That when are we supposed to enter? And again, the same executed next morning, 50% ideal cash into SPXU.

0:02:48 ameeshkatariya: So all of those were there, but, uh, the exit conditions are not exactly specified. That was something on the call.

0:02:55 ameeshkatariya: I think we discussed that. You'll specify later. So for now, uh, we've used our assumptions and of course we can change.

0:03:02 ameeshkatariya: And there was one more thing that I wanted to clarify from last time, which was, uh, we said that it will not go to the defensive trim.

0:03:10 ameeshkatariya: Thank you. It's, you know, it starts retracing. So then we go a hundred percent into, uh, into, we'll be a hundred percent by it, but then we won't trim it to 50% the next day.

0:03:27 ameeshkatariya: So I had a thought that. That would mean that we'll never trim, right? That, that, that mean that, uh, just in case if the conditions shift to a defensive trim, we'll still ignore it just because we were going up and we bought a hundred percent and in the longer term, it may be might, as I discussed

0:03:46 ameeshkatariya: in the last meeting, also that it might mean that we are indefinitely pausing it to never going back to 50% trim.

0:03:54 ameeshkatariya: So now I've just created a counter that that defensive trim will be delayed by a specific number of days. So either it can be.

0:04:03 ameeshkatariya: Or five days or 10 days. If you want it to be extended, we can extend it to five, 10 days, whatever, you know, works by you.

0:04:10 ameeshkatariya: So I think that would be a

0:04:11 Ravi: slightly better. Let's do, uh, I think let's do like 60 days. 60 days. The reason I say that, the reason I say that is most of the downstream that happens for it to, for the upstream, it takes like, usually 20 days is in my mind and jitterily looking at the points.

0:04:31 Ravi: So let's do 60 days so that, you know, we are in full, we'll work it out, kind of stuff.

0:04:35 ameeshkatariya: Okay, okay, okay,

0:04:50 Ravi: Where did I, where was the document that I sent my, uh, I'm looking at messages here, uh, where I sent the rules.

0:04:59 Ravi: Do you have, uhm, let's see, I'm trying to find the rules of the document. One second. Yeah.

0:05:22 Insight Fusion Analytics: Can I send it again?

0:05:23 Ravi: Yeah, if you don't mind. Yeah. Are you sending it in WhatsApp? The same masternode?

0:05:32 Insight Fusion Analytics: I mean, it's version 1. Is there like a version 2 or something?

0:05:37 Ravi: Yeah.

0:05:37 ameeshkatariya: Yeah. Oh, OK, OK,

0:05:40 Ravi: got it, got it. It's in this, uh.

0:05:54 Insight Fusion Analytics: This is sent by you, right?

0:05:58 Ravi: The, yeah, this is, you're talking about what you just posted now?

0:06:05 Insight Fusion Analytics: Yeah, yeah.

0:06:07 Ravi: This PDF document obviously was created by you guys, right? So, I, uhm, this was a proposal from you guys, right?

0:06:15 Ravi: Based on what I asked. Yeah, most of

0:06:17 ameeshkatariya: the PDF documents were from your side. I think most of the input we got was from the Loom calls. Because we understood a lot.

0:06:24 ameeshkatariya: Like, wherever we were, your Zoom calls, wherever we were talking. And a few references from you, and then we picked all of those up, combined, and then we sent you the doc.

0:06:33 Ravi: Yes.

0:06:33 Insight Fusion Analytics: No, I was just confused. You sent it, so I was

0:06:35 Ravi: wondering whether you, Yeah, Yeah, let me, let me, yeah, let me look quickly at this. You probably did a, And also, Ravi, I just recalculated.

0:06:54 ameeshkatariya: So when it was two days right, the overall return of step 1 was 161%, which I showed last time, with a CAG of 20.3.

0:07:08 ameeshkatariya: But if we do 60 days defensive trim, then it becomes 23%. And for step 2, which is uproop plus 3 to plus triple Q, the CAGR, which was 20.4, at two days, becomes 22.6%.

0:07:22 Ravi: Okay, so that adds, right?

0:07:24 ameeshkatariya: It increases. It

0:07:28 Ravi: just takes two lines, two lines of code, so that it's easier for us to reference back. Can you just text it in the master group?

0:07:36 Ravi: I know it's not formal, just so that it's, you have some idea to go on.

0:07:41 ameeshkatariya: So, the increase, the comparison table?

0:07:45 Ravi: No, no, no, what you, the statement you're just made.

0:07:48 ameeshkatariya: I, I,

0:07:49 Ravi: I'll do that. The CAGR increase from 20 to 21.

0:07:52 ameeshkatariya: No, I'll just, I'll just send those tables, right? I think that will be.

0:07:57 Ravi: Either way is fine. Uh, different, uh, cache, It's broken. Brrrr. Uh, state machine. Okay, short, specific, okay.

0:08:14 Ravi: Specs, let's send, uh, both my, deploy 50%, sorry. Okay, exit condition, uh, in this one is VIX less than 30, sell all XPXU, return to 100% cash.

0:08:28 ameeshkatariya: Uh, in the, in the,

0:08:31 Ravi: in the master, in the, in the proposal, you guys sent in 6.3, short

0:08:37 ameeshkatariya: sale specific. Yeah, yeah, yeah. No, that's what I'm saying. So

0:08:40 Ravi: what

0:08:40 ameeshkatariya: you

0:08:40 Ravi: said, what you said is looking good. What you said is appropriate. Yeah.

0:08:44 ameeshkatariya: Okay. Got it.

0:08:45 Ravi: Yeah. Less than 30. You said, I agree with that. And then, uh, um, SPX. Reclaims, uh, so exit one is, uh, if VIX is less than 30, yes, you exit.

0:08:58 Ravi: If VIX is more than 30, but SMA 50, it crosses SMA 50, which it never does. Sell all experience. So to exit either one or two, either one or two condition kind of stuff.

0:09:11 Ravi: Yeah,

0:09:13 ameeshkatariya: correct. Yeah, that's exactly what I've used here as

0:09:17 Ravi: We agree. That sounds reasonable, right? Uh, just looking at that, uh, yeah, we're looking at VIX predominantly and X, the SMA 50 is never breached.

0:09:26 Ravi: If, if VIX is more than 30, it just doesn't happen. But if it happens, we'll, we'll, uh, we'll, uh, we'll, uh, we'll be aggressive kind of stuff.

0:09:35 Ravi: We'll, we'll sell it, sell the short strategy. And then,

0:09:38 ameeshkatariya: uh, okay. I also sent the results on the group, the comparison when it was two day and now when it's 60 day.

0:09:50 ameeshkatariya: So I just thought that I quickly confirm it on the call. It

0:09:53 Ravi: comes much easier. Yeah, that's nice. But

0:09:58 ameeshkatariya: the, just the step three results were not that great.

0:10:03 Ravi: Okay. Okay. Okay. That's fine. Uh, let's, uh, let's move. I think it's a

nine 41. Let's move on.

0:10:10 ameeshkatariya: Yeah.

0:10:11 Ravi: I think so. And I call him and text him. He might be tied up with something. I'll share

0:10:18 ameeshkatariya: my screen.

0:10:20 Insight Fusion Analytics: The meeting is anyway getting recorded. So if you want, I can send you the meeting recording.

0:10:27 Ravi: That would be nice.

0:10:29 ameeshkatariya: Can you see the chart?

0:10:31 Ravi: Uh, I actually ended up going to WhatsApp for whatever reason. Give me one second. Let me go back to Zoom.

0:10:39 Ravi: Uhm. Zoom, Zoom, Zoom, Zoom, Not here. Sorry, one second. No, here is it. OK, OK, I see the chart.

0:11:07 ameeshkatariya: OK, yes. So this is step three. And this is where the bull phase is inactive, right? It's only. Only Cache Hider or Cache Short, Cache plus SPXU Short.

0:11:20 ameeshkatariya: So this was, this was.

0:11:21 Ravi: And this was run from when? When did this run this strategy from?

0:11:25 ameeshkatariya: Again the same, 2020 to 2025, that October 2022-2025. Yeah, yeah, And we ended up losing 5%. So this was to test, right, that if there was only the short phase, would it become loss-making or would it get us money?

0:11:45 ameeshkatariya: But it, here it seems that it was, it was a, it was a loss-making effect.

0:11:50 Ravi: Do you have a log? Do you have a log? Yeah, yeah,

0:11:53 ameeshkatariya: I have a log. Let me share that as well.

0:11:57 Ravi: And that, uh, that, uh, that graph you showed is a combination of long plus short.

0:12:03 ameeshkatariya: No, this is just. Oh,

0:12:05 Ravi: just expects you, nothing else? Yeah, nothing else. This is not on top of the long strategy.

0:12:13 ameeshkatariya: No, no. So on top of the long strategy, which is combined, everything up is step four. So I'm just wrapping that up.

0:12:20 ameeshkatariya: But I, I, I have, I think it'll take me a few more days for, uh, to wrap up everything. But, uh, as far as I've seen in step four, things look a lot better combined in my testing.

0:12:33 ameeshkatariya: I'll give you a short idea as to how much I've completed.

But so far step four is still, the entire combined thing is still a work in progress.

0:12:41 Ravi: Just to be clear, it's a step right now we are doing XP, XU only, or are we doing XP, XU and SVX.

0:12:52 Ravi: That's right. No,

0:12:52 ameeshkatariya: only XP, XU.

0:12:55 Ravi: So then we have to do the second short strategy and then add all three combined, correct? Long, short one and short one.

0:13:04 Ravi: Correct,

0:13:04 ameeshkatariya: correct, correct. Yeah.

0:13:06 Ravi: So this is pure short strategy.

0:13:08 ameeshkatariya: Yes, this is pure short one. Yeah, I will show the trade log as well. I'll just share my entire screen.

0:13:17 ameeshkatariya: Can you it? So, again, if you see, it's CASH IDLE, CASH SPXU, CASH IDLE. So, this was meant for us to see that whether the predatory shots work.

0:13:33 ameeshkatariya: But, ah, these

0:13:34 Ravi: mostly, It's what they're, I mean, I'm. I'm looking here. How many trades were there? Were there a lot of trades?

0:13:39 ameeshkatariya: No, no. It was hardly, I think, 47 of them in total.

0:13:45 Ravi: Or, so, so in 2020, there were some trades, I take it?

0:13:49 ameeshkatariya: Yeah. In 2020, there were about. Here, 21 trades in total.

0:14:00 Ravi: So can you, can you just show me where the first XPSU buy was? Buy XPSU, yes, I see that now.

0:14:06 Ravi: March 2nd, April 17th. Sell, buy on April 28th, sell on April 27th, buy on 28th, sell on 29th, uhm, can you scroll down?

0:14:19 Ravi: I can't, oh, I can move this. Oh, even I can move this. Okay, got it.

0:14:22 ameeshkatariya: Oh, you can?

0:14:24 Ravi: Yes. Surprisingly.

0:14:25 ameeshkatariya: Okay. Oh, and oh, I, I was zoomed in. So maybe that part you can,

0:14:30 Ravi: yeah, for whatever reason. Oh, okay. The zoomed in part, maybe. Yeah. Zoomed in, I'm able to move. Um, so, um, so, and then, um, maybe, hey, it was buying and selling.

0:14:43 Ravi: What? Why? Why is it buying and selling so much? Uh, what was the rule? The rule was, uh, I had to go, let, let me look at the rule once more.

0:14:58 Ravi: Uh, but, uh, May, June. Okay. In June, it calmed down. January

2020. Okay. I suspected 22. It'll trigger 22 trigger.

0:15:07 ameeshkatariya: 22 were the most major ones, to be honest. The rest, it was pretty low.

0:15:13 Ravi: Yeah, it should be zero, just because it was not in a short, uh, stuff. There's, um, only those two years were active, I think.

0:15:19 Ravi: Uh, so it exited, uh, okay. Let me look at 2022 trades. Uh, 2022. January, January, January, January 25, it triggered because we were in cash and Wix was more than 30, so it triggered and Wix came down, so it sold, Wix more than 30, bought again, Wix less than 27.

0:15:45 Ravi: It sold again, Wix, Wix was 29, so sold, Wix was more than 30, bought, Wix less than 30, it sold, so it's like Wix sold.

0:16:01 Ravi: Wix was hugging 29 to

0:16:17 ameeshkatariya: For all the steps, we could also try a range, maybe later on, but this is just an observation. So we can note down all the observations together and maybe at the end we can go for the optimization.

0:16:27 Ravi: So what was the category? I see the trades, they, they, now 2022 trades were very

0:16:32 ameeshkatariya: appropriate.

0:16:33 Ravi: 2020 trades, let me zoom in once more now that I understood the, what, this one. 2020, can you go to the beginning of 2020 when the trades started?

0:16:45 ameeshkatariya: Yeah, yeah.

0:16:47 Ravi: Okay. Should

0:16:48 ameeshkatariya: I share the file with you?

0:16:49 Ravi: Yeah, yeah, go ahead and share, email it or something, or WhatsApp is fine too, either way is fine. So Spy is, ah, so Wix was more than 40, but it breached 50 days of May, so it sold it, and then it bought it again, ah.

0:17:05 Ravi: Because Wix was, ah, Spy was less than 200, Exited because SMA was breached, 50 days was breached, Shot, Exit, Exit, 50 days SMA was, is consistently being breached, and, so, ok, that's fine, so, we can, we can clean it up later on, ah, the, the way to clean it up would be, ah, if you make a trade once

0:17:30 Ravi: , because it's a short strategy, if you short it once, don't trade for 30 days, if you put, we'll be done, I think, because we are not wanting to whiplash.

0:17:37 Ravi: We just want to catch one big fall, kind of stuff. So if we caught one big flash, you know, we, ah, I think that's more than enough.

0:17:46 Ravi: Or, or, we can, or, we can put a band, uh, you know, 30 days. If it, if

you did a trade for Wix 30 in the last 30 days, don't do a trade till Wix, don't buy again.

0:17:59 Ravi: You know, if, if you did this trade once, then don't do this trade again unless Wix more than 40 or something like that, you know.

0:18:05 ameeshkatariya: Yeah. Yeah. It's 30 more, 30 less, 30 more, 30 less. And it just keeps, uh, oscillating between the two.

0:18:14 Ravi: You can choose one of those things, you know, instead of, we don't want 40 trades in two years. We want four trades in two years.

0:18:22 Ravi: You know, all that, because we don't want all, we're catching all the noise. So I think 30 is too clean of a, too narrow of a stuff.

0:18:28 Ravi: So we can say, if we can write, I don't know if it is possible to write, say, this 30, we can leave and say, in the last 30 days, we already did one trade.

0:18:38 Ravi: Then, uh, you only trade if it is more than 45 or something, which is more than 45 or No,

0:18:43 ameeshkatariya: we can do that. No, that's so, we'll just implement a counter from trade.

0:18:47 Ravi: Yeah.

0:18:47 ameeshkatariya: When trade ends, it keeps iterating. Once it hits 45, the condition gets back into performance.

0:18:53 Ravi: Yeah. Or we can say for 30 days, you keep your mouth shut and then re-evaluate in 30 days and then buy one more because we are not starting again and again to grab 2-4%.

0:19:04 Ravi: We are shorting to grab like 30%, uh, 20%. Heavy, because in 2020, in 2020, if, I'm kind of a little surprised because in 2020, why did it not, show me the 2020 log again, when did the first trade happen?

0:19:24 Ravi: This is 28th of February. Yeah, March 2nd. Okay. So does it show how much we bought and sold for one second?

0:19:33 Ravi: Yes, we did a

0:19:33 ameeshkatariya: 20% target allocation.

0:19:36 Ravi: Okay, fair enough. Executive price 24 and then 16, we sold at 16. Uh, we bought at, the first buy was what?

0:19:46 Ravi: What price did we buy for? \$24? Is that what it says?

0:19:52 ameeshkatariya: The, the, the, the price? Yeah.

0:19:57 Ravi: That was what we bought it for \$24 and sold it for \$16. And all the other trades were pennies, I think.

0:20:04 Ravi: This was a big loss trade. Yeah. And we lost, pretty short, SPY Less

than 200, exit

0:20:11 ameeshkatariya: Because there was a gap down. So

0:20:14 Ravi: there was a gap down the next day.

0:20:18 ameeshkatariya: If we, when, if we see that, I think on the chart also, I think I observed even I was, when I was looking at the trade log, there was a gap down the other day.

0:20:30 ameeshkatariya: That's why it's such a large,

0:20:32 Ravi: uh, What is gap down, I don't understand.

0:20:36 ameeshkatariya: The gap down, basically the next day it opened way lower than yesterday's, like the last day is closed. But, but, uh, that

0:20:41 Ravi: is, okay, okay. And what are the dates of those two things, March and 2nd, and what was the other date, uh,

0:20:48 ameeshkatariya: Cell

0:20:48 Ravi: was,

0:20:49 ameeshkatariya: it was, so it was 28th, Feb it was detected, 2nd March it was executed, and then the, and then, uh, the Cell was, I think,

0:21:01 Ravi: March 2nd.

0:21:02 ameeshkatariya: 16th of April, yeah.

0:21:05 Ravi: Okay, give me one second. Uh, Spy, let me look at, uhm, Upro, chart. Let me look at Upro ranges, because, uh, this is, uh, SPXU is opposite of Upro.

0:21:18 Ravi: Correct. And, uh, let me look at, uh, I'm in a different window, you can tell me while I'm looking here the dates all chart is loading.

0:21:38 Ravi: So, uh, five years, uh, looking. What was, uh, You pro, you pro, What was the buy date again?

0:21:56 Ravi: March, uh, 1st or 2nd, right?

0:21:59 ameeshkatariya: It was 2nd March, yeah.

0:22:01 Ravi: Okay. March 2nd. March 2nd, you pro was, March 2nd, you pro was 27. And, uh, when was, uh, March the trade, uh, sold date, uh,

0:22:22 ameeshkatariya: April 16th, 17th, April 16th or 17th, April, somewhere there. The execution was on the 17th of April.

0:22:35 Ravi: Okay. Uh, the symbol is, uh, uh, uh, SPXU, XPE what?

0:22:48 Ravi: XU.

0:22:48 ameeshkatariya: XPE.

0:22:51 Ravi: SPXU. One second, let me just, I'm just looking on, uh, the Yahoo Finance, the numbers superimposed on each other. Uhm, SPXU.

0:23:05 Ravi: Okay. Do you mind going to the logs?

0:23:16 Ravi: I'm in a different windows. I can't go and tell me March 2nd, right? So March 2nd, XBX was 23. What did it say the price was on your stuff for XBXU?

0:23:31 Ravi: The execution price?

0:23:32 ameeshkatariya: Uh-huh. 24.15. 24.15.

0:23:39 Ravi: Okay, 27.24. Okay. And then April 16th, right?

0:23:46 ameeshkatariya: April 17th, the execution price was 16.3.

0:23:51 Ravi: Correct. Correct. That's, uh, correct. And then, uh, you, uh, Pro went down, so SPXU should go up. Pro went down.

0:24:03 Ravi: SP, uh, okay. Okay. That, for whatever reason, the relationship between UPRO and SPXU was not active. As opposite as, uh, UPRO, SPXU was 16.

0:24:20 ameeshkatariya: So mostly the relationship that's supposed to exist. It's not always that they're always working,

0:24:26 Ravi: uh,

0:24:27 ameeshkatariya: because,

0:24:28 Ravi: uh, at a UPRO price of, uh, 27, SPXU was 24. I'm just saying it loud.
27

0:24:38 ameeshkatariya: UPRO,

0:24:39 Ravi: SPXU was 24. Okay. That's when the, the buy happened. Yeah. And 20 from 27 UPRO fell down on April 16th to, uh, 16.

0:24:53 Ravi: Okay. 16. So then UPRO went down, right? I mean, the SPY went down. The XRP went up a lot because a short, it's opposite of UPRO or, uh, this one of, uh, XPXU of SPY.

0:25:08 Ravi: And it actually went down to 16 kind of stuff. So that really is, uh, I'm not having a control.

0:25:16 ameeshkatariya: If have an issue with leveraged assets, you never know the direct, of course, the direction is supposed to be opposite, you know, for example, for SPX, it's supposed to be opposite of UPRO, but the problem is that when the markets are too volatile, everything goes down because at the end it's all independently

0:25:33 ameeshkatariya: traded assets. So if the order book shifts towards a selling side that people don't want to hold this asset at all, it starts going down.

0:25:41 ameeshkatariya: I think that's what happened because of the COVID thing. 2020, March, it bought, and then as soon as the COVID-19 hit, all the markets, no one wanted to hold anything and everything was going down.

0:25:52 ameeshkatariya: So it was a black swan event. So that's why you see everything's going down.

0:25:57 Ravi: Okay, fair enough. I think that one trade we lost 30%. And then, ah, rest of the year, now let me come to your discussion.

0:26:04 Ravi: Oh yeah,

0:26:04 ameeshkatariya: should I say again? I can't hear you. Can

0:26:23 Ravi: you, Yeah. Yeah. Good. Good.

0:26:34 Ravi: Not 2020. We should go to 2022, because 2020, that one trade, we lost 30%

0:26:40 ameeshkatariya: basically,

0:26:41 Ravi: and, uhm, this is, uh, 2022. In 2020. In all the trades there, uhm, 15 by exit, 15.68 by exit, 15.09, by 18.8, sell 16.

0:27:04 Ravi: Thank you for watching. It's almost buy high and sell low is what's going on with this strategy. Okay. It's consistently The exit strategy is something is significantly off, I think.

0:27:20 ameeshkatariya: You see, here, right, we had a marginal gain. Then, here, maybe, we had a very marginal gain somewhere, I remember.

0:27:30 Ravi: This \$1 gain I see at the bottom of that.

0:27:32 ameeshkatariya: Yeah, yeah, yeah. \$43, \$44. This we had a marginal gain here. So, there were fewer gains.

0:27:39 Ravi: The loss is significant.

0:27:40 ameeshkatariya: The loss is significant. I mean, we are losing 5% every year. So, it's, it's more than significant.

0:27:46 Ravi: Yeah, yeah. And what happened, I think 5% every year came because that one trade, we lost 35%.

0:27:52 ameeshkatariya: The entire CAGR redistributed to be more on all years because of that 30% loss, the first trade.

0:27:59 Ravi: One year, one trade in one week, first trade. So, I think the exit, so there's something, the exit needs to be, if we were going to use this, the exit needs to be better than what we had, uh, what is written for, uh, exit

0:28:12 ameeshkatariya: a

0:28:12 Ravi: little earlier, probably, because, uhm, yeah, that's what I think. And then, uh, there is, uh, let me show you what I saw, should I come back

0:28:23 ameeshkatariya: to Zoom?

0:28:24 Ravi: Uh, one second, I'm trying to add something to WhatsApp too. Oh, maybe I can share my screen, right? Okay, give me one second, can

0:28:32 ameeshkatariya: I Yes, you can. Oh, Sudeep. Hi, Sudeep.

0:28:40 Ravi: Share, allow to share, allow to share screen. Okay, you can see my

screen now, guys?

0:28:48 ameeshkatariya: Oh, no, not, not yet.

0:28:50 Ravi: Okay. Share entire screen. Can you see my screen now? You guys can see my screen now?

0:29:00 ameeshkatariya: Yeah, yeah, yeah.

0:29:01 Ravi: Yes, see this March, March 2nd, Sudeep? Sudeep, are you there?

0:29:08 sudhir: Yeah, yeah.

0:29:10 Ravi: Okay. Yes. Hello. Sudeep, the one thing we are deep diving is we looked at the logs, uh, so they did short SPXU strategy only, short only strategy, no long, no long.

0:29:21 Ravi: No second short strategy since, uh, 2020, October, or, or actually early 2020 looks like,

0:29:29 ameeshkatariya: this one was early 2020. I, even I was mistaken earlier.

0:29:32 Ravi: So, so if you look here, so what we noticed this, it's not working. Uh, the exit is not looking good.

0:29:40 Ravi: The entry is looking okay. If you look here, Sudhir, the XPXU is in a light blue, and the dark blue is UPRO.

0:29:48 Ravi: So, March, March 2nd, if you see here, you pro am. It is 27, and XPXU is, uh, 24, 23, 84.

0:29:59 Ravi: Let's call it 24, XPXU. Okay, 24. Can you see that on the top left? O27, that is, O27 is, uh, UPRO, and XPXU, 23, 84.

0:30:09 Ravi: Can you see that top left corner, guys? Anybody?

0:30:13 ameeshkatariya: Top left.

0:30:14 Ravi: O27, it says, that's UPRO, and XPXU, 23, 84, it says, that's XPXU. And the graph, if you come here, oh, actually, I can show you here.

0:30:26 Ravi: See 20, this is what I was talking about, I put my cursor here, now look at UPRO, UPRO line is at 27, which is down here, and XPXU is already up there, at 23, 84.

0:30:41 Ravi: Now, for, fast forward to April's, you guys can see my cursor moving to April, I don't know, it's at April 13th,

0:30:48 ameeshkatariya: 16th, 17th, 17th is the execution date,

0:30:52 Ravi: April 17th, ok, let me go to 17th, I don't know why I can't pull 17th, I'm able to pull, oh here, it.

0:30:57 Ravi: I don't know, it's doing weekly, weekly, ah, this one, just for

0:31:03 ameeshkatariya: kicks, you can change the interval to daily, the interval is one week

0:31:08 Ravi: right now, I can
0:31:11 ameeshkatariya: do it one day, yes.
0:31:13 Ravi: So if you go to April 17th,
0:31:18 ameeshkatariya: so even those values would have changed, right, because those, that was also a weekly value, so you can check that again if you want.
0:31:29 Ravi: Okay, so we'll, I mean, it's okay, it's grossly the same is what I meant, so let's do three months. That, uh, ending, which is early March.
0:31:46 Ravi: Perhaps second trade, okay? So, Eupro was, uh, one, I don't know why, which year is this? This is 2026, okay.
0:31:56 Ravi: Go all the way to 2022. Okay. So, here, what are we
0:32:15 sudhir: talking about here?
0:32:20 Ravi: Yeah, just, just, just listen to this and then I'll, I'll circle back.
0:32:24 sudhir: Okay.
0:32:24 Ravi: So, see this March 22nd, March of 2022, March 7th, look at the trade of Upro, top left figure 355, XPXU 343 it says, look at that.
0:32:40 Ravi: And now, if you go back to March 20, I'm sorry, April 17th um, XPXU is, is, uh, 29 and Upro is 60.
0:33:01 Ravi: Okay, sorry, go back to that log once for me, uh, if you don't mind, uh, I'll show you.
0:33:06 Ameesh Katariya: Oh, okay, uh, just give me a second, actually, the electricity, yeah, the electricity went out on my phone, and if you see, I just shifted.
0:33:17 Ameesh Katariya: Just give me 2-3 minutes, the inverter will
0:33:18 Ravi: kick in. XPXU was, uh, they just checked pure XPXU, nothing else, and, uh, it was minus 5 KG, minus 5 KG.
0:33:31 Ravi: The reason is, it triggered only two times, once in 2020 and once in 2022, and when it triggered in 2012, the first one week, that March trade I was talking at, if you think of it, the UPRO if it goes down, XPXU should go up, right Sudhir?
0:33:48 Ravi: Because its opposite, inverse of, uh, inverse of SPY and UPRO, right? When the UPRO went down over a period of 45 days, XPXU also went down.
0:33:59 Ravi: It didn't go up.
0:34:01 sudhir: The
0:34:01 Ravi: reason is it went up and it came down and we, it sold when it came down. And so basically, uh, from it, it was bought at 24.

0:34:10 Ravi: We bought it at 24, XPXU, and we sold it at 16. Uh, based on the rule that WIX, there are only two rules for WIX, WIX should be less than 30, or SMA more than 50 days should be breached kind of stuff.

0:34:24 Ravi: Those are the two rules. And based on WIX, based on that, it kind of sold, so that sold for what, 35% loss, that one week trade, and that kind of screwed up the whole thing kind of stuff.

0:34:36 Ravi: So, me and Amish were talking and we said that we could, we could, it did lead like 40 trades in a, like whipsawing around 30.

0:34:47 Ravi: So instead of that, if one wanted to use it, we said, we can say, we are only trying to catch, we, we had to tighten up the exit looking at the, at the law, at the Yahoo Finance data there, the time shouldn't go quite high XPXU, we just need to tighten up the exit a little bit, and there's a chance we

0:35:04 Ravi: might catch something, just, just, just to go through, complete the logic for XPXU. Yes. So just pure XPXU in 2022, and 2020, in 2022, we should lose much?

0:35:16 Ravi: We'd lost like 5% or something, but in 2020 we lost, like, 35-40% on one or two trades, so we just need to tighten what we are saying.

0:35:24 Ravi: So when his power comes back, or, uh, later on, just shade, uh, shade the, uh, shade the, logs, so that we can take it.

0:35:34 Ameesh Katariya: Oh yeah, we just need to wait 2-3 minutes, I don't know why it's taking some time to kick in,

0:35:39 Ravi: but

0:35:39 Ameesh Katariya: then we can start again, yeah.

0:35:41 Ravi: No worries, no worries. You have inverted or something?

0:35:49 Ameesh Katariya: Yes, yes, I do, I do, I do, and it usually works just fine. The thing that I live in Pune, right?

0:35:56 Ameesh Katariya: Pune has a lot more unpredictable electricity than Mumbai. I like this about Mumbai that the lights never go out. But here, since the moment the metro construction started, we have a lot of swings.

0:36:11 Ravi: Oh, OK. Oh, Sudhir, so they didn't, uh, they just did pure, uh, uh, SVIX, uh, XPXU, which is a leveraged, uh, short of, uh, SPY.

0:36:25 Ravi: Uh, and, uh, they, uh, next, uh, they were going to give us, uh, VIX. Remember the VIX? We had two short strategies.

0:36:32 Ravi: They didn't do, they'll do the VIX and they'll combine everything. can new kind and present kind of stuff just to look at that.

0:36:38 Ravi: And he did Kager, uh, uh, Amish you were saying, uh, what, what,

uh, what change did we make that we asked last time now I'm blanking the

0:36:47 Ameesh Katariya: change so I'll just explain that quickly that the change was basically that once we go to the defensive trim, right, you said that when we're buying, then we should buy 100% and not go down to defensive trim.

0:37:00 Ameesh Katariya: So, uh, you said that it could be, there was an indefinite counter on it. Like you said,

0:37:05 Ravi: I remember. Yeah, I got it. So, when you have defensive, when you're in pure cash defensive position and you're rebounding, when you rebound, when the

0:37:21 sudhir: supply goes down.

0:37:23 Ravi: So, when you go all in from 0% cash, the 50-day rule is ignored for 60 days.

0:37:55 Ravi: That increased CAGR in WhatsApp, he put it. That increased the CAGR from 20% to 23%.

0:38:02 sudhir: Okay.

0:38:02 Ravi: For long only, for long only, it's a study.

0:38:06 sudhir: It's a study, yeah.

0:38:11 Ameesh Katariya: Oh yeah, awesome, I'll just give a second. I'm shifting there on that call.

0:38:24 Ravi: While you're doing that, give me one second, guys. Oh, yes.

0:38:35 Ravi: Hello.

0:38:41 ameeshkatariya: Just

0:38:42 Ravi: give me one second. Yeah, back in a second.

0:38:46 ameeshkatariya: Yeah.

0:38:49 sudhir: So, Samish, you just do freelancing yourself, right?

0:38:53 ameeshkatariya: Yes, I freelance. I started, uh, freelancing in the third year of college. I went against all odds with my parents, said, okay, this is a good enough career to be in.

0:39:05 ameeshkatariya: Uh, so it's been great for me, but yeah, I started in third year of college. I graduated last year. Okay.

0:39:14 ameeshkatariya: I've been in the markets for more than that because I'm my grandmother, she was in the markets for nearly 40 years.

0:39:20 ameeshkatariya: Her parents are also in the market. My, my parents are also in the market. So we've had a very long stock markets.

0:39:27 ameeshkatariya: I've always had exposure. So I'm always looking at the market. It's my daily activities, morning, evening, night. In the evenings, I look at

the U.S.

0:39:33 ameeshkatariya: one. In the mornings, I look at the Indian one. So I've always, I always liked the markets to be honest.

0:39:39 ameeshkatariya: I, uh, the only thing that made it cooler because I was always exposed was that when everyone entered, when the March COVID phase was over, they only saw the bull run and now they're only seeing the bear run or the consolidation phase.

0:39:57 ameeshkatariya: So everyone's exiting the market. But for me, I started so much before that, that I've always seen a consolidated market and only just one bull phase.

0:40:02 ameeshkatariya: So it was a very equated, uh, environment. Introduction to the market. So, yeah, because we, um, so you, so what do you do?

0:40:09 ameeshkatariya: I, um, I have no,

0:40:11 sudhir: no, no kidney, kidney specialist.

0:40:14 ameeshkatariya: Oh, wow. Okay. Doctor. Are you also in the US?

0:40:18 sudhir: I was in the US. Yes.

0:40:19 ameeshkatariya: Oh, wow. Medical care in the US is very expensive, right?

0:40:25 sudhir: Medical, again, anything that humans touch is expensive again, you know, to be frank. So we're doing some renovation in the home and, you know, the labor, okay, that you're doing.

0:40:36 sudhir: All have to pay the markup, all the kind of, I was looking at again, that they make much more money than doctors.

0:40:42 ameeshkatariya: Oh, dad, the contractors.

0:40:45 sudhir: The contractors. Exactly. Because they're only a few people who can do it. They're extremely busy again, particularly, ah, you know, ah, the trend here in the U.S.

0:40:54 sudhir: has been a lot of people have left these trades. Again, you know, the physical, you know, labor, laborious trades, and a lot of people went to doing college 20 years ago.

0:41:05 sudhir: So there is quite a bit of shortage in like, you know, the plumbers, electricians. Plumbing is

0:41:10 ameeshkatariya: one of the most expensive things you can get done in your house, right? I think it is that.

0:41:14 sudhir: Yeah, plumbing. Everything is expensive, to be frank. Not just plumbing.

0:41:20 ameeshkatariya: Damn.

0:41:22 sudhir: So, so particularly, again, you know, that's kind of, ah, yeah. AI immune as well, all this activity. Yeah.

0:41:29 ameeshkatariya: I didn't have 15, 20 years for AI to replace that, I feel. Cool.

0:41:36 sudhir: All right, Ravi, you back?

0:41:38 Ravi: Back with the bag. So now, I understand, can you show the strategy to Sudeep? So,

0:41:45 sudhir: to be frank, I'm very excited, again, you know, hearing, Ravi, that the Keger has gone above 20 percent, again, you know, na, na, na, na, na, now I'm awake, again,

0:41:57 Ravi: Sudeep, the ... na, na, na, look at the logic, the way he presented in the Excel sheet, if If you look, look at the trade and look at those.

0:42:09 Ravi: He's

0:42:10 sudhir: also making a change because the screen is very small, I don't know, can you send us

0:42:14 ameeshkatariya: the What I'll do is, I'll just share it with you guys in, in, in

0:42:18 sudhir: one

0:42:18 ameeshkatariya: second, one sec, ehm, even for, I'll just share it on WhatsApp.

0:42:30 sudhir: Do you have our email IDs? Probably that's much easier. Do you have an email ID?

0:42:32 ameeshkatariya: Oh yeah, yeah, I have an email as well. Should I share

0:42:35 sudhir: it via email? Yeah, email is better because from WhatsApp we have to push it to the email.

0:42:40 ameeshkatariya: Ah, okay. Okay, okay. Yeah, one sec. Let me just mail it to you now.

0:42:46 sudhir: So, Ravi, do you use WhatsApp on your, uh, laptop?

0:42:49 Ravi: I just, uh, just over the last one month.

0:42:55 sudhir: Since you've been talking to Amish.

0:42:57 Ravi: Yeah, probably. I don't remember. I think that might have triggered it. Oya, can you,

0:43:01 ameeshkatariya: can you send me your emails again? I think, why am I not, I did send you.

0:43:08 Ravi: Mine is Maridu, M-A-R-E-E-D-U.

0:43:13 ameeshkatariya: M-A-R-E-E-D-U, M-U dot W-I.

0:43:15 Ravi: Correct.

0:43:15 ameeshkatariya: Yeah. And Sudheer, yours is, uh,
0:43:18 sudhir: Sudheer Margav at Yahoo.
0:43:22 ameeshkatariya: V-Y-A-R-A-N-A-M?
0:43:25 sudhir: That's Gmail. That's where you can send it there too. Yeah.
0:43:27 ameeshkatariya: Ah, okay.
0:43:28 sudhir: You can send it there. That's Gmail. Yeah.
0:43:32 ameeshkatariya: I am sending the dog trade logs to three. Just send.
Should I also send it on WhatsApp? Not just as reference, I'll keep it there so that we know that the conversation keeps going on, yeah.
0:44:01 ameeshkatariya: A lot of people in the US continue using Yahoo right now.
0:44:17 ameeshkatariya: I mean, here, mostly everyone shifted to Gmail. I've seen many people from the US still clinging on to Yahoo, which is pretty cool.
0:44:26 sudhir: I think it depends on when the internet, again, when people came of age on internet. So, by the time you get to the people started, uh, using internet in India, Gmail was already out.
0:44:38 ameeshkatariya: Yeah.
0:44:39 sudhir: But yeah, all that stuff was there, again, you know, before Gmail came into existence and people like me, I was actually in India.
0:44:46 sudhir: So somehow I was reluctant to change, but, uh, I keep Yahoo for, again, you know, routine stuff. Again, it's been out there for so long.
0:44:54 sudhir: Uh, Gmail, I reserve it for only, again, you know, personal or, you know, something private again. So because I get all kinds
0:45:01 ameeshkatariya: of emails, it's Amish P Kataria and then it's Amish Kataria for my personal purposes and Amish. P Kataria everywhere. I put it literally, it's
0:45:08 sudhir: like
0:45:08 ameeshkatariya: 150,000 emails, uh, started.
0:45:13 sudhir: So I got one, exactly. I got one Gmail again, you know, that's like junk email again. You know, email ID that I do that.
0:45:22 Ravi: So Sudhir, did you open the slides? Sudhir, were you able to open?
0:45:43 ameeshkatariya: I think, Sudhir, you are on mute.
0:45:44 Ravi: And here, yeah, you are on mute.
0:45:48 sudhir: Sorry, I saw the email come along. You sent it to Gmail, right?
0:45:53 ameeshkatariya: Yes. Sorry, I look a little sleepy.
0:46:10 ameeshkatariya: I am not really, uh, used to the mornings. I usually wake up at 8 for tennis, but waking up at 6.45 has been a whole new experience for me.
0:46:20 ameeshkatariya: My parents are super happy about it, but I am still getting

used to the mornings.

0:46:26 sudhir: Can you just send it to me again? Sorry again. I thought I saw the email. I don't know where it went.

0:46:37 ameeshkatariya: Should I send it on the Yahoo one this time?

0:46:39 sudhir: No, Gmail. Send it Gmail. Gmail is much faster.

0:46:42 ameeshkatariya: Did it go into spam? One second, I'll just check. I'll send it again.

0:46:49 sudhir: Okay.

0:46:50 ameeshkatariya: Safari.

0:46:51 sudhir: Okay, I see it now. Sorry. Yeah. It was in a different folder.

0:47:00 ameeshkatariya: Then maybe the thread opens again.

0:47:02 Ravi: Alright, so let's spend five minutes on this and then move on because, uh, this one needs to be fixed, uhm, from an exit strategy.

0:47:14 Ravi: But let's explain to Sudhir. Let's go to long strategy and just check a few things on the long logs. Uhm, Amish, while you are, I'll show this to Sudhir.

0:47:23 Ravi: Do you mind just, uh, you send the logs, uh, for, uh, Step 1 and Step 2.

0:47:28 ameeshkatariya: And do you want me to send the latest one?

0:47:30 Ravi: Yes, do it. Why don't you do it? That way we can open that log and do a little log review.

0:47:36 ameeshkatariya: Got it. I'll send those

0:47:38 Ravi: as Let me review with Sudhir what we are looking at. Sudhir, did you have the Excel sheet open?

0:47:43 sudhir: Yeah.

0:47:45 Ravi: Okay, look at first trade. If you look at that, that's on Feb 28th. Okay, that's a buy, action buy. And then April 16th, next one is sell.

0:48:00 Ravi: You see that?

0:48:01 sudhir: Yeah.

0:48:02 Ravi: Okay, now go to the right side. Uh, it gives the reason why bought and why sold. The Praetorian Shard got activated because Spy was less than 200 SMA, and Vix is more than 40.

0:48:16 Ravi: The rule is it should be, Vix should be more than 30, and Spy should be less than 200, okay? So it bought at the right time, and, and, and if you go right in the, in the first row, so if you see that executed price is 24, same, because we buy next day, but the same day price when the when the rule got

0:48:35 Ravi: activated is 21.95. You see that? So the gap is 10%. If you go right,

keep going right, at the, gap, gap, gap, gap, gap, that's where I saw gap.

0:48:51 Ravi: I'm sorry, Sudhir?

0:48:53 sudhir: Oh, no, no, no.

0:48:54 ameeshkatariya: I, I, I, I sent step 1 and step 2 trade logs as well on the same thread.

0:48:57 Ravi: Okay, I'll look here.

0:48:58 ameeshkatariya: Yeah.

0:48:59 Ravi: Sudhir, if you look after executive price, close price, the next row, next column is gap percentage. You see that? Gap percentage, yeah.

0:49:08 sudhir: Yeah, 10, I think.

0:49:09 Ravi: So, basically, we paid a 10% premium but not trading on the same day because we said we should trade on the next day morning, right?

0:49:18 Ravi: So, 10%, the price increased by the time you Okay. And the second, now, go back to the same trade

0:49:27 sudhir: and, It closed on the same day. We bought it for 24 but it closed at 21.9 on the same day.

0:49:33 Ravi: On same day when we attached, when he said, when we activated the rule on the same day, it was 21.95.

0:49:39 Ravi: But it's executed next day morning at 24.15. So that overnight gap. But

0:49:45 sudhir: what is closed same day? Closed same day, is it closed lower on the same day?

0:49:52 Ravi: So, Amish, can you?

0:49:55 ameeshkatariya: Column L is the closed same day. Closed same day, same day is basically the day that the signal triggered, right?

0:50:09 ameeshkatariya: Yeah.

0:50:09 Ravi: That is A0, Sudhir. The day before, an execution happens day one morning. Yeah, exactly.

0:50:21 sudhir: I know, but I just want to clarify that it is that, or is it the closing price on the day that it's been executed?

0:50:27 ameeshkatariya: No, the, no, it is, it is, it is the closing price on the day the signal was generated, but just for our confirmation, I'll confirm again.

0:50:38 ameeshkatariya: One second. Let me just

0:50:40 sudhir: see that. That is T0 or something like that again, you know, and this is the

0:50:43 ameeshkatariya: I'll, I'll, I'll,

0:50:45 sudhir: I'll check it. Okay. We'll see you here. Okay. One net gap. Okay. That makes sense. Again, you know, 10% and then shares, shares, shares, of course, 50,000 of the portfolio went in portfolio value.

0:51:04 Ravi: I think, I think it's a, it's not, it looks like it's the same day just because overnight gap is 10.2.

0:51:10 Ravi: That makes sense with that. I subtracted and divided that gap percentage, Great job. Matches. So the

0:51:17 ameeshkatariya: gap on the, on the execution day, sorry. It's on, it's on the, on the, on the execution day.

0:51:24 sudhir: And that's why the portfolio goes on column T is lower because you lost 10%.

0:51:31 ameeshkatariya: Yes, yes.

0:51:34 sudhir: You spent 50,000, but you lost again 10%, which is 5,000. So portfolio value is 50,000 is cash and 45,000 is the value of SPXU.

0:51:45 ameeshkatariya: Correct, correct.

0:51:54 Ravi: Why would you call it a gap, boss? Anish, why would you call it gap percentage if it's the same day?

0:51:58 Ravi: You know, gap is, the rule for gap is the night before when you,

0:52:01 ameeshkatariya: Oh, So, uh, Oh, yeah, no, wait, I think there is a, there is an issue here that the overnight gap, I've taken the wrong variable then, I feel.

0:52:16 Ravi: Okay, we can set it.

0:52:20 sudhir: We need to know the, okay, close, same day close, okay, got it, same day close to see again, you know, if that triggers anything for the next day, okay, probably that would make sense.

0:52:29 Ravi: I don't know, it's the same day close we need for the triggering day, Sudhir, we need same day close, not, so, so we need.

0:52:36 Ravi: We need the triggering day closing price, and we need next day execution price.

0:52:42 sudhir: Exactly, we don't need the closing price on the day of the execution, unless it triggers the next day.

0:52:49 ameeshkatariya: Yeah, I, I, I, I,

0:52:51 Ravi: I, I, I, I, I, I, I, I,

0:52:52 ameeshkatariya: Yeah, makes sense. Understood. I'll, I'll, I'll change that. I'll send you a, a re-revision of the trade log 3, and trade 1, 2, all of them with that, because I think that error would persist everywhere, right?

0:53:04 ameeshkatariya: Because that, that variable I've used incorrectly.

Understood. I'll, I'll, I'll do that.

0:53:10 Ravi: Okay. Let's assume that, let's, you'll work on that, but Sudhir, if you look here, we bought it for 24 in row 1, and we sold it, uh, uh, 30, 45 days later at 16.

0:53:29 sudhir: Let's do the trigger Trigger was because SPXU, the 50-day SMA, so the market is up-trending, so therefore you sold it.

0:53:36 sudhir: Correct.

0:53:37 Ravi: Correct. Correct. Okay. So, let's do that

0:53:38 sudhir: exact same

0:53:40 Ravi: thing. exit is wrong. The entry was right. The exit should be cleaned up, is what we were saying, and we'll do some background research, and Anish will also tell us what will be a good exit later on, for now.

0:53:50 Ravi: Because that, that by itself lost like 33% of the, of the portfolio on that one trade kind of stuff. The rest of it, you look, Sudhir, it's all buy and sell.

0:54:03 Ravi: So every other column is buy and sell. Every other row, we bought 16.43, sold for 16.33, bought for 15.83, sold for 15.62.

0:54:12 Ravi: Bought for 14, sold for 16, things like that. So the long story short is, I told Anish that these trades should happen.

0:54:21 Ravi: We had 40 trades in those two years, ah, 20 trades each year. So I told him that the goal would be to do two trades.

0:54:28 Ravi: And I told market is down. So we can blanket, do one trade and, and blanket trades for 30 days, or do one trade and blanket trades for like 60 days, or do one trade at weeks of 30, and then once you re-bought it, you would only re-enter the market

0:54:50 sudhir: up to 20% where you don't really do much. Once you get into a trade, you sit there unless What would be a good band, again, you

0:55:17 ameeshkatariya: It needs to be specific to the market it is operating in. In a very wild swinging market, the bands, of course, increase.

0:55:26 ameeshkatariya: So we need another macro indicator in general whenever we have to, we need to have market specific bands. And to achieve market specific bands, we need to identify what kind of market it is.

0:55:39 ameeshkatariya: I've worked on a lot of indicators where we are trying to detect how the macro market looks like. It never usually works out, but we need to do that in, in, uh, on a human level.

0:55:49 ameeshkatariya: So when the markets are too, uh, volatile, we need, of course, a wider market because the, every value is swinging wide, right?

0:55:57 ameeshkatariya: But if the markets are more stable, they're consolidated, or if it's in a directional, uh, basis, then, of course, the, the, the, the bands can be can shorten down.

0:56:07 ameeshkatariya: So that's what my analysis would be. How far the bands, I think that I'd run an optimization on to understand what could be the ideal band, but 30 to 45 and 30 to 35.

0:56:21 ameeshkatariya: I think those are two bands that we could look at. So a very wide one and a narrow one.

0:56:31 sudhir: What is that? What is 30 to 35? You're talking about price or?

0:56:33 ameeshkatariya: The VIX. The VIX. VIX, right.

0:56:35 sudhir: Because all

0:56:36 ameeshkatariya: apart triggers for the SPX you're based on VIX. If you guys have any other trigger that we need to input, that we can do.

0:56:43 ameeshkatariya: Or the VIX, I think there should be two bands, 30-35, 30-45. That in a very wide swinging market, we can use 30-45.

0:56:51 ameeshkatariya: And in a narrow, consolidating or directional market, we can use 30-35. Could be, in my opinion.

0:57:01 sudhir: Yeah, that's reasonable. Yeah. So, so one thing is again, you know, as the VIX starts going up again, you know, 30-35, it'll hang there again, you know, 50.

0:57:11 sudhir: But once it starts, the slope is rapid, 50-80. Again, you know, once it starts 60-70-80, but then the collapse is much more rapid too.

0:57:19 sudhir: But then it will stay into plateau again, you know, the slope starts to decline. So how about VIX? VIX-VVIX ratio.

0:57:29 sudhir: You know what I'm talking about?

0:57:31 ameeshkatariya: Yeah, that also, that also is a good one.

0:57:35 sudhir: So probably, that's probably for, you know, later again, you know, first we need to tweak the basic algorithm. That we have the entry and exit criteria.

0:57:44 ameeshkatariya: As I was telling Ravi also, I've almost combined all of it together, right? The entire, all the steps, which is UPRO, TQQ, SPVX and SVIX, all of it together.

0:57:56 ameeshkatariya: And then I think as far as I have seen in the testing, I can see the trading log. So it looks good, uh, all combined.

0:58:04 ameeshkatariya: So what I'll do is I'll combine all of it. I'll clean it up. I'll also, one more thing can you do?

0:58:10 ameeshkatariya: The two changes that you said, right? The VIX bang. And as well as the, the, the, the other one, the close issue.

0:58:18 ameeshkatariya: Can you put it on the group as a message? So it stays as a conversation. I don't want to miss out.

0:58:23 ameeshkatariya: The last time I looped through the Loom video so that I don't miss out anything. If you can put it as a message, so then I'll know that these are the changes you're requesting.

0:58:30 ameeshkatariya: And I actually implemented it. So I don't miss out. I don't keep overthinking that.

0:58:34 sudhir: Zoom chat or WhatsApp?

0:58:37 ameeshkatariya: On WhatsApp. What's up, Rami? Probably you had to do that.

0:58:39 sudhir: I'm sorry,

0:58:46 Ravi: What's

0:58:46 ameeshkatariya: up in this, the changes that you requested, right?

0:58:50 sudhir: The closing, uh, and you can

0:58:52 ameeshkatariya: put that there. Yeah.

0:58:56 Ravi: I'm sorry. Well, what, what I'm, I'm, I'm writing bands. 30, 35 versus 30, 45 Wix bands is one thing.

0:59:09 Ravi: What else did we ask, Sudhir? VWIX, you wanted VWIX?

0:59:13 sudhir: No, the closing price, closing price.

0:59:18 Ravi: Closing price, uh, confirmation, recheck. Recheck. Anything else? Bands, 30, 35, 30 to 45 Wix.

0:59:34 Ravi: Closing price, recheck.

0:59:35 sudhir: I think you will have to see again, you know, so I think usually, I don't know, can you see the historical data of Wix?

0:59:43 sudhir: Okay, so let's say, what percentage of time does Wix spend in between, you know, what is the duration? More like, more likely than not, Wix will spend time, you know, 30-40% is more common than 40-50% and beyond that, 50-60% So, I think...

0:59:59 ameeshkatariya: More extreme than that is the rate of the

1:00:01 sudhir: recurrence, yeah. The rate of the recurrence, so you probably, again, you know, I don't know if there is a variable, again, you know, we're all, you know, biology graduates, we don't have much of calculus experience, okay.

1:00:11 sudhir: So, so you have to look at that, again, you'll see what band makes sense based on how frequently, you know, Wix spends time in that particular...

1:00:22 ameeshkatariya: Especially in the asset that you are trading. So we need to, we need to break and, and identify correctly. This was based on my general experience, but yeah, makes sense.

1:00:32 ameeshkatariya: I'll do that. The only thing here is that one thing that will stand out, right? Why the 30% down in the first day is because of the COVID thing.

1:00:42 sudhir: We had

1:00:42 ameeshkatariya: a very massive gap because of the COVID announcement in 2020. In 2022 again, or all the other 2020 trades, we had a very little loss in every trade.

1:00:54 ameeshkatariya: But in that one, it was very massive because it started out at the worst time possible and ended also at the worst time possible.

1:01:02 ameeshkatariya: It was the entry and exit. Both were pretty bad, but yeah. But yeah, I look at it from a stats perspective.

1:01:13 ameeshkatariya: I look at what VIX values work and maybe what I'll do is in the five year time frame that we have, I'll see the VIX movement and all of them.

1:01:25 ameeshkatariya: Maybe I can add that as a measure. The percentage change, and then I can figure out from there what VIX values work better for the entries and exits, but I'll do that.

1:01:36 ameeshkatariya: Okay.

1:01:41 sudhir: So one question. Uh, how confident are you about the fidelity of data bento data?

1:01:48 ameeshkatariya: The data bento data is pretty correct. Yeah, I don't think there's an issue there, but we need to expand. One more thing is one issue that one request that you raised was 2011.

1:01:58 ameeshkatariya: The data bento data from 2011. That is one thing that's pending. We're still scouting for the best data possible. Data bento was not a good source for that.

1:02:07 ameeshkatariya: Once I have that, then I think I can show you from 2011. All the backtests I'll do again from 2011, but the data bento data is pretty correct.

1:02:15 ameeshkatariya: I think I've verified it a few times with TradingView and it seemed correct.

1:02:20 sudhir: Okay.

1:02:21 ameeshkatariya: Yeah.

1:02:23 Ravi: Grossly, Sudhir, we can look at some of the trade logs here, uh, in the CD step two data bento trade log that is sent.

1:02:31 Ravi: You can look at the date of the UPRO and just look at the, uh, our other, other analysis. Just specific, randomly we pick ten dates and look at the numbers on that day and they should match, right?

1:02:43 Ravi: Seems like, they, seems like it's reasonable.

1:02:47 sudhir: So are you looking at, uh, the SPXU trade or no?

1:02:53 Ravi: Look at, no, no, no. He sent new emails. I'm now, now let's go back to, we're done with SPXU. Yes.

1:02:58 Ravi: Let's go back to the long trade. Uh, he sent new emails. Go to step two data. Uh, Anish, step two is a 60 day, right?

1:03:06 Ravi: The moratorium, 60 day moratorium for, uh.

1:03:10 sudhir: So can you explain what is a 60 day?

1:03:15 ameeshkatariya: I'll explain in a quick way. So basically when we are, uh, going up, right? When we said that if it is, if it does a reversal, if it's going up, progressing very fast, then we'll buy a hundred percent and we won't trim down to 50%.

1:03:29 ameeshkatariya: This is those conditions that we set. The defensive trim, we won't exit when we are buying from when we are going from cash to a hundred percent.

1:03:38 ameeshkatariya: Now, what I felt here was that then it would be an indefinite pause on defensive trim. If we are going to a hundred percent, then we'll never trim down, but that shouldn't be the case.

1:03:49 ameeshkatariya: We should always have a cap on everything in a trim trading strategy. So what I did was I implemented a counter that when we are going from zero to a hundred percent, the defensive trim would be delayed by a particular amount of days.

1:04:03 ameeshkatariya: Before it was two days when I showed you back then, and now I've implemented change it to 60 days. So that delay, it will be now be delayed by 60 days.

1:04:12 ameeshkatariya: And then I shared the results again on the WhatsApp group. So that counter is now adjustable.

1:04:18 sudhir: So as the market is going up, okay, even if it flashes, okay, you'll still sit there with that position for 60 days.

1:04:23 sudhir: Yeah.

1:04:25 ameeshkatariya: Correct. And I won't defensive. Why didn't you

1:04:28 sudhir: choose 60 days? Why not 30 days? I don't know. I

1:04:31 Ravi: just randomly said that.

1:04:33 ameeshkatariya: I just
1:04:33 Ravi: randomly said 60 days. Yeah. 60 days.
1:04:36 ameeshkatariya: Yeah.
1:04:38 Ravi: Usually recovery. Recovery takes, uh, for the SMA 50 to catch up to SMA 200 in my just gut, uh, review historically over the last few months, it seems like it'll take like around 20 to 45 days to do that.
1:04:52 Ravi: To, for SMA 50 to catch that
1:04:55 sudhir: he's got. Exactly. That's where you see most of the whiplash. Again, it goes up and down again, you know.
1:05:00 Ravi: So that's why I just ignored 60 days and just stay, trust the market because it'll cross 200, just stay in it.
1:05:08 sudhir: Right.
1:05:12 Ravi: I'm just auditing. I'm just looking deeply at all the logs. Look at 2021 logs, 2020 and 2021 logs Sudhir. Just to look at the logic of why it's selling and buying and get an understanding and make sure I'm ignoring TQQ just because it's too much of brain, uh, confusion for me.
1:05:29 Ravi: So I'm just looking at you pro buy and sell that it's doing. And I'm looking at the logic because the logic is also given to see if it makes sense the way it's trading.
1:05:38 sudhir: Do you have just taken, you know, have you looked at without combining with TQQ? Just you pro because that was our initial thought.
1:05:46 sudhir: Is that step one?
1:05:47 ameeshkatariya: Yeah, that's step one. That also has a second.
1:05:51 sudhir: Probably, probably that will be.
1:05:54 Ravi: Okay. I was looking at step two. So that's also 60 days boss.
1:05:58 ameeshkatariya: Yes, yes, yes, yes. Step one is also 60 days.
1:06:00 Ravi: That you sent now? Both are
1:06:03 ameeshkatariya: updated to 60 days.
1:06:05 sudhir: So let's look at step one, which is pure, pure you pro. Okay. So that again, it's comparing.
1:06:12 Ravi: Just keep looking at that. So let's just spend, because this is a good time. All of us. Who's on the call?
1:06:17 Ravi: Just independently. Let's look and get a sense if you understand or not. I'm trying to understand, so I'll talk less.
1:06:24 Ravi: You also see if you can understand, and then we can ask Anish sell bull. Cash.

1:07:36 sudhir: Question, here also it says same day close, so what is that?

1:07:49 sudhir: Is it the day of the execution or the trigger date?

1:07:52 ameeshkatariya: Yeah, yeah, even, even, even that will have the same issue here, so that, that's error, so it's one common engine, right?

1:07:58 ameeshkatariya: So I'll fix all of those together.

1:08:01 sudhir: So I don't know, Ravi, so can you follow this again, you know, with that information?

1:08:08 Ravi: Sure, Ravi, you're asking me something?

1:08:13 sudhir: Right, okay, so, so Amish, question, so, so is it, so if it's the same declosing, then how is it triggering again, you know, so are these all accurate?

1:08:24 ameeshkatariya: Oh, yeah, yeah, all are these are accurate, the wrong data point is printed on the Excel trade log. That's the only thing.

1:08:30 sudhir: You just have

1:08:31 ameeshkatariya: to ignore column error.

1:08:33 sudhir: Yeah, yeah, I'll, I'll

1:08:34 ameeshkatariya: change that if I just do it now. It's a pretty quick change. So I'll add the close of the trigger day, right?

1:09:13 Ravi: Okay, uh, so, so just to make it easier, that empty columns dead space is there and I just deleted those columns to make everything easier for you.

1:09:29 Ravi: Just delete those, those five, six empty columns to look. So I'm looking here October 15th. I think the rules are, the data is following the rules well it looks like.

1:09:41 Ravi: At least I'm not, I'm talking about fidelity of the rules. Algorithm seems to be working. Okay, Sudhir, based on my review, ah, for example, October 16th, first row, October 16th, it went from cash to bull because VIX was less than 30 and SPY was more than 200, SMA was more than 200, so it bought, ah

1:10:04 Ravi: , it bought UPRO, ah, at around \$31, ah, it bought, and then it went to cash state because VIX was 32 on, ah, around \$30.

1:10:17 Ravi: Around 10 days later, and it sold it for a loss of \$2, \$28 it sold, then it went to bull again, ah, November 5th, are you following Sudhir?

1:10:33 Ravi: Hello? Yeah, If it's not helpful, I won't say it. So, if you, if it's, if I need to stop, let me know.

1:10:40 Ravi: November 5th, the third row, it went from cash to bull state, because VIX was 29.6, which is less than 30, and it bought it for a little over \$30.

1:10:51 Ravi: So, at this point, the trades are not too whiplashy, little whiplashing, but not too whiplashy. And then, January 27th, it went from bull to cash again,

because VIX again breached 30 at 36.

1:11:05 Ravi: And it sold, it sold it very high at 37, so we made a decent chunk of money, and it went from cash to bull again on, in February, uh, because VIX breached less than 30 and SPY was more than 200.

1:11:21 Ravi: And it bought it at \$40, and then, and then the next trade was, uh, all the way till November it stayed in the market.

1:11:33 Ravi: And in November, it, uh, it, uh, did RSI trim. At \$75, \$73 it trimmed, and then it bought, because RSI recovery rules kicked in when RSI was less than \$60, so it sold at \$73 and bought it at \$70, uh, in, in, uh, around Thanksgiving, November, and then December, November 1st, it killed it again, went

1:11:56 Ravi: all cash, because pi was \$31, at \$66, and then it bought, went into bull mode, uhm, uh, shortly, in, short, next day, actually, and then, at \$67, so, and then, from bull to cash, it went again, for three days, so this is replenishing around the same value, and, so the, the trades are, you know, not terrible

1:12:25 Ravi: , 2021 trades, there were only few, class, around 10-15 trades only, in 2022, there were only 10 or 15 trades, and, uhm, the fidelity of the rule following, uh, the conceptually, it looks okay, long, long trades look okay to me, so there.

1:12:42 Ravi: I don't know what you

1:12:43 ameeshkatariya: feel, and I also sent the updated one, with the close corrected on trigger day, I just sent it via mail, I think if you can check

1:12:50 Ravi: that, okay, we'll check that in a minute, so that to me, the smell test looks okay to me, on this one, the basic gut check and smell test.

1:12:58 Ravi: It smells okay, kind of stuff, I mean, the rule fidelity is, the rule architectural stuff that is written is falling it well, so 2022 was a bad year obviously, hey, Anish, so to this row, I need, I need, like, like we asked in WhatsApp, I'll put it, annual rows, annual returns.

1:13:30 ameeshkatariya: I, I, I, I have that. I, I'll show it to you. Annual returns, right?

1:13:42 Ravi: Yeah, I wrote annual returns compared to your pro buy and hold annual returns.

1:13:48 ameeshkatariya: Yeah, yeah, no, I, I, I have it, you know, step one data bento metrics here. So let me send it on WhatsApp.

1:14:00 ameeshkatariya: This is all. This is step one. Then I'll give you step. Two. Did you get it?

1:14:24 ameeshkatariya: Okay.

1:14:29 Ravi: What is, ah, so.

1:14:32 ameeshkatariya: This is, the first one is step one. Okay. And the second one is step.

1:14:40 Ravi: I don't understand. The last email. No, you, you sent something last. The last latest email I got was like two minutes ago.

1:14:49 Ravi: Yeah.

1:14:50 ameeshkatariya: So that is that is just the close column, uh, corrected. Signal day close. And, uh, this one that I've sent on WhatsApp is the annual returns for both of the steps.

1:15:00 ameeshkatariya: Oh, what's that?

1:15:02 Ravi: Oh, yeah. Are you in that WhatsApp group, Sudhir?

1:15:09 sudhir: Yeah, the phone is someplace else. I mean, it's, it's, I don't have it on my laptop, so.

1:15:13 Ravi: I understand. I understand. Uh, hey, uh, when you're sending it, can you, can you make sure you label them?

1:15:20 sudhir: Yeah, exactly. Because

1:15:21 Ravi: all of them are step one and step two. So it gets confusing, which is which. Just label them, uh, so that they

1:15:27 ameeshkatariya: What I'll do is I'll send the whole file to you. And in that, the label is written that it's step two, you pro plus three triple Q.

1:15:34 ameeshkatariya: This one's step one, which is you pro only. I'll send, I'll send the whole matrix JSON to you.

1:15:39 Ravi: Label them so that we can look, we can look at the name and figure out what we're looking at and then this annual returns.

1:15:44 Ravi: Also, this is good, but we need a little bit better just compared to, we need compression columns for you, pro and spy.

1:15:53 Ravi: You

1:15:53 ameeshkatariya: send that over. I'll send the next year.

1:15:57 Ravi: I'm looking here, annual returns, uh, you sent step one and step. You got it. Step one, 18% is a 2020, but that's from October of 2020.

1:16:09 Ravi: I think it's not the whole year.

1:16:11 ameeshkatariya: No, no, no, let me see. Oh no, it's from October.

1:16:14 Ravi: Well,

1:16:16 ameeshkatariya: I'll do it again with the January thing. Yeah. If you

1:16:20 Ravi: don't mind. 2021 is 74% 2022 minus 42. How much pi did it go down in 2022? Do you remember? Was it, ah, 20s, right?

1:16:34 Ravi: Mid-20s, right? Let me look. You're

1:16:39 ameeshkatariya: on mute.

1:16:41 Ravi: Bye.

1:16:43 sudhir: Spy, yeah, somewhere around, like, 17%? Something like that?

1:16:53 Ravi: Yes, minus 18%. So, just for comparison, in 2020, spy was 18% positive. In 2021, 28% positive. I think this, uh, longer strategy that Anish is sharing looks like, uh, it, uh, we are 74 in 2021.

1:17:12 sudhir: Are you looking at year to, uh, yearly returns?

1:17:15 Ravi: Yeah, with

1:17:17 sudhir: dividends reinvested. Can you share that file and ask them to wait?

1:17:24 Ravi: Uh, you want an email, right? You're saying send me an email? Hmm? Uh, what? The spy one or what Anish sent kind of stuff?

1:17:35 sudhir: What Anish sent? The yearly return.

1:17:37 ameeshkatariya: Okay. Yeah, I can, I can, I can send it. Once, what I'll do is I'll run it again from the 1st of Jan 2020 and then I'll regenerate.

1:17:46 ameeshkatariya: I'll send everything together. Maybe I can, trade logs I'll send separately and step 1, step 2, comparative table I'll give you in one simple doc so you can do the comparative analysis as well.

1:18:02 Ravi: Okay. One second. Sudeep, I'm going to send it in Gmail just so that you're looking at the same members I'm looking at.

1:18:09 Ravi: Okay. You're getting it just so that we can continue this conversation now. Annual Spy and this is, ah, annual, uhm, you pro long only.

1:18:23 Ravi: Uh, and then, uh, you pro plus TQQQ long only. So adding TQQ didn't help, huh, Anish?

1:18:43 Ravi: Oh, no, I think it did

1:18:45 ameeshkatariya: a little, right? Well, one second, let me check. That's

1:18:50 Ravi: okay, that's okay. Yeah.

1:18:52 ameeshkatariya: His total return was 193, and, oh yeah, it did not. It went down 188. It went down 5% to 188.

1:19:04 Ravi: Sudeer, I sent you an email. Did you get it? Oh,

1:19:13 Sudhir: it's okay.

1:19:16 ameeshkatariya: I

1:19:16 Ravi: have

1:19:16 ameeshkatariya: a feeling that we have slightly order and more realistic results if we start from scratch. Let's 2011, because 2020 to 2025, the majority section there till 23 has been a bull face.

1:19:35 ameeshkatariya: So a bull strategy would of course do well. And then,

there have been stride bull phases in 24 as well.

1:19:44 ameeshkatariya: If you do from 2011 to 2025, that will almost be the entire long-term death cycle. In fact, one and a half of it.

1:19:52 ameeshkatariya: The long-term death cycle is around 11 or 12 years in the short term. Some one is four years. So, a 12-year phase would cover every phase there is of the market.

1:20:02 ameeshkatariya: The entire inflation, the recessions, the stagnant phases. So, I think in 2011, we'll get a much better idea as to which one's better.

1:20:11 ameeshkatariya: And then we can do a comparison. Between, in a more or less bullish phase, these steps were doing better. And in an overall equated market phase, what was doing better?

1:20:22 ameeshkatariya: Okay.

1:20:25 Ravi: So, did you get my email? So just looking at it, because we have only five year data now looking from 2021 to now, I think in the bull market, the information is the long straddles behaving well, at least, you know, you know, because, uh, Anish, the concern is, uh, that if you're not, even if it is not

1:20:54 Ravi: performing well in bull market, then there's no point in pursuing this at all.

1:20:58 ameeshkatariya: Correct. Correct. In the bull market performing well.

1:21:02 Ravi: Because, because in 2021, we are getting 74% return, 2023, 27% return, which is matching SPY. In 2024, we're getting 64% return.

1:21:15 Ravi: And in 2024, we're going to be So, that's why, that's, that's what I see here.

1:21:38 Sudhir: So, one caveat to your strategy here is, again, you're combining Upro and TQQ. Again, your TQQ was, ah, uhm, or, you know, ripped all the way from, like, 2020 to 2025 except for 2022.

1:21:52 Sudhir: So, if you want to look at the SPY only versus, again, you know, we'll have to, we'll look at just Upro only results.

1:22:05 Sudhir: Upro only with our strategy.

1:22:10 ameeshkatariya: Upro only would be step one, right?

1:22:14 Sudhir: Yeah, but, uh, in the email that Ravi sent, yeah, I'm not seeing the Upro only. Is it Upro long only?

1:22:22 Sudhir: Is it like, you know, that's buy and hold? No,

1:22:24 Ravi: sent, email I sent you, you mean, Sudhir? Yeah,

1:22:27 Sudhir: yeah, yeah. No,

1:22:28 Ravi: no, no, there are three headings, remember? Annual SPY, annual

Upro long only, Upro plus TQQ long only. Got it,
1:22:35 Sudhir: so Upro only is like, it is. It's just Upro. Upro only is
1:22:39 Ravi: step one. That is step one. And Upro plus TQQ. I didn't label step one, Anish, when I sent him, I labeled it as Upro long only.
1:22:49 Ravi: And then, Sudhir, Upro plus TQQ I wrote, right? Long only?
1:22:52 Sudhir: Yeah. Okay.
1:22:55 Ravi: Okay. So, ultimately, end result, Anish, we need long from 2011. Long. We need long only? From 2011.
1:23:10 Ravi: And then we need long plus short one plus short two. Okay? From, from whatever time frame you can get us.
1:23:24 Ravi: Okay. Yeah.
1:23:31 ameeshkatariya: I look at some time frame I can extract for good quality data. And then I'll get that to you. Maybe I'll download the polygon.
1:23:38 ameeshkatariya: And then I
1:23:39 Ravi: can, and then the next one. One is long plus short two, because short one is not clean. Looks like long plus short two only.
1:23:52 ameeshkatariya: Long plus
1:23:53 Ravi: short two. You know, short two, short two is a six. Yes, short one. We are, we are like, you know, it's just not, we need to clean up and we are not there yet.
1:24:05 Ravi: You know, we're,
1:24:06 ameeshkatariya: I mean,
1:24:06 Ravi: remember, we are, we not there. The, the regimes, we are not able to clean up the exit. Yet. Well, the entries were good.
1:24:16 Ravi: Exit needs to be cleaned up yet. So you were going to look into that. I was also going to look into that and to reduce the trades, we were going to do that badge and all this stuff,
1:24:24 ameeshkatariya: but
1:24:25 Ravi: yeah, that's the data we want. So I actually am pleased. With the fidelity of data, I think it's reproducible. This data that you gave me, at least to me, it's reproducible.
1:24:36 Ravi: So that is, I'm happy with that. If I'm not looking at the results, I just want data fidelity to me.
1:24:41 Ravi: It looks good. So can you, for me, Anish, for me and for Sudhir when you're working on it, it's not that 20%, 18%, 22%.
1:24:51 Ravi: The data should be clean once we've done 100 times, we get exact

20%. We shouldn't be getting 10% one time and 30% next time, because we don't know what to do with that data.

1:25:01 ameeshkatariya: You know, I think because if the data is incorrect, we might be trading on false pretense. And that means that, uh, although it looks good on paper, most of the paper in the house will go away if I keep doing this.

1:25:18 Ravi: So that is one thing. And the second thing is your architecture rules appear to be good to me. I'm very happy with that because the rules, if they're not good, then we are just scrambling in the floating in the air as to white soul and white board.

1:25:32 Ravi: To me, they look okay, Sudhir. Just to spend 10 minutes and look at the rules, the, uh, the, how it's buying and selling, you can always change those things, the algorithm machine should do what we want it to do.

1:25:44 Ravi: So it seems like

1:25:45 Sudhir: to me, if you believe the results, I'm just looking at the yearly, uh, you know, uptakes. 2022, again, you know, the max drawdown was like, you know, purely if you're looking at Eupro, it was, uh, 42.6.

1:25:58 Sudhir: That's quite a bit though, again, you know, for a strategy. I think our idea is to come out early. Again, you know, we are open to, we okay with capping the upside a little bit, but we want a downside production because we feel our strength is when, you know, it's the fan.

1:26:14 Sudhir: You know, VIX 50 plus is, we consider our strength, right? So, but, uh, 42, again, you know, it's the drawdown again, when we are redoing the strategy, a little bit later tweaking, uh, the drawdown seems quite a bit though in 2022, still 42%.

1:26:33 ameeshkatariya: I think

1:26:33 Ravi: capping

1:26:34 ameeshkatariya: profit and loss is always a very good idea, uh, as a, as a trader also, it sets up the rule that everything is contained, right?

1:26:45 ameeshkatariya: And, uh, both the greed and the fear is always on a cutoff. That it's not that it'll always go overboard.

1:26:52 ameeshkatariya: So I think a profit cap would be great.

1:26:58 Ravi: For reference, it was 56 for you, bro. 42 is high. I wish it was in mid thirties. So we could take a look at the, we could, we could

1:27:10 Sudhir: I'll call it a later point. This is just one comment, but as you mentioned, the first thing is to make sure that again, you know, whatever is the data accurate.

1:27:18 Sudhir: Okay. And is the engine following the algorithm accurately? So that those are two things that we need to, I think we are still.

1:27:26 Sudhir: We're still confirming it. I think we have moved in the right direction. We're almost there, but I think we need the data for the earlier years.

1:27:35 Sudhir: Yeah.

1:27:35 ameeshkatariya: I understood. Yes. I will. I

1:27:40 Ravi: will. 22. Right. So this is. 22. Right. So that one. 22.

1:27:45 Sudhir: Yeah. 22.

1:27:47 Ravi: So 22 bull, uh, cash. So there are only 10 trades in 2022. I'm looking here. January 21st, it's sold. January 31st, it's bought back, uh, because, uh, uhm, it killed it because pi was less than 200 and reentered when it's better.

1:28:11 Ravi: And then it killed it, uh, because, uhm. As SMA was again lower than 200, then it went full bull on more two days later because it was better.

1:28:22 Ravi: So I think a lot of flash because of that, uh, that, uh, trade, but that was just before the. 2022.

1:28:31 Ravi: Oh, that was inflation year. I'm sorry. 22 was inflation year. It was pretty bad till end of the year. It did one, two.

1:28:39 Sudhir: Most of the time, again, probably that had the least rates. I'd imagine again, because that was the trend that we had noted earlier.

1:28:46 Sudhir: Most of the time, it spent time.

1:28:48 Ravi: 14 trades. Yes. Yes. It made 14 trades. You're right, Sudhir. It makes, uhm, 14 trades. Unfortunately, the

1:28:55 Sudhir: damage problem was already done earlier in the year.

1:29:00 Ravi: Uhm. Do you have, hey, Anish, because you have the data, could you do a 2022 quick, uh, pull-up of 2022 long, you pro step one only, uh, and tell us what percentage of the year did it remain in cash, what percentage did it remain in what?

1:29:19 Ravi: What state? Could you do that quickly?

1:29:21 ameeshkatariya: Uh, you, you, you want me to look at the trade log and give you the percentages of?

1:29:27 Ravi: Trade log, uh, you, you're, can you run, uh, you're organized, uh, because you're able to, can you run, uh, 2022?

1:29:35 Ravi: Review quickly and say, in the, in the year, 20% of the times it will in cash mode or 60% of the time.

1:29:43 Ravi: Okay.

1:29:43 ameeshkatariya: So overall I have numbers, state distribution across the

whole time frame. You want

1:29:49 Ravi: it on

1:29:50 ameeshkatariya: real basis. Will it

1:29:51 Ravi: take long to just do 2022? Will it take long to just do 2022? Or you can do it in two minutes?

1:29:56 ameeshkatariya: Uh, okay. I'll, I will, I'll change it. Yeah, yeah. Works

1:30:00 Ravi: out. 2022, just so that, because we are talking about it.

1:30:04 ameeshkatariya: This this will be YouPro only, right?

1:30:07 Ravi: Yeah, step one. With that 60 day rule.

1:30:23 ameeshkatariya: One sec. Okay, change the date.

1:30:39 ameeshkatariya: Okay, it's running it now. Sudeer, the buy sell

1:31:23 Ravi: for, uh, for Jira. Upro that year. Consistently every trade, we bought

1:31:43 Sudhir: 2018 was the Fed year, right?

1:31:46 Ravi: That, uh, 2018 end.

1:31:49 Sudhir: Yep. 2018 was a negative year too, right? So whenever, again, the keys, whenever Fed is the, Fed plays a role again, you know, if it's a Fed related recession, you're screwed.

1:32:01 Sudhir: Two years too, kind of watch out.

1:32:06 Ravi: Is it consistent, every trade we, we bought and sold for like two, three dollars less, every trade throughout the year?

1:32:14 ameeshkatariya: Yeah, so I, I, I have the results from start date 1st of Jan to end date 30th of, 4th of Jan to end date 30th of December.

1:32:26 ameeshkatariya: Uh, we had a total, uh, max drawdown. We stayed 84.8% of the year.

1:32:38 ameeshkatariya: We stayed in cash and the rest of the 15% in bull. And the annual return was minus 42%.

1:32:48 Ravi: Okay, that makes sense. So, the logs I'm looking at, ah, I looked at all the logs, every trade. Every trade we lost 2 to 3 dollars.

1:32:56 Ravi: They were like 8 buys and 8 sells, I think. And every trade we lost and it's, ah, all the buy signal was because, ah, it, it breached 200 days and me kind of stuff.

1:33:07 Ravi: And then, and then the VIX would come in or something and it would sell it and buy it. So, it was a pathetic year for that reason.

1:33:13 Ravi: It would be nice if, ah, if we can clean it up further. But for now, for now, we understand. Instead of 56% drawdown, it was 5%.

1:33:20 Ravi: 46% drawdown. So, survived to, survived 12-13% a little bit, come by

that. So, if you are able to cut it down to 30%, it would be better, but I don't know how to do that.

1:33:32 Ravi: We'll talk about it later.

1:33:36 ameeshkatariya: Strategy performs too well, right? Like if it is, then it's also the drawdowns are usually higher. As far as I, that, yeah.

1:33:46 ameeshkatariya: If you want to get the money, you have to put in the monies kind of thing. The market's

1:33:50 Ravi: pretty brutal. And then, what is that? The Pi times two is what? SSO? What is that called? SSO, right? Yeah.

1:34:02 Sudhir: Yeah. SSO. Last

1:34:04 Ravi: tenure, one second. I'm just looking what's going what SSO did. Uhm, 42% boss in 2022.

1:34:15 Ravi: Minus 42%. How much was the art strategy down? Minus 42 points. Or some similar, minus 42.

1:34:19 ameeshkatariya: Okay. It was

1:34:20 Ravi: 42. 42. So this, no, no, this is, uh, let me look at the email that I sent the slides.

1:34:34 ameeshkatariya: Ours was also down 42.6, 42.5. 42.6. Yeah.

1:34:40 Ravi: It's performing like 2x today. Remember we were talking about it. Yeah.

1:34:51 Ravi: Because the returns I think if we compare, the returns might match that. We should, we should compare this Kager, last 5 years Kager to SSO.

1:35:02 Ravi: Okay, Amish, I am good. If you can look into those things.

1:35:07 ameeshkatariya: Yeah, I'll look into the changes that you've said as soon as I've done them. I'll transfer that, I'll inform you.

1:35:13 ameeshkatariya: I'll inform you on WhatsApp and maybe a few days later we can see the entire combined thing, all steps combined, with the bull, with the short and everything.

1:35:21 ameeshkatariya: And I'll also create a segment where I ignore the step, the short one and I'll only keep the short two with the rest of the bull stuff.

1:35:29 Ravi: And, uh, and, uh, for, uh, XP,

1:35:45 Sudhir: Without the long-term 2011 data, again, you know, looking from 2022, that, uh, won't give an accurate picture. I mean, it's been a bulldozer for 2021.

1:35:55 Sudhir: Yeah, That's what we have. To be frank, again, this is, this is all, again, overly optimistic. Probably the, uh, best, uh, upward sloping period, again,

in the whole SPY, uh, era.

1:36:08 ameeshkatariya: So, yeah, I don't know. Me and Anmol have been scouting through data sources and I think we've found by evening today, we should be able to find.

1:36:20 ameeshkatariya: It takes only a minute to switch in the data and then run it again, but the data Bento has clean data, so I think maybe we'll download a flat file from Polygon.

1:36:30 ameeshkatariya: Polygon also has good data and then we'll compare. Maybe 20-30 odd days with TradingView and then we'll know that the data is correct and yeah.

1:36:38 Ravi: Uh, hey, can you also, you don't have to do it now, but can you answer this question that I'm putting here in the group?

1:36:51 Ravi: Uhm, I just googled how to create Svicks. Svicks only started in 2022, boss. So you won't be able to do too much of, uh, uhm, yeah, yeah, yeah,

1:37:03 ameeshkatariya: yeah, I was, I was googling going to mention that there's a shorter timeframe for that, but then I figured that if I'm looking at it incorrectly, so I checked again and knew that was I was just doing that while we were talking when we were doing this.

1:37:17 ameeshkatariya: So how do you want me to go about that though?

1:37:21 Ravi: So can you. Can you, while we're talking, can you just, can you just Google, uh, Svicks formula, how to create synthetic Svicks?

1:37:28 Ravi: Can you just look it up? Let's, let's see if that is doable or not. Just, just do quickly synthetic Svicks.

1:37:37 Ravi: How to create Svicks.

1:37:41 ameeshkatariya: Svicks.

1:37:41 Ravi: When I look, it looks S-V-I-C-K-S.

1:37:44 ameeshkatariya: Yeah, yeah, yeah.

1:37:46 Ravi: For back testing, need to create. How? Because it gave me a formula in Google.

1:38:01 ameeshkatariya: It is giving me a formula for VIX, but it is not giving me a formula for Svicks. Svicks, okay. Yeah, I'm checking that.

1:38:09 Ravi: Just do that, uhm, how to, uhm, I'm asking, uh, uh, Svicks, to baptise Svicks. Actually, I'm I think, uh, Okay, I, this is what, uh, Xvicks, this is what, uh, Gemini is asking you to do.

1:38:54 Ravi: I just put it on,

1:38:55 ameeshkatariya: uh, Yeah, so,

1:38:58 Ravi: Do you see the, you don't have to answer now, just read it, what I just put in there. Yeah, Uh, and see if it's, uh, doable or not.

1:39:07 Ravi: See, I just put in there, uh, that's what, uh, Gemini told us to do.

1:39:12 ameeshkatariya: Done, done, done. I will, I will look into through this.

1:39:16 Ravi: Won't be

1:39:16 ameeshkatariya: able to match it exactly because of, uh.

1:39:20 Ravi: no, but roughly, not exactly, but some sort of, you know, some sort of rough to, uh.

1:39:27 ameeshkatariya: Make sense.

1:39:28 Ravi: How to create. Syntactic, Uproot.

1:39:36 ameeshkatariya: No, so this is, this is also what I wanted to say, right? That when we look at the data, there's a lot of improvements that keep coming in.

1:39:43 ameeshkatariya: That's why most of our clients also stick with us. On a retainer for a longer time is that you keep observing data as the months pass by in real market conditions, and you keep observing a few of the other ideas or optimizing a few factors.

1:39:58 ameeshkatariya: So, you know, we could also discuss that once this is over, but that's it. That is huge because the market's always changing dynamically, right?

1:40:05 ameeshkatariya: Always, every month. So it makes sense to keep going over it again and again and again every week and reconciling.

1:40:13 ameeshkatariya: Okay.

1:40:13 Ravi: Uhm, sure, fair enough. But I think from beginning onwards, I think the main thing is thing we wanted was, uh, uh, yeah, as you go along more things, but what we have now, we just want to kind of make some stuff.

1:40:26 Ravi: So the, the, you pro is pretty straightforward formula for you pro. I just, uh, uh, I just, uh, put it there also you pro, but I think XFix, we need some sort of rough creation for you.

1:40:44 Ravi: XFix, because it's only since 2022, and then you pro for short since 2010 it's available. So you can clearly do that from then.

1:40:52 Ravi: Uh, and, uh, prior to that, we can, we can circle back as we go along, because that's kind of a, you pro is more straightforward.

1:40:59 Ravi: Synthetic, you pro is more straightforward formula. Uh, so, so XFix, you probably will have to create your something just because we can't use just three years of short data, probably need longer.

1:41:11 Ravi: So do some time, uh, look into that. And then, uh, you pro from 2011,

you and Anmol look into that and let us know.

1:41:17 ameeshkatariya: Yes. 100%. God. I

1:41:21 Ravi: think that's all. Yeah. Okay. Anything else?

1:41:29 Sudhir: Yeah.

1:41:31 Ravi: Okay.

1:41:31 ameeshkatariya: Thank you. Thank

Meeting Recording - May 15, 2026

00:00 iPhone (115): This meeting is being recorded.

00:02 Insight Fusion Analytics: Yeah, yeah, it's okay. I mean, just get your laptop started. Is Sudhir joining us?

00:08 iPhone (115): Yes, uh, he said he's gonna be 10 minutes late. He just texted me, so we can get going. Uhm, and he can just join us.

00:16 Insight Fusion Analytics: Okay, okay.

01:35 iPhone (115): Thank you.

01:47 Ameesh Katariya: Hello, yes, so it's almost started, so I'll start going over the main topic of today's discussion.

02:04 Ameesh Katariya: So I think what we've had so far, right, is that every time, am I, I'm, I'm audible, right?

02:11 iPhone (115): Yes.

02:12 Ameesh Katariya: Okay, so what we've had right now, right, that there were some parameters that you wanted us to change during the backtest, and then sometimes it took some time for that process.

02:21 Ameesh Katariya: And now what we've done is, we've created a small dashboard. Now we're still working on it, but this is the first POC that we'd like you to see.

02:31 Ameesh Katariya: I'll just start sharing my screen in a minute. And what we've done is, we've, uh, put the entire backtest, right, backtest on a server, right, on our server.

02:39 Ameesh Katariya: And now you can go ahead and change any of the parameters and actually see the, uh, the backtest done differently as soon as you click on the run back test button.

02:52 Ameesh Katariya: So let me give you a small sample.

03:09 ameeshkatariya: Yeah, awesome. My laptop now is much better.

03:25 ameeshkatariya: Can you see my screen? Is my screen visible?

03:39 iPhone (115): Yes.

03:40 ameeshkatariya: Okay. Okay. Okay. So, uh, this is basically the whole backtesting framework. Let's see if I go to uProwrite and I run that backtest and if for example I.

03:56 ameeshkatariya: I change the RSI rebuy to 65.

04:03 iPhone (115): Can you give me one second because, um, I think I'm seeing on my phone, it'll take me like five seconds to, or 20 seconds to log in on my laptop.

04:10 iPhone (115): Yeah, yeah, yeah. No worries.

04:11 ameeshkatariya: I'll wait. Yeah.

04:13 iPhone (115): Like, like just a second.

04:15 ameeshkatariya: Yes, yes, yes. No worries. We'll take your time.

04:46 RaviMareedu: You can hear me, right?

04:51 ameeshkatariya: Yes, yes, yes, yes.

04:53 RaviMareedu: Great. Let me log out of my phone and, uh, I'm on my laptop. Okay, I'm here.

05:05 ameeshkatariya: Yeah. So this entire dashboard is basically running on the backend. So every time you have, you want to change, you know, a factor, let's say you want the RSI period not be 14 and you want it to be 17.

05:20 ameeshkatariya: So you just change it here. You run the backtest and the updated results are here. It sometimes takes 200 milliseconds, sometimes two seconds, depending on the request and the calculation size.

05:30 ameeshkatariya: So it's on all. So if let's say I don't want, when I'm going from, uh, you know, the, when F50 SMA triggers defensive, right?

05:39 ameeshkatariya: And we don't want it to be done last time you highlighted an issue that is being done in two days.

05:44 ameeshkatariya: You want it to be done. Okay. Not a mission two days, but maybe in the next, after 30 days, it should actually trigger back.

05:50 ameeshkatariya: So then I can change it to 30 and the results change accordingly. So in the beginning, you know, you highlighted an request that you wanted a platform where you can play around with the parameters with the state machine and you can see how it functions.

06:08 ameeshkatariya: So this is basically the first iteration of what that is. And secondly, what we used to send you as a CSV file, you can anyway see the entire

trade list.

06:16 ameeshkatariya: You can download right here and the same trigger results eventually, if you want to download to Excel, all of those features, you know, we can add.

06:25 ameeshkatariya: So this

06:27 RaviMareedu: is what

06:29 ameeshkatariya: timeframe, sorry.

06:31 RaviMareedu: This is from what time?

06:34 ameeshkatariya: This is from, this is from, this is around a 7 year period, the entire backtest. Yeah, you can ignore this, this might be a small error, but it's a 6.87 years backtest.

06:52 ameeshkatariya: Yeah, so, yeah, sure.

06:56 RaviMareedu: Well, why don't we table this for 10 minutes later? This looks good, but, ah, I think Sudhir would like to see this too, that way you don't have to repeat twice.

07:04 RaviMareedu: So, thanks for this. I think, ah, this, ah, this has, ah, no short factors, right? This has long factors, right?

07:11 ameeshkatariya: Sorry, this has what?

07:14 RaviMareedu: Only long factors, right? No short, ah, No, it

07:16 ameeshkatariya: has all the four steps that

07:18 RaviMareedu: we had. Step

07:19 ameeshkatariya: two, and then we also have step three,

07:25 RaviMareedu: Doesn't the Upro go till 11 or something like that? Is it possible to get little bit back? I don't know.

07:34 ameeshkatariya: I think I missed you a bit there. I think I had,

07:37 RaviMareedu: Oh, I was asking, doesn't. Doesn't the Upro go till like 20, uh, 2011 or something like that?

07:43 ameeshkatariya: Oh, yeah, yeah, yeah. This is just the first POC. So it's only having seven years of data. And moving on, we'll add more, more data, everything that has, in fact, we'll also have a data on request.

07:53 ameeshkatariya: So we'll connect it to data and if you want a further back-to-back test for something, this will go further back as well for Upro.

08:02 RaviMareedu: And this is like a website or how do we access this?

08:05 ameeshkatariya: Yeah, yeah, wait, let me just give you, uh, so this is, Thank you. Let me just, yeah, oops, you can, I just send the link and.

08:27 ameeshkatariya: Yeah, and also, you, for trying it out, you will need to, uh,

there will be a space on top of the website, which you'll see as well.

08:41 ameeshkatariya: Uh, Token, if you open the webpage. Can you see Token? Now, I.

08:49 RaviMareedu: Did you, did you send me something already?

08:51 ameeshkatariya: Yeah, I sent it on the group.

08:53 RaviMareedu: Okay, I didn't see. Yeah, give me one second. Okay, I see the website. Let me click on it.

08:57 ameeshkatariya: Yeah, and as soon as you open the website, on the top you'll see a space called Token.

09:07 RaviMareedu: Yes, paste API Token to begin.

09:09 ameeshkatariya: Yeah, so here's the server. On the WhatsApp group, I just pasted, uh, a token. You can just copy that and paste it there.

09:18 ameeshkatariya: This is basically a POC, so right now you have to paste the token. Eventually you will have a login. If you choose to go forward with taking the software from us, you will have a login and you can just simply log in there and you can keep it and you can keep testing the platform.

09:34 ameeshkatariya: If anytime you want us to add more features for the backtest, then everything will be added here on the backend When you paste the token, in hardly like a second or so, all of the buttons should be, should go active.

09:51 ameeshkatariya: And then if you just click on step 1 and run backtest, you should start seeing the data.

09:57 RaviMareedu: So I know something is loading. The graphs did not show up yet, but I'll wait a few minutes because I think it'll be easier if, uh, if you don't repeat it twice, let's wait a few minutes for Sudhir to join to continue with

10:08 ameeshkatariya: this one.

10:10 RaviMareedu: Yeah. I asked you 2-3 questions, which is why you continued, so I'll stop asking questions.

10:18 ameeshkatariya: We can wait, we can wait.

10:19 RaviMareedu: So yeah, yeah, that's nice. Yeah, I understand. This looks, ah, nice and, ah, very user-friendly, ah, but we'll, we'll talk.

10:28 RaviMareedu: Uhm, so, so you, this is what you guys built. Nice. Uh, any other updates beyond this?

10:37 ameeshkatariya: Uh, no. All of those, because there were some errors on step four, right, with regards to the defense confirm where we went to bull, where we went to defense only in two days.

10:48 ameeshkatariya: So that also we updated on the dashboard now, so you can

see the new results if you want.

10:54 RaviMareedu: Look here only. Okay. Got it. Got it. Got it. And the other question we had was that blanking, uh, the, uh, once, once we triggered, remember the.

11:07 RaviMareedu: Once we sold 50% for, uh, to get into defensive mode from, uh, from, uh, whatever mode, uh, we were gonna blanket, we were not gonna repeat the trade for like two months.

11:19 RaviMareedu: Do you remember that discussion?

11:21 ameeshkatariya: Yeah, yeah, yeah. I remember

11:22 RaviMareedu: that discussion. We can do here or is it separate? You should do.

11:26 ameeshkatariya: Yeah. So this will be the next feature that we add. So now, because the main baseline, uh, uh, you know, the software has been made, we can actually iterate pretty quickly over the next features as well.

11:38 ameeshkatariya: So what you said, right? Uh, we will, I can get it on the platform by tomorrow morning. I can get that as a, as a option there.

11:48 ameeshkatariya: The blanketing and we can change that blanketing settings also.

11:52 RaviMareedu: That was a, you know, uh, yes, I think that was a critical question to answer because remember, uh, the three years, the returns were really bad that took away the, the whole, uh, uh, 10 year return into a not great mode.

12:08 RaviMareedu: So we're hoping that, uh, that blanketing would, uh, make a big difference. So I think we would want to just, um, get that answer, if a blanket makes a difference or not.

12:20 ameeshkatariya: Yeah. Yeah. That makes sense. Yeah. I'll add it to the platform.

12:24 RaviMareedu: So blanketing we need, and then, uh, next time, uh, Compassion, I'm just reading, looking here. Uh, so I think I'll look at the WhatsApp group, uh, here, uh, let me see.

12:40 RaviMareedu: I'm looking at the, uh, the request that we had, uh, ignored that rule for two months.

12:51 ameeshkatariya: WhatsApp,

12:52 RaviMareedu: you can look at the questions. I think there's a three questions I asked. Uh, TradeLogs have error. You mentioned that it should go from full board.

13:01 RaviMareedu: It should go to full board once estimate 200 beats to the

upside, because it was this last TradeLogs had that error, not the older TradeLogs.

13:09 RaviMareedu: Then the next, uh, ban 200 estimates. 2% for both upside and downside kind of stuff. I think, uh, rather than selling it when, uh, as soon as it breached, we should wait till it, uh, Remember we were going to, and then, uh, we were going to use, uh, for the short strategy, try SVXY from 2012 to now instead
13:34 RaviMareedu: of 10% use, 20% instead of 30% use, because SVXY is not, uh, 1.5 times, I think.

13:46 RaviMareedu: So that's why we said double, double the bands and using S. So those are the requests last three times. Uh, so your platform to answer those results.

13:56 RaviMareedu: So sure. We can, we can wait for updates after this. Uh, yeah. Yeah. But this looks like a lot of work to build this, huh?

14:05 RaviMareedu: Was it hard to build this?

14:06 ameeshkatariya: Uh, no, not exactly hard. We have been planning to build this for you since some time. It's just that now all the strategies are shifted on the server.

14:16 ameeshkatariya: So it took us some time. It some time to get it all done and then verify that if it's working the similar way that it worked on my laptop.

14:23 RaviMareedu: So

14:23 ameeshkatariya: yeah, a few more features in the pipeline, right? A login page so that you can keep accessing it. And all of that, so it took some time and we'll be back to the normal now that everything has been shifted.

14:36 ameeshkatariya: This was on my timeline for quite some time and I had some, uh, difficulties with managing my time earlier. And now I think I've got it.

14:45 ameeshkatariya: Back to a bit more normalized schedule. So yeah, now if you ask for any change, that'd be much quicker.

14:50 RaviMareedu: No problem. Um, let me see if Sudhir is going to join.

15:01 Insight Fusion Analytics: So basically, we were just trying to, uh, check, but half of these things wouldn't, were not possible, you know, Ravi, on Excel.

15:07 Insight Fusion Analytics: So I thought this would be so much more visual and convenient for you.

15:12 RaviMareedu: Yes. Yeah. This is, uh, yes. Yeah.

15:16 Insight Fusion Analytics: So you can. You can even play around with the parameters, plus you can see the graph in real time. So it will be like two things in one, which we tried like earlier, but it wasn't possible on Excel, you know?

15:24 Insight Fusion Analytics: So we thought this would be like perfect one.

15:29 RaviMareedu: Should be, um, uh, So why don't we, I think Sudhir is going to join very shortly now. And,

15:39 Insight Fusion Analytics: uh, we can wait for five. That's okay. Not an issue. And

15:43 RaviMareedu: then we can just play with it. Yeah, stress.

15:46 Insight Fusion Analytics: No stress. Yeah.

15:47 RaviMareedu: Then we can close it today. Early in, uh, hopefully we can spend 10 minutes when he joins and we can play with it.

15:54 RaviMareedu: And then, uh, uh, beyond the, uh, this is great. And, uh, I think why don't we follow through, uh, with, uh, with those, uh, two, three things, uh, that we wanted to look at to understand, I think, is that

16:09 ameeshkatariya: We

16:10 RaviMareedu: can add the

16:12 ameeshkatariya: blanketing feature also, so that. You can enable that, and shortly after that, we'll also add more data, like, more data, so we can pull back the,

16:25 Insight Fusion Analytics: uh, Amish, can you cross-check if this is working? Is this working?

16:30 ameeshkatariya: Uh, yeah, for me, it's working.

16:34 RaviMareedu: Can you open it in an

16:38 Insight Fusion Analytics: incognito mode or something?

16:43 ameeshkatariya: Yeah, yeah, yeah. Let me do that.

16:48 Insight Fusion Analytics: Hey Sudhir, how are you?

16:51 Sudhir: Hello guys, how are you doing?

16:52 Insight Fusion Analytics: All good, all good. Just, uh, waiting for you, like, uh, we have some exciting things to show you.

16:59 Sudhir: Oh, awesome. Thanks.

17:05 ameeshkatariya: Yeah, it works even on incognito. Okay.

17:12 Insight Fusion Analytics: Now we're working

17:14 RaviMareedu: on Mala. Now, let me share mine. Allow, share, screen or window? What should I do? Yeah,

17:24 Insight Fusion Analytics: screen

17:24 ameeshkatariya: would be better and I can just guide you how to use it.

17:27 Insight Fusion Analytics: Okay, okay. I have to, there's a token. I have and there's a strategy. So we have to press something on that.

17:33 ameeshkatariya: Just, uh, I have pasted a token on the WhatsApp group.

You can copy that.

17:39 Insight Fusion Analytics: Okay,

17:39 ameeshkatariya: okay, okay. And in a second, the entire dashboard will unlock. This later will get translated to a lot

17:46 Insight Fusion Analytics: of, yeah.

17:46 RaviMareedu: Can you see my screen guys?

17:55 ameeshkatariya: Yes, yes, yes.

17:57 RaviMareedu: Are you seeing the backtest dashboard screen? Yeah,

18:00 ameeshkatariya: yeah, yeah.

18:02 RaviMareedu: What, uh, what they say? Uh, for me it's, I put the.

18:04 ameeshkatariya: You are seeing a not secure error. Can you, can you just, uh, remove this token? Uh, just, uh, remove this token and paste the fresh token again, like from the WhatsApp group?

18:34 RaviMareedu: Sudhir, ah, they created a, oh yeah, got it, got it, got it. Sudhir, can you, are you, are you able to look at the screen?

18:43 RaviMareedu: They created a webpage, ah, with backtesting, ah, stuff that we can

18:48 Sudhir: play with. Yeah, yeah, I see that.

18:53 RaviMareedu: It goes till, you see here, the period, I don't know if you can see my question, it goes till from 2015-2019.

19:03 RaviMareedu: Yeah. And then it, ah, so you

19:05 Sudhir: can play with

19:14 RaviMareedu: RSI, uhm, and then, uhm, RSI sell at 75, we said, right? We can change it to, uh, 80 there instead of

19:19 ameeshkatariya: 75, and we can go and click on the Runbacktest button.

19:24 RaviMareedu: Runbacktest, uhm, Kagger is 19 at that point, and then, uhm, Alpha versus Pi, they have this 5.65, Alpha versus Pi, uhm, if you do, uhm,

19:38 Insight Fusion Analytics: so Amish, for every run, uh, will, like, have you added the feature where they'll be able to download the trade logs after

19:45 ameeshkatariya: every backtest? No, that- so, the idea, downloading the trade logs and then the blanketing feature that Ravi and Sudheer requested last time is something that's in the, in the pipeline.

19:55 Insight Fusion Analytics: Okay, okay, okay, got it, yeah.

19:57 RaviMareedu: Yeah, I don't know what this- so, so, Amish, I know we were waiting for Sudheer to kind of also to listen in, so you want to just- He's

20:11 Insight Fusion Analytics: here, Sudheer's here already.

20:14 RaviMareedu: Yeah, you want to give a three-minute summary now that Sudheer is here.

20:16 ameeshkatariya: Yeah, so essentially what this dashboard is, right, that we've shifted all the backtesting code to the backend, and now anytime you change the parameters and run- click on the run backend, you essentially calculate everything again with the new parameters.

20:30 ameeshkatariya: Here, almost everything that we are assuming within the strategy, right, could be slippage, commissions, multiple different things. We also have an option of choosing the broker.

20:40 ameeshkatariya: Which is IBKR, I'll add more because we can now, we can import the commission settings of that particular broker. So that we'll assume the exact percentage basis points which that broker charges.

20:52 ameeshkatariya: And then those backtesting results can actually be the same commission structures, you know, inside. You can also decide what could be the slippage at the time of buying or selling, you know, at trades because slippage is always a concern.

21:05 ameeshkatariya: And, uh, if let's say, for example, Sudhir, last time you mentioned that it was going from 100% and shifting to 50% in a defensive state right after two days, even though we wanted to not go to it longer.

21:20 ameeshkatariya: Now, we put it at indefinitely, maybe we want it to be 30 or 45 days. So now the defensive confirmed days, right, I've put it as a variable there on the webpage.

21:31 ameeshkatariya: Right now it is at two days, and you can change it to 30, 40, 60, 80 days, depending on your choice.

21:49 RaviMareedu: My research sharing guys.

21:50 ameeshkatariya: Stop share.

21:52 RaviMareedu: Here's mine. Yeah.

21:55 ameeshkatariya: Yeah. It's it's, it's fixed now. Okay. Okay. So if you come here. Let's say I go to step one and let's say defense confirmed days is two days, but no, I want to hold it for 30 days.

22:09 ameeshkatariya: And after that, if it is still there in the market has not changed, then I can shift down to 50%.

22:14 ameeshkatariya: And if I run the backtest, then I get the data back. So it actually went better for me, right? That three are like waiting for 30 days to go to defensive actually worked out better.

22:29 ameeshkatariya: And my final value changed 384,000 instead of 300. 50,

50,000 before.

22:35 RaviMareedu: So I know we are anyways talking about this. So I forgot this rule. Give me once again, RSA Recovery, Rebuy Threshold, Defense Confirmed.

22:46 RaviMareedu: Remind me, what is this Defense Confirmed is? Can you remind me what is this? Oh,

22:49 ameeshkatariya: yes, yes. So Defense Confirmed is, is basically, uh, if let's say we went directly from cash to 100%, we said that we wouldn't go back to defensive, which is 50%.

23:02 RaviMareedu: Correct. Because it's in a

23:03 ameeshkatariya: 50% percentile. So we'll ignore the SMA 50 trigger for, and I said that instead of indefinitely, we should wait for a certain number of days before we do that.

23:15 ameeshkatariya: Oh, so here we can set that number of days to either 20, 60, 90, whatever you want to do now.

23:22 RaviMareedu: Just change it to 90 just for kicks. Okay, maybe, maybe it doesn't. Change it to 20 just for kicks, just for confirmation.

23:54 RaviMareedu: Okay, got it, got it, got it, got it. Okay.

23:59 ameeshkatariya: So, if you observe any error with the trade log, you can let me know instantly. Everything is a quick fix.

24:04 ameeshkatariya: But I'll also add the download option so that this becomes a bit easier to look at. This is a bit difficult, I know.

24:10 ameeshkatariya: But, yeah, the first step for us was that we can get the platform to you and then we can make all the changes that you want.

24:18 ameeshkatariya: So, usually how this works out, right, is that I'll just quickly come back to Zoom. Usually how this works out is that once this platform is created, Okay.

24:26 ameeshkatariya: We offer two kinds of services. One is that we can keep updating, adding more settings if you want to the dashboard that maybe you want to change some other parameter or you want to play around with some other factor which you want to get added to this strategy.

24:40 ameeshkatariya: And, secondly, if you want us to do more. You can research on this strategy going forward, you know, in a week-to-week basis that, okay, Amish and Anmol, you can go ahead and research for us and you can come back with some research on this parameter and these are the goals for this month.

24:55 ameeshkatariya: So you have different kinds of arrangements that we work at, completely up to you how you want you want us to iterate on this strategy

going forward.

25:03 ameeshkatariya: So, yeah, and this tool you can keep using by your own and you can tinker around. And as soon as you hit an issue, you can post it on the WhatsApp group and in the morning, you or in the evening, whenever, as soon as I'm awake or I'm in my night, I can look at it and get a result.

25:22 RaviMareedu: Okay, got it, got it, got it. I think, I think, uh, that's good. Um, I think the main thing would be, uh, uh, those, uh, uhm, those, uh, those, uh, yeah, in the next one week, if you can just get those answers, uh, so that we understand the alpha of the strategy versus, uh, pi versus pi.

25:46 RaviMareedu: Because, uh, with, uh, long strategy, I don't think we did long from 2011 yet. Uh, no, no, no.

25:53 ameeshkatariya: I'll add the, no, we have, we have done the long from 2011. I've also sent the

25:57 RaviMareedu: trade logs.

25:57 ameeshkatariya: Yes, yes, yes. Okay,

25:59 RaviMareedu: so long 2011, and then, uh, the, the VIX fix was gonna be, uh, the other one, which was before VIX, which went out of market.

26:10 RaviMareedu: So that was the one that we can go from 2011 also looks like, uh, SV, VX, Y or something I put in that one.

26:17 RaviMareedu: And then, uh, that is, uh, uh, uh, and then, um, the other, uh, short strategy was only available for, I believe from 2018

26:29 ameeshkatariya: or 2018. Yeah. Because there's no data for So

26:33 RaviMareedu: we might

26:33 ameeshkatariya: have

26:33 RaviMareedu: to ignore that. We might have to ignore that and use these two to go from 2011 onwards kind of stuff.

26:41 RaviMareedu: So those, those, um, those, if we can get, at least we know, and, and of all the things, the most important thing was, uh, was that, uh, was a blanketing defensive.

26:52 RaviMareedu: So if

26:52 ameeshkatariya: you

26:52 RaviMareedu: can give that information, we can, uh, we can, we can then go to the next steps of what tinkering and stuff.

26:59 RaviMareedu: Like that, but that, that one, if you can get us a couple of thoughts,

27:09 Sudhir: just to clarify again, you know, so it is just the strategy that we have

the dashboard for, or is it combined?

27:16 ameeshkatariya: Step two, step three, step four, all four of them, you

27:18 Sudhir: can, all four of them.

27:19 ameeshkatariya: Yeah. I think there's a small error, which it's hitting on step three. I'll just check it once. I like PC predatory short.

27:29 ameeshkatariya: No, it's working. So, uh, step three. And then step four, yeah, all of them are working.

27:40 Insight Fusion Analytics: So also, so to take it to a more production level, right. The way it will go, it is like, I mean, of course you can just take this dashboard and play around with it.

27:48 Insight Fusion Analytics: I mean, if you want to have all possibilities, we can submit all to you, or if you only want to have the best possibilities, we can have the best backtesting results to you.

28:11 Insight Fusion Analytics: So that'll be the one way we go take our research forward, you know. And the next one would be the pattern recognition, you know, where you don't need to trade.

28:20 Insight Fusion Analytics: So we strategy always in all conditions, you know, to give you a layman's example, let's say if it's a HFT strategy, this strategy is working better only on Mondays, this strategy is better on Mondays when on Mondays and what do you say between 9am and This strategy is working better on Mondays when

28:38 Insight Fusion Analytics: RSI is greater than 70, you know, I'm just giving you a random example. So these are the kind of detailed, uh, statistical analytics we will be going into and which we can plug in play and always try out results.

28:50 Insight Fusion Analytics: So that will be the second layer of a statistical analysis. The third layer would be, I mean, these couple of layers would be just to make this strategy as good as we can, you know, like the topmost, topmost end would be just to add a machine learning model on top of this.

29:05 Insight Fusion Analytics: Beyond this, the next step would be forget everything else. Everything else we probably, uh, uh, forget what's done. This we set as a benchmark, whatever, uh, we have done on the contrary, we just try to find a strategy.

29:19 Insight Fusion Analytics: It could be any strategy in the world that we try to better it, not be like Indian. We just care about making money.

29:24 Insight Fusion Analytics: Right? So it doesn't have to be through these four ways. So we first optimize what completely we squeeze everything, what we've

done.

29:32 Insight Fusion Analytics: And then our research team, our trading team, uh, with Amish will be finding or trying to find something that will be, of course, better than what we've already got.

29:42 Insight Fusion Analytics: Once we know that we have reached an equilibrium, this strategy can't do better. Then we try to go to something else, completely else, something that we've already worked upon, you know, through, uh, so yeah, these are the kind of ways we go.

29:55 Insight Fusion Analytics: And if you, uh, opt for a research-based model, you know, a front-end like this, we'll, we are more than happy to even, uh, customize it for you.

30:03 Insight Fusion Analytics: We give this front-end at no cost.

30:07 RaviMareedu: Yeah, I'm just, uh, writing down in WhatsApp. So I go questions that, uh, no, I get that. So let me just formalize, uh, think about thinking out loud or writing out loud.

30:20 RaviMareedu: One is about questions to answer would be the step one, step two from our end. Uh, we'll be really need, uh, uhm, the other one was, uh, Synthetic, Synthetic.

30:31 RaviMareedu: Uh, I mean, Synthetic Q Pro is very easy to build. Uh, the Google has a formula, very simple formula. A lot of people have published, uh, published that.

30:41 RaviMareedu: I've seen that in, uh, many websites as to backtesting from like 1950 onwards, 1970 onwards. They use that formula to get into the Q Pro and do that.

30:49 RaviMareedu: It's very, uh, uh, very basic from what I understand. It might, uh, it might not be basic for me, but, uh, for based on what people are doing.

30:58 RaviMareedu: So it's very simple. There's very, based on the interest rate, uh, there's a, there's a formula.

31:02 ameeshkatariya: Okay.

31:02 RaviMareedu: So

31:02 ameeshkatariya: 1960

31:03 RaviMareedu: or something. On this one, you can, if you

31:09 ameeshkatariya: have any reference links, you can send it to me. I look through them and I can instantly get it. From a code standpoint also, if this is implementable, what's the data points that we require?

31:18 ameeshkatariya: And we'll fetch that from, you know, the sources and get

that Ubro calculations done, uh, sorry, uh, the SVIX and SPXU calculations done before 2018 as well.

31:29 RaviMareedu: Uh, yes, yes, yes. Uh, uh, I'm just, uh, because I think if I say, I'll do it tomorrow.

31:41 RaviMareedu: How it won't happen, uh, give me one second here. Just doing it, uhm, tch-tch-tch-tch-tch-tch-tch, just doing it, uhm, uhm, formally.

31:56 ameeshkatariya: Thank

31:57 RaviMareedu: you, uh, thank you.

32:05 sudhir: I have a question, I just logged on through laptop, uhm, and I copy pasted the link. Uh, so, you mentioned there is a token, what's the token number?

32:13 sudhir: Paste it here. So, it's

32:13 ameeshkatariya: a token, this here, this, this, uh, this one. So, this entire string, right, you can just copy that and paste it in that token space on the top.

32:27 ameeshkatariya: And the moment you paste it in a second. The dashboard should unlock and you can, if you just click on run package, you should start seeing the data.

32:36 ameeshkatariya: So, this will shortly just translate into a login page now. So, you guys, we'll give you an email and a password.

32:42 ameeshkatariya: And. And then you can access it via the login page because this token thing is a bit, uh, this is a bit developer friendly.

32:48 ameeshkatariya: This is something that I find the easiest to do. So, I've just put it there in order to just get the dashboard to you faster.

32:55 ameeshkatariya: And now I'll change it.

32:57 sudhir: So, we'll. Okay. So, you'll change that. So, we don't have to do the token

33:00 ameeshkatariya: moving forward. No, no, no. In fact, even now, have you put the token anywhere? Have you run backtest?

33:06 sudhir: I'm just trying to do that. I'm using my phone on WhatsApp and copying the token into the email. How

33:12 ameeshkatariya: done it? Do you want me to send it over email quickly, if you want that?

33:18 sudhir: That should be fine. I just teamed with myself. So, let me see.

33:21 ameeshkatariya: Okay. So this actually has cache memory, so as soon as you put the token in, you would run one backtest, and if you reload the page, you won't have to enter the token again, so it's here also, it's a bit friendly, but the token thing is in general is a very scary endeavor for most people, so I, care.

33:40 ameeshkatariya: For me, it's like I'm always playing around with the token. For me, authentication is much simpler via the CURL terminal than it is through a front-end dashboard, because I'm always dealing with tech.

33:51 ameeshkatariya: So that's my, so I'll definitely get that changed. Yeah,

33:59 RaviMareedu: uhm, it's not copying properly, but, uh, you can, If you type in Google, uh, Synthetic Kubera Formula, it's giving, uh, it's giving like a longer thing, and, uh, and, uhm, and, uhm, in, uhm, and it's kind of a pain in when I copy it, it's not coming well.

34:27 RaviMareedu: Okay, so

34:27 ameeshkatariya: you can just send the link, or have you asked it on Google itself?

34:31 RaviMareedu: Yeah, just Google, literally, because this was like six months ago when I asked Google, because it's copying from Reddit. Ah, okay, see, if you

34:38 ameeshkatariya: can click a screenshot

34:42 RaviMareedu: of Okay, okay. Uh, uh, uhm, Gemini staff. And, yeah, I can do a screenshot of that also. Uh, let's do it.

34:58 RaviMareedu: Uh, so we can just, Uh, Ctrl-Shift-O.

35:09 ameeshkatariya: Oh, Sudhir, were you able to run the dashboard via the token?

35:15 sudhir: Yes, I'm able to, yeah. That's why I'm looking at it. So, uh, what was the, uh, initial date of the, uh, data?

35:23 sudhir: I mean, was it like 2017?

35:25 ameeshkatariya: Uh, 2019. 2019 is when this is from. You might see a small error on the calendar option on the top left.

35:32 ameeshkatariya: But this backtest is being done from 2019 to 2026. From So now expand it to the most number of data points that we haven't been.

35:45 ameeshkatariya: You can tinker around with the date. Also, I'll shortly inform maybe by you guys is morning. You'll have the data in in corruption.

35:51 ameeshkatariya: Also, like the data building with.

35:56 RaviMareedu: So I would say, uhm, so now now just based on what animal has said and you have said, I think the first question would be the I think the the the three questions from the.

36:09 RaviMareedu: Other day, the second question would be if you can do a scintic you probably that would be the long only that would go over different states.

36:16 RaviMareedu: You know, we've been in a bull market state for a long time, so

it will go through different states so that that that is really helpful and you can you can.

36:25 RaviMareedu: So those would be the two big things. After that is is further, I think, Anmol, what you're mentioning would be further optimization and we can kind of look it because first we want to kind of clear the cobwebs in our brain regarding the question we have regarding where we are now, which, uhm, which

36:47 RaviMareedu: we want to be clear about. You know what I mean? So the long strategy is a main strategy. There is a quick short strategy since 2011.

36:56 RaviMareedu: We can run it. XVXU, which is the first short strategy, it's unclear how, because we won't have too much back-testing data on that.

37:04 RaviMareedu: So I don't think we'll be able to do too long on that, but at least long plus the SVX short from 2011.

37:12 RaviMareedu: That would be important. And then, just long only from before, will give me, give us a little bit of clarity on where we are.

37:20 RaviMareedu: And then, Anmol, the next steps would be, like you said, running 1000 and paravariabes, or 1000 combinations of the same parameter.

37:30 RaviMareedu: Then we'll ask you to kind of, uhm, based on that, these two data points, then we can ask you to kind of help us, uhm, with regards to optimizing this based on the parameters.

37:41 RaviMareedu: The parameters we gave you, and then you're suggesting that you can use that as a benchmark and try to create something else, uhm, uhm, which, which, who knows, which might involve a hot set racing, or, uhm, or traffic making more money than this, we should do

37:58 ameeshkatariya: that, obviously,

37:59 RaviMareedu: or buy lottery tickets, ah, every Tuesday afternoon between, ah, twelve and four in Mumbai. So, keep us posted, but we are, we are all, ah, we are all yours.

38:10 ameeshkatariya: Yeah, yeah, yeah, yeah. No, absolutely.

38:11 RaviMareedu: Because you look like you have a, like a, like Vasudev Kutum, you have a big umbrella. Of parameters, looks like you, you are the statistics guru, you guys.

38:20 RaviMareedu: So you guys can look at, uh, looks like a lot of variables that, that we have not thought of, you know, I'm joking, but I'm serious in the sense that, you know, the only.

38:31 RaviMareedu: Looks like you are able to kind of be a little bit more,

38:36 Insight Fusion Analytics: I mean, we deal with like plenty of new data sets,

right? So it just gives us a more, uh, edge

38:41 RaviMareedu: to like. The, uh, we don't know what we don't know. So, yes, I'm happy to, we can, we can go there, but those will be like a little later, I think first, this one.

38:52 RaviMareedu: It does make sense where we are thinking.

38:56 ameeshkatariya: Yeah, I mean, I think the first step would be that all the data points that you

39:01 Insight Fusion Analytics: have

39:02 ameeshkatariya: requested, they, these get on the dashboard and you can click and play around with them. Maybe the blanketing feature you want to change the timeline, something like that.

39:09 ameeshkatariya: Just like the defensive confirm days, right? So once we have all of that, you can play around with that and then we can start with the optimizations also.

39:16 ameeshkatariya: Because the first step is to achieve everything that you have asked for. And second would be next to actually improve it again, more from our, that is, that completely comes in our, uh, part of the code where we have to run our statistical models to get how we can make it better.

39:31 ameeshkatariya: Or maybe it's a whole new indicator that we're supposed to add. That's again, you know, research. So yeah, makes sense.

39:36 ameeshkatariya: I agree. We'll, we'll get

39:37 Insight Fusion Analytics: this, all It could run sometime, so that it makes more money. That is the second thing, where the pattern recognition, and the third is the entire research base, where it could be anything under the universe, you know,

40:02 sudhir: One step again, you know, sorry, jumping to the third step directly, so this is the idea that we had again, this is like a cursory idea again, a beginner level idea, so you guys have seen, you know, you talk to other people who come to you with similar ideas, so obviously better, so what do you think

40:19 sudhir: about this and how to improve on this, again, you know, let's just straight to that, ah, question, jump to number

40:24 RaviMareedu: three, so, what

40:26 sudhir: is it, when it comes

40:27 RaviMareedu: to you? Your opinion regarding what we are doing, right, is that what

40:30 sudhir: you are asking? Exactly, it's, it's. What is your opinion, again, you

know, so I will, so I will,

40:34 Insight Fusion Analytics: so I'll be clear first, so first we need to know the potential of this strategy, where it is, where it can reach, you know, where, once we try out all the possibilities, once we try out all the patterns with what this has, then we can have a very clear idea where it stands, you know, where is this worth

40:52 Insight Fusion Analytics: going into a production phase, is this something where, how much percentage of your portfolio should put in it, you know, like the financial management aspect as well.

40:59 Insight Fusion Analytics: So once we have that, those answers, it's much easier for us to tell that, ok, no, rather than this, just go somewhere else, or we're like, ok, this is the best thing that we've got, everything else that we've got, you know, is nowhere near what we, you have, you know, so once those benchmarks start

41:13 Insight Fusion Analytics: setting in, it's much easier for us to

41:27 sudhir: The question is, how can you come out, you know, what are the indicators, or, you know, how can you come out without really losing a lot, is the question.

41:35 sudhir: So probably we have to look at the years where we have been hit really hard. I mean, you know, if S&P drops 10, again, this strategy is losing, like, you know, 3-8.

41:43 Insight Fusion Analytics: Like Ameet said, one more step would be in this would be to probably add certain indicators that will help us, like, either cut down on the losses or to get more of the, what do you say, profitable runs, you know.

41:59 Insight Fusion Analytics: After all those steps, it'll be, it'll give us a much clearer idea.

42:03 ameeshkatariya: Yeah.

42:04 Insight Fusion Analytics: Right now, with this dashboard, you can, of course, play around with it the way you want. On our end, when we put in our, uh, machines on it, it can be just try out all the variations, like 10 million variations in one shot.

42:15 Insight Fusion Analytics: And then we don't have to look at all of them. We'll just be like, give us the best, uh, that have the highest profit, less drawdown, et cetera, whatever we say, you know, so after trying out all possibilities.

42:26 ameeshkatariya: And here, I think as a just a small point as to what Sudhir asked for, it's that in this strategy, right, we have the strategy correct, it's making us money, but we don't have a way to understand macro market conditions.

42:39 ameeshkatariya: So, while we are correctly observing micro market conditions as to where the SMA is going or where the RSI conditions are hitting, we don't have a way or we don't have a look at the macro market.

42:51 ameeshkatariya: In general, in any trading strategy, we need to have both ends. The macro market should be guiding whether the bot should operate in the first place or not and the micro bot, the entire micro market strategy should be taking the trades.

43:06 ameeshkatariya: So, here, where you are saying, right, that in the bearish market, it's not performing well, we need to figure out a way where we can give the strategy the context of the overall market.

43:16 ameeshkatariya: Now, here in the back testing, it's pretty easy because we have all that data and what we here will have is that we have, uh, overfitting.

43:25 ameeshkatariya: If I go behind, look through all the models, we'll have overfitting. So, what we essentially do is that from the day we start researching and looking at the backward conditions, if let's say I do forward validation from the last day, we need to figure out certain conditions which will help us figure

43:41 ameeshkatariya: out that bearish phase. And I. Right now we are going for that blanket, right? Like you're not taking trades. Maybe it is very possible that not exactly matching that 3 month timeline, you know, to not take trades.

43:53 ameeshkatariya: We might also have a 5-6, we might have 5-6 indicators like ADX, I don't know, just putting it out there, which would be indicating to us that okay, this market is not meant for us and we need to wait it out, something like that.

44:07 sudhir: To be frank again, you know, the reason that we are doing all this is, it is very difficult to predict the impact.

44:11 sudhir: You know, it is like guessing. And the reason that we are doing this endeavor is to take the guessing out of the equation.

44:18 sudhir: We want to be very objective. Correct. We want to go by the indicators again, you know, to make sure that again, you know, because over the last three or five times, again, you know, we've been guessing.

44:28 sudhir: Quite a bit. And, you know, and to be frank again, I joke that if Ravi and me wouldn't have talked, you know, wouldn't have called each other over the last five years, we would have been like four or five million dollars richer.

44:39 ameeshkatariya: Okay.

44:41 sudhir: Because we always try to anticipate stuff that's not there and, you know, try to investor come out of the markets.

44:49 sudhir: So we want to take that, uh, you know, object is subjectivity out of the equation.

44:54 RaviMareedu: And it's true. The thing that we are, uh, Amish to the same point that you mentioned that, uh, Sudhir is mentioning.

45:03 RaviMareedu: Yeah. So what we were willing to give up is, uh, give up a little bit of returns, uh, and just stick with the standard protocol so that we, we beat SPI.

45:16 RaviMareedu: Our goal is to beat SPI 5%. That's our goal. Alpha, you wrote there in the backtesting, That's a long year since 2019.

45:26 RaviMareedu: That's very easy to do. I think since 2019, because it's been mostly a bull market and any drawdown has been very, uh, very strong, uh, pull, uh, upswing, uh, subsequently.

45:36 RaviMareedu: So, but, but, you know, a longitudinal pair of times, you want to find a simple strategy that, you know, this is like super simple strategy, right?

45:43 RaviMareedu: This is not like, this is, this is like 1970s or 1980s are calling us with strategies. Like this is so old strategy that people have tried and given up.

45:52 RaviMareedu: And moved on to a hundred times level beyond this. So that's our, yeah. So we might not be able to predict, uh, is what, uh, the macro.

46:00 RaviMareedu: So

46:00 ameeshkatariya: where did you discover this strategy first? I'm just, uh, very curious as to how you came across this.

46:05 RaviMareedu: Uh, so, you know, we were, uh, reading lots of blogs as to how people were doing and that the SMA, long SMA, uh, SMA strategy has been described.

46:17 RaviMareedu: It's like everybody talks about basic stock market strategy. We were always in levered space, uh, you pro and we didn't know how to sell it.

46:24 RaviMareedu: So when we're doing research how to do it, there are some blogs that will talk about using this as an option kind of stuff.

46:30 RaviMareedu: Then before that, there's one more strategy where in the balance, uh, uh, bonds with this, with you pro and bonds.

46:36 RaviMareedu: And, uh, that, that that's been beaten to the bush and that we started that this one, then we put it in the chat box to see the back testing and, uh, they were hallucinating and giving us past two results.

46:48 RaviMareedu: So that that's how it's just looking back. Uh, so that's it. So now, uh, yes, Sudhir, continue.

47:00 sudhir: So the question is, I mean, you know, so, so where do we look at it? So we have. We have this strategy where roughly, you know, it is yielding, you

know, the combined strategy is yielding 18 to 20%.

47:10 sudhir: Okay. And

47:11 RaviMareedu: one thing. We don't know that.

47:14 sudhir: But exactly. Exactly. It's probably. It's lower than that. Exactly. That is true. Because if you're just looking at the last seven years, again, you know, it's higher, but there've been the, you know, from 2011 to probably 2015, the market hasn't

47:30 ameeshkatariya: very

47:31 sudhir: And it's been going down, too, again. So, the question is, we don't really know how it performed in, like, 2015 or, I think it was 2018 was a bad year, too, right?

47:39 sudhir: So, we don't, that's not part of our data set. So, we need to look into that.

47:45 ameeshkatariya: We sent you the results since 2011, also, for YouPro, if you remember. For the data sets, yeah, yeah.

47:51 sudhir: Was it like 15% or something like that?

47:54 ameeshkatariya: It was lesser than that.

47:55 RaviMareedu: Lower. Lower.

47:57 ameeshkatariya: Lower.

48:00 RaviMareedu: Barely 0.5%. Alpha was barely 0.5%.

48:05 sudhir: And that too, it did not include, again, you know, the taxes. Again, for us, if we are doing in a taxable account, returns will be much lower.

48:13 sudhir: So, how do we move to the next step again? You know, now that, you know, we found you guys, again, you know, now that you know us, we have some, you know, you guys have data and you know what we are looking at.

48:24 sudhir: So, how do we take it? Accelerate this process and stuff, you know, going like one step at a time. How do we move it a little bit?

48:29 sudhir: Faster, you know. So, should we be sticking to this strategy or should we be looking at something else or, you know, how do we accelerate this process?

48:36 sudhir: Because me and Ravi, we have been thinking about this for the last six months and, you know, we've been going back and forth.

48:42 sudhir: We try to do as Ravi mentioned, we try to do by ourselves. And then, you know, LLM and, you know, we also actually, you know, I don't know if Ravi told you, we also had a couple of freelancers doing it for us.

48:51 sudhir: But none of this did really pan out. But I think, again, we feel

comfortable talking to you guys and I think we believe that, you know, you guys have expertise and, you know, you can deliver on the product.

49:02 sudhir: So the question is, again, you know, where do we, again, how do we take it, you know, from this idea to a production-level idea?

49:09 sudhir: Again, it doesn't have to be this idea as such, but again, you know, we need to move forward again. Should we ditch this idea?

49:14 sudhir: I mean, we need to move fast. That's what I'm

49:16 RaviMareedu: trying to tell you. Moving fast, fast is good, Sudhir, but, but our question has not been answered yet. We need, like, that question to be answered, right?

49:23 RaviMareedu: We need backtesting, long, long backtesting, right? Before we, like, like Anmol said, to use that as a benchmark and go to the next one.

49:32 RaviMareedu: We can do concurrently two things, but this one, we, we did, like, 80% of the back information, but we need, like, 100% of the data, right?

49:40 sudhir: It's 100%, Sudhir. So, yes, it's 100%. So, Ravi, you're talking about last, you know, even beyond that, you're talking about 1970s data?

49:48 RaviMareedu: No, no, it's possible, but, but at least 2011 onwards, just, uh, that this one, with blanket, put it, like, last time we asked you the question, right?

49:55 RaviMareedu: From 2011 on, long one strategy, and they're adding up. Long Svicks as a short one, that we should be able to get very quickly in a couple of days, at least that data should be

50:03 ameeshkatariya: there,

50:03 RaviMareedu: and it would be nice to kind of do long, everybody else has, uhm, on blogs are able to do, like, long Uproad, a lot of people on their own are doing it, so I don't think it's too hard to do, like, long data from 1970s and 80s, just Upro and SMA average kind of stuff, so that is our question, so I think

50:21 RaviMareedu: the first question You I, I, I don't mind doing concurrent, but we can't jump without doing step one, I don't want to go to step four, if you're, I think step one should be, I don't mind doing one and four together, but, but, but one should be done for

50:33 sudhir: sure, right?

50:36 RaviMareedu: You, we'll talk. Later, but, but that's what we're asking is,

50:41 sudhir: again, you know, we need to move a little bit, you know, we need to answer this question and kind of, you know, we need to get to some kind of a, uh, idea of where is resolution of this, you know, question we've been stuck with this strategy for the last, you know, four to six months.

50:58 sudhir: We need some answer as to is the strategy worthwhile pursuing it further or should we start looking at something else?

51:10 ameeshkatariya: Yeah, no, it makes sense. Absolutely. I think the first step would be to get more data and also the blanketing feature.

51:16 ameeshkatariya: That will be the fastest things, which I fast track so that those features are on the dashboard. And you can change the data.

51:23 ameeshkatariya: Let's say I'll try the one that you're seeing right from 1970. I'll, I'll because if it's just reproduction, then it doesn't matter.

51:29 ameeshkatariya: I can just get the data back from there. I'll see what's the availability from actual good sources of data till where they have, maybe they have to 1990s or 2000 or something like that.

51:40 ameeshkatariya: And the best data quality I'll get forward and I'll give it to you. And I'll send an update on the group as well.

51:45 ameeshkatariya: I think we can, we can look forward to that as the next poll.

51:51 RaviMareedu: And, uh, um, and, uh, I think Sudhir, uh, you were asking about step four. So at more than maybe you can, uh, chime in if you're there.

52:02 RaviMareedu: What are the last step? Remember you said we can use this as a benchmark and do it. I think Sudhir is asking if you should just proceed with that.

52:09 RaviMareedu: What are your thoughts on that?

52:13 Insight Fusion Analytics: Sounds good. Like, uh, once we are, uh, once we, I think we still need to get the data till 2011, or you just want to try out all the possible variations for this?

52:22 ameeshkatariya: No, first the data and then the variations.

52:24 Insight Fusion Analytics: Okay. Even before running it out, running the variations, we'll tell you that these are the variations that we are running before putting it in our machine, where we'd be like, no, uh, we can either say, we can even have like initial capital.

52:37 Insight Fusion Analytics: We can change it around. We can have the RSI. We can change all those things around. And we'll ask you that out of these, how many of the, uh, experiments you want to run?

52:46 Insight Fusion Analytics: Once we do that, it'll take us, uh, it'll be a quite a few computational power, but at the end of it, we'll get like the entire set of results where we can, then we can.

52:55 Insight Fusion Analytics: Uh, arrange it in the order we want, you know, where we want it to be something that has the least drawdown or the maximum

return or CAGR.

53:04 Insight Fusion Analytics: So we can arrange it in the order we want, but all the backtesting results, the trade logs for each of these million results.

53:11 Insight Fusion Analytics: million, 10 million results will be there in, uh, will be there with us.

53:17 ameeshkatariya: So it's basically a matrix-based PX model, right? Where we'll be running all the possible combinations. So every parameter that you give within the limits, either or without limits on all the numbers that we can see the available, you know, windows strategy, something like

53:39 sudhir: So that would be fine.

53:42 RaviMareedu: Okay. Okay.

53:44 ameeshkatariya: Okay.

53:45 RaviMareedu: Why don't we circle back later? I think, why don't you do those things, uh, uh, the first one since 2011, uh, the long and short, and then, uh, let's, uh, and then we'll blanket for, uh, two months, like we asked, and then let's circle back.

54:00 ameeshkatariya: Yes. Yes.

54:00 sudhir: Yes. 100%. Understood.

54:06 RaviMareedu: Let us know when you want to give feedback. Yeah.

54:08 sudhir: Okay. Then, you know, Monday morning or something like that, which will be Sunday night for us,

54:13 ameeshkatariya: uh, uh, Monday morning, I might not be available. I'll be traveling again. I think, uh,

54:21 RaviMareedu: Tuesday morning, I think. on. That's fine. Okay.

54:26 Insight Fusion Analytics: We'll keep you updated

54:26 RaviMareedu: on the group. Within seven days, let's try to do that. Okay.

54:33 Insight Fusion Analytics: Sounds good. Okay.

54:36 sudhir: Then. See you guys.

54:36 Insight Fusion Analytics: Thank

Meeting Recording - May 24, 2026

0:00:00 Ajinkya Dhumal: This meeting is being recorded.

0:01:04 Insight Fusion Analytics: Jira, are you back?

0:01:53 ameeshkatariya: Hi Ravi. Hello.

0:02:04 RaviMareedu: Hi Ravi, how

0:02:04 Insight Fusion Analytics: are you doing?

0:02:07 RaviMareedu: Good, good, Unmute. When do you sleep, man? Uhm, your local time, 2 a.m., you're awake. No, it's not 2 a.m.

0:02:14 RaviMareedu: now. Your local time, 6 a.m., you're awake. Your local time, 11 a.m., you're awake. What's going on?

0:02:20 Insight Fusion Analytics: I, I'm a good sleeper. I sleep less, but I sleep nicely, yeah.

0:02:25 RaviMareedu: Okay, good, good, good, good. So, uh,

0:02:30 Insight Fusion Analytics: you guys can carry on, yeah.

0:02:37 ameeshkatariya: You Yeah, can't, uh, wait, let me just show you my slides. Can you

0:02:42 RaviMareedu: see this?

0:02:45 ameeshkatariya: This, uh, this

0:02:51 RaviMareedu: option Nope. Nope. Nope. Nope. Nope. Oh,

0:02:55 ameeshkatariya: so can you just press command option R? It should refresh the entire page. So maybe that it's cached up from last time.

0:03:02 ameeshkatariya: That's, that's why you can't see this option, but when you run the backtest again, no.

0:03:08 RaviMareedu: Let's see. I

0:03:09 ameeshkatariya: initially

0:03:10 RaviMareedu: probably said, uh.

0:03:25 Ajinkya Dhumal: I don't know.

0:03:57 ameeshkatariya: Is it visible now? Because we can't hear, oh yeah, we're on the different screen, yeah.

0:04:54 RaviMareedu: I think, I think it got, ah, I got disconnected when I did that command, ah, option R.

0:05:00 ameeshkatariya: Oh, okay.

0:05:01 RaviMareedu: So, yes. So, that came through,

0:05:04 ameeshkatariya: uhm, okay.

0:05:07 RaviMareedu: That came through, ah, when I do from, ah, 2012 to 2025, I'm getting, ah, 6% alpha with a character of 18%.

0:05:16 RaviMareedu: Uhm, so, I just, I just want to look

0:05:20 Insight Fusion Analytics: at

0:05:20 RaviMareedu: 2018, 2015. 2018 was a good year to do that, ah, blanket. You did the blanket one, right?

0:05:30 RaviMareedu: Okay. Let me go 2018.

0:05:32 ameeshkatariya: Oh, you can, you can do the blanket enabled one disabled, so you can check if it's enabled or not.

0:05:44 ameeshkatariya: Okay.

0:05:45 RaviMareedu: Yeah, it's disabled, but let me enable it now and run the test for 2018 only, I'm running.

0:05:53 ameeshkatariya: Okay.

0:05:54 RaviMareedu: Got, got total written is minus 90% of, uh, value. So let me share, uhm.

0:06:06 RaviMareedu: Oh, what's the deal? All of us doing, both of us doing the same one. I just want to do one or two years so that we are, uh, we can do a quick audit.

0:06:15 RaviMareedu: Let

0:06:15 ameeshkatariya: me

0:06:16 RaviMareedu: get your Zoom space. Uh, your, okay. Amit, share your screen, do 2018. Okay. One second. You prolong.

0:06:26 ameeshkatariya: So,

0:06:27 RaviMareedu: uh, you

0:06:27 ameeshkatariya: want to do first of Jan 2018. 2018 to the entire year, right?

0:06:33 RaviMareedu: Correct.

0:06:33 ameeshkatariya: Okay.

0:06:37 RaviMareedu: It's easier to type.

0:06:40 ameeshkatariya: Yeah. So first I should do without Blanket enabled.

0:07:00 RaviMareedu: Do with Blanket. Okay, you can do without Blanket, yeah, you can do without Blanket. Either way is fine. Just do without Blanket.

0:07:09 ameeshkatariya: Yeah.

0:07:11 RaviMareedu: Okay, we are what? Minus 17%, 16 and a half percent, okay? Now do Blanket enabled. There's something quite odd about it.

0:07:26 RaviMareedu: Show me the logs. Can you make that screen bigger? I can, I made it bigger on my end. Uhm, we, we, Portfolio can't, I mean, losing 90% I feel like there's something wrong about the, about the logs.

0:07:49 RaviMareedu: But let's look.

0:07:51 ameeshkatariya: Started here.

0:07:53 RaviMareedu: So cache to bull 27, uh, reentry. OK, and then Wix. Wix went up so we killed it and then cache.

0:08:04 RaviMareedu: Cache to bull. Again, because, uh, Spy was good, Wix was

good. Then bull to cache. Bull to cache in March.

0:08:21 RaviMareedu: Because, uh, SMA was less than, uh, Spy, we went 75%, uhm, cache to bull, reentry because we were okay.

0:08:39 RaviMareedu: Then we sold it because bull took cache. We killed it because bull took cash because VIX was okay but SPY was, For this year, I don't think we did the blanket 2%.

0:08:58 RaviMareedu: Remember, I think that was, I forgot, this was the year we needed the 2% bands on but we'll do it later and then we sold it again because, yeah, it's, the VIX and SMA200 were floating around.

0:09:04 RaviMareedu: This was the year that we did, that we had a lot of bouncing around. Yes, but April 4th, we lost like 70% loss on April 4th.

0:09:21 RaviMareedu: Let's see what happened here. April 4th, we bought, we went to Bulls. We wholesale market because Pi was more than 200 and VIX was okay.

0:09:31 RaviMareedu: We sold

0:09:31 ameeshkatariya: 2 months later. Almost 3 months

0:09:33 RaviMareedu: later. 2 and a half months later, with most of the portfolio evaporated. Because Pi was below. April 4, June 29.

0:09:46 RaviMareedu: Can you- Can you go back April 4 to June 29? Remember those, let me take a picture so I can compare.

0:09:52 ameeshkatariya: This one? 4th April 28, right?

0:09:55 RaviMareedu: Okay, I have it. Can you- Can you go to take away the- Take away the blanket, ah, take away the blanket now and just run the strategy.

0:10:13 ameeshkatariya: Updated.

0:10:15 RaviMareedu: Show me higher, the returns were like minus 9% or minus 18%, right? If you go up, show me There, okay, I could see it, okay.

0:10:26 RaviMareedu: Okay, then that's fine, as long as you see it. Yes, you're right, now I see it. Okay, show me lower.

0:10:31 ameeshkatariya: This is the April period, I feel.

0:10:37 RaviMareedu: Okay, April 4th, April 4th, and April 6th, it went to different months, because Spy saved us.

0:10:51 RaviMareedu: Spy below 200 saved us here. Oh, Spy, Spy, Spy. It saved us, uhm. And then, uhm, I'm looking, I'm just, I have a picture of the other strategy.

0:11:11 RaviMareedu: I'm just trying to make sure that it followed the rules. June 29th, uhm, so April 4th we spot and April, uhm, June 9th.

0:11:19 RaviMareedu: June 29th, it's sold. There's something, there seems to be

some bug. I don't know. I don't understand this, but, uhm, you bought.

0:11:36 RaviMareedu: May 11th, you bought it at \$36,000. And, uh, June 29th.

0:11:50 RaviMareedu: June 29th, uh. There's something, can you, that, that, that May to June trade, why, why did we lose, uh, why did it gain from, like, on June 29th, why did the trade value, \$53,000, how did it go to?

0:12:08 RaviMareedu: \$107,000. June 29th. Sure? Uh-huh.

0:12:21 RaviMareedu: How did the portfolio value, so on May 11th, portfolio value, you bought \$33,000 stuff. At close, that's \$36,000. On May 11th, the close value was \$36,000.

0:12:34 RaviMareedu: Then on June 29th, what happened? From \$53,000, it went to \$107,000. What is, I don't understand that math.

0:12:40 ameeshkatariya: Let me look. I need to.

0:12:45 RaviMareedu: Why don't we look at that a little later? But, but, uhm, that is one, it looks very odd. The trade, the numbers look very bizarre kind of stuff.

0:12:52 ameeshkatariya: I mean, it could

0:12:53 RaviMareedu: be right, but I don't understand. They look very odd.

0:12:56 ameeshkatariya: Yeah, you know, makes sense. Absolutely. These ones, right?

0:13:02 RaviMareedu: Right, right, right.

0:13:08 ameeshkatariya: Just give me one second. Sorry.

0:13:12 RaviMareedu: Okay, now go back to the same thing. Go to 2015, if you don't mind.

0:13:24 ameeshkatariya: Uh, just change this to.

0:13:28 RaviMareedu: Yeah, 2015, the year is January to December 2015.

0:13:31 ameeshkatariya: Uh, and disable, right?

0:13:37 RaviMareedu: Yeah, first disable and then we'll enable. This is disabled?

0:13:47 ameeshkatariya: Yes.

0:13:51 RaviMareedu: So we had, uh, what? Minus 38%? While pi was like 2% written, that was here. So go to, uh, now enable.

0:14:04 RaviMareedu: Oh, you're doing force. Oh, step one. Yes. Step one. Yes. This is step one. We want step one only. Correct.

0:14:16 RaviMareedu: You did, uhm, okay. You enabled it. Do you want to just review the logs to see if there's any questions?

0:14:20 RaviMareedu: Can you show me the logs?

0:14:21 ameeshkatariya: Yeah. Adios.

0:14:27 RaviMareedu: Review options, uh, 100%, 200%. Oh, sorry. Review options,

let's do 100%. Okay.

0:14:38 RaviMareedu: So, let's me go through the logs here. You, from January 5th, cash to bull, uh, because five is more 2,200 which was okay and then April 2nd you sold because spy was below 50 days, I mean for two days.

0:15:02 RaviMareedu: Uhm, that is correct because the rule of two months it was, we didn't trade for two months. April 10th, defensive to bull because spy was more 2 than 200, that's good.

0:15:17 RaviMareedu: Then, ah, you sold again because, ah, bull to defensive because spy was below 200 day. Uhm, and, ah, defensive to cash because spy because 200 SMA, why did it go, why did it sell July 9th?

0:15:40 RaviMareedu: Defensive to cash because VIX was only 19, so that was not the rule. Spy was 204, 200 SMA is too 205.

0:15:49 RaviMareedu: Oh, Spy went below 200 SMA. Got it. Got it. So July 9th trade makes sense. July 13th, we went to full mode because, uh, Spy 200 day was good.

0:15:58 RaviMareedu: Uh, August 21, Bull 2, Cash, Bull 2, Cash because Spy was there. This was a Bance, uh, Amish, remember we forgot, uh, to do the Bance also, option for Bance.

0:16:19 RaviMareedu: Remember, we were going to do at least some Bance. I think this year was all Banned, uh, it's roaming around 200-day SMA kind

0:16:25 ameeshkatariya: of stuff. Correct, correct, correct.

0:16:28 RaviMareedu: So that, that Banned optionality might help. Then October 26, re-entry, Spy was more than 200-day moving average, which was good.

0:16:36 RaviMareedu: Then Bull took cash on November 13th because Spy was just below 200-day moving average. And then we went back because Spy went up again, uhm.

0:16:52 RaviMareedu: And then we sold, uhm, Bull took cash because, oh yeah, Bands. Amish, this is the year of Bands. We took away, we gained 10% return, we, we gained 10% return by, uh, by doing that blanketing, two month blanketing, SMA 50 is no longer triggering the, the drama that it was triggering before.

0:17:18 RaviMareedu: So that was 10%. So if you add Bands to this, we might be able to, uhm.

0:17:25 ameeshkatariya: I don't So

0:17:26 RaviMareedu: if you add a few we've got, we've got a lot more. I know of a drama, but it's revolving around 200 now.

0:17:45 ameeshkatariya: Yeah. So

0:17:46 RaviMareedu: I think, if you put the 2 or 3%, 1 to 3% bands, that might save the day. So, uhm, okay.

0:17:54 RaviMareedu: Can you, can you show me annual returns once more for, from 20? 2011 to, ah, 2025. 2011.

0:18:05 RaviMareedu: 2025. And then, and then no blanket, no blanket, don't do blanket.

0:18:12 ameeshkatariya: Ah, okay, one second, let me. It will run its course and then we can.

0:18:18 RaviMareedu: OK, now show me the returns. OK, so show me the data. Annual returns. Click on that. OK, so which were the target years?

0:18:35 RaviMareedu: I think

0:18:35 ameeshkatariya: 2015, 2018.

0:18:39 RaviMareedu: We did both those audits, right? Just now.

0:18:41 ameeshkatariya: Yeah,

0:18:41 RaviMareedu: yeah, audits. Uhm, so I think, I think the blackboard. Blanket is working fine.

0:18:47 ameeshkatariya: No, this is without the, but with the blanket.

0:18:52 RaviMareedu: Yeah, I know, but we did audit both those years, right? Those negative years. What I'm saying is, those two years we went and checked the blanket.

0:18:59 RaviMareedu: If you remember, we just did an audit. The 50-day SMA is not overdoing anything kind of stuff. Correct, correct, but the returns were

0:19:08 ameeshkatariya: not

0:19:08 RaviMareedu: that. 2015, it's not doing anything, but 2018, something bizarre is happening with the trade locks because we got like minus 90% and that, that, that, those audits.

0:19:18 RaviMareedu: Yeah, yeah,

0:19:20 ameeshkatariya: yeah, I can follow up on that. Yes, yes, I'm doing that one. And then I

0:19:22 RaviMareedu: think, um, the bands, is it, is it possible to add bands for the SMA 200 optionality or anything?

0:19:33 RaviMareedu: Bands for everything? Yeah, yeah,

0:19:35 ameeshkatariya: I can,

0:19:36 RaviMareedu: I can, Okay, okay. We don't, I think adding banks from 2015 will hopefully take it from minus 38% to minus 20% or less.

0:19:55 RaviMareedu: And then, ah, 2018, uhm, we might, ah, the, 2018, the odd

logs, we should look, uhm, this is the, I, I just need to, ah, I didn't look at older stuff, I did audit the older stuff,

0:20:11 ameeshkatariya: uhm, okay.

0:20:14 RaviMareedu: Okay, ah, those four things you were gonna do, ah, I think you did two, right? I don't know. Let me look

0:20:20 ameeshkatariya: at it. Yes.

0:20:21 RaviMareedu: You did one and two. I did two already. And then,

0:20:25 ameeshkatariya: ah, The data comparison I'll do now.

0:20:27 RaviMareedu: That is, that is background work. That is not such a big deal. If you can add bands, if you can message that, that bands will be added and do that.

0:20:35 RaviMareedu: I

0:20:35 ameeshkatariya: think, I'll do that. I'll add that as a point to the group.

0:20:46 RaviMareedu: This looks very nice, Amish. I mean, it's working. I mean, other than, you know, sometimes it's something odd is showing up and, you know, and you're fixing it right away kind of stuff, but mostly it's working very well.

0:20:57 RaviMareedu: Awesome. And, uh, I think that I'll be, I'll be interested in looking at 2015 and 18, uhm, with bands. Okay.

0:21:09 RaviMareedu: And with that corrected data.

0:21:11 ameeshkatariya: Okay. Okay. Awesome. And I'll

0:21:13 RaviMareedu: also look at

0:21:13 ameeshkatariya: the comparison.

0:21:14 RaviMareedu: And, and once you confirm the, the synthetic data and real data is somewhat matching between 20, uh. Between 2011 to 2018, because we have both for that.

0:21:25 RaviMareedu: We can, we can look at 19 older data and just deep dive into that a little bit. Just to make sure that it's making sense kind of stuff.

0:21:33 ameeshkatariya: Okay. Okay. Awesome.

0:21:35 RaviMareedu: That's my end. I'm free today. And also tomorrow, actually, my family just left to India.

0:21:42 ameeshkatariya: Uh, so

0:21:43 RaviMareedu: I'm

0:21:43 ameeshkatariya: kind

0:21:44 RaviMareedu: of around at home, not working. So, tied up in a wedding out of town, uh, in a different state in US, so that's why he could not join.

0:21:53 RaviMareedu: So, we'll catch up, uh, he'll join, uh, but I think this is

predominantly what we need. We are at the last stages of what we asked you to do, and you have done like 97% good.

0:22:05 RaviMareedu: Of the stuff is almost done, I think, so. Okay, okay.

0:22:11 ameeshkatariya: We

0:22:11 RaviMareedu: are making good progress. If we can take over that hump, we'll be happy. Nah, Anmol is smiling there, so. After so many phone calls and stuff.

0:22:20 RaviMareedu: Some, some, some. Some end goal is seeing light at the end of the tunnel.

0:22:26 ameeshkatariya: Yeah, yeah, yeah.

0:22:27 Insight Fusion Analytics: Many more.

0:22:28 RaviMareedu: Okay, so that's my end. I'll let you guys, uh, tell me anything else, and, uh, I want to speak with Anmol regarding, uh, next.

0:22:34 RaviMareedu: Next steps after that. Someone had something to join or say anything?

0:22:41 Insight Fusion Analytics: No, no, no, we, uh, we are good. Like we just, we anyway have an internal team meeting lined up right now.

0:22:46 Insight Fusion Analytics: So if you want, I can connect any time, like, uh, when you want after this.

0:22:50 RaviMareedu: Okay. No, like, like, I think me and Sudhir spoke after the last meeting, um, I think, uh, remember, I think you, you said step one, step two, step three, and I was hung up on step one.

0:23:01 RaviMareedu: I said, let's complete step one before going to step three and four kind of stuff. And Sudhir was asking if we can do padding.

0:23:07 RaviMareedu: So, um, for, uh, I think, uh, I think you, you, what you propose was you in the background, look at multiple variables and combinations on your end for the same strategy on your end.

0:23:21 RaviMareedu: Use this, what we get as a benchmark. And you run multiple strategies and figure out what would work from further optimization of this strategy from your end.

0:23:30 RaviMareedu: And then, uh, the other one was, um, was, uh, based on, uh, number of inches of rain that happened on March 2nd or something like all variables, so forth.

0:23:39 RaviMareedu: So many variables, you said, I'm just joking, but so many variables you can add and come up with something that, that can, that can give tagger.

0:23:45 RaviMareedu: So Sudhir and I spoke, why don't you give, uh, figure out how you would do that? Uh, and what, what are the mechanics of that?

0:23:53 RaviMareedu: And maybe arrange a meeting with, uh, You Sudhir and myself and propose, and we can ask you to kind of see where we go with stuff like that.

0:24:01 Insight Fusion Analytics: Sounds good. Sounds good. So yeah, at least, uh, good that you have your picture. So, yeah, now, uh, so yeah, we'll take, uh, we can talk about it.

0:24:10 Insight Fusion Analytics: We'll discuss how can we keep that going. And, uh, yeah, sounds good. We already have a clear picture, picture on how do we

0:24:16 RaviMareedu: go about it. So the main thing is, because we've been talking for a couple of months here, you know where we stand.

0:24:23 RaviMareedu: So. So keep that in mind with regards to, uh, what we're doing and where we are standing and what we are trying to achieve kind of stuff, uh, as opposed to, because there might be somebody else who's a, uh, who, who comes from a different perspective from a like, I'm talking about customers.

0:24:41 RaviMareedu: We are customers, right? Some, some other customers might be like a big fund with something else. Some of them, um, they are not that, or there's so many variables, right?

0:24:49 RaviMareedu: You, you looks like you kind of understood where, where we are of more or less kind of stuff. So you keep that in mind and be perspective, uh, with regards to proposals and stuff like that, but this is helpful.

0:25:00 RaviMareedu: And, uh, why don't we complete those few steps for this step one and, uh, talk about other stuff later on as we go along.

0:25:07 Insight Fusion Analytics: Sounds good. Sounds good. Okay. Let's connect,

0:25:08 RaviMareedu: uh, maybe whenever you're free. Yeah, I'm on working next weekend. I worked last weekend. So it's kind of little, once, uh, the work, once I work, it's kind of gets very hard to kind of spare.

0:25:22 RaviMareedu: I can spare 30 minutes, 45 minutes, but sparing multiple hours might be tricky. Um, so if you are, uh, if your schedule allows, uh, these couple of days, if you want to close the loop on this one, that would be better, uh, and you can call me or message me anytime if, if, uh, if I don't reply to the

0:25:39 RaviMareedu: message, just call because I don't, uh, I don't have a WhatsApp alerts kind of stuff. So it's just because so many

0:25:43 ameeshkatariya: messages Oh, okay. Okay. No, I think I will start with it right away. And then maybe today, if I can do something or tomorrow morning, I

can let you know, and then we can get on a quick call to discuss that point number three, four and five as well.

0:25:56 RaviMareedu: Okay. Thank you guys.

0:25:58 ameeshkatariya: Okay. Thank you so much. Okay.

0:26:00 RaviMareedu: You guys

0:26:06 Insight Fusion Analytics: can stay back now. Okay. Um, yeah. Okay. So guys, same thing I wanted to, uh, discuss again, like I think that before Amish came also, I discussed the same thing.

0:26:16 Insight Fusion Analytics: I'll just repeat once again. How do we go ahead from this? How do we make sure that like, uh, like, first of all, any submission that we ever make to Amish, to a client should never be buggy.

0:26:30 Insight Fusion Analytics: You know, like if we are charging 1 lakh, 2 lakh, 3 lakh, 10 lakhs to a client, a client can never expect a bug on that.

0:26:39 Insight Fusion Analytics: Why do we never do a testing before submitting to a client? So that's, that's the one thing. Secondly, how do we never miss a deadline?

0:26:47 Insight Fusion Analytics: How do we make sure and most importantly, how do we make sure that none of the clients ever personally message me and, uh, and get upset about it?

0:26:56 Insight Fusion Analytics: So I want for, I want to first of all hear from you guys. Secondly, if we are going to move forward.

0:27:00 Insight Fusion Analytics: For this, things need to go in a systematic manner. Every single thing needs to be in to do IST. Every single thing should have a deadline.

0:27:08 Insight Fusion Analytics: Everything single thing should be assigned. If something is not something, uh, if there's a task you don't want to do, make it very clear, we'll find someone else to do it.

0:27:15 Insight Fusion Analytics: If there's a task. Uh, what do you say that, uh, you don't think it belongs to in your, uh, umbrella, make it very clear.

0:27:23 Insight Fusion Analytics: We'll find someone else, but all of those things need to be clear. If you have taken up a task, then it needs to be done.

0:27:28 Insight Fusion Analytics: It can't be in the end that it's not my part, not somebody else's part. But the most important thing is system.

0:27:34 Insight Fusion Analytics: And something more important than that is I, a client can talk like that to me. So what is the solution?

0:27:40 Insight Fusion Analytics: I want to hear from all, all three of you, how do

we, how do we move forward? So that things are smooth.

0:27:45 Insight Fusion Analytics: You know, we are only taking five client projects right now. Bye. Uh, it will be impossible to handle 50 client projects.

0:28:04 ameeshkatariya: Um, if I am supposed to go first, so, I just think that, uh, we have a, we usually have a scope leak with the client.

0:28:21 ameeshkatariya: It's very common because, uh, mostly when clients give us a task, they're not really sure as to what, they just want the results.

0:28:30 ameeshkatariya: They don't usually know about all the steps. So, maybe. Okay.

0:28:33 Insight Fusion Analytics: Entire, uh, Mahabharata should be done within two weeks. It can't be like six weeks. We are taking one, uh, full week to respond and then we say, Oh no, your expectations are unrealistic.

0:28:43 Insight Fusion Analytics: No, we do get done in three days. We said, Hey, this is everything under the universe that we could try.

0:28:48 Insight Fusion Analytics: Like we tried all these variations. Okay. Apart from this, this is what we have tried. We can't go beyond that.

0:28:53 Insight Fusion Analytics: Clients can't come up with like, uh, we take a couple of weeks to run a backtest that takes us like a couple of hours to run.

0:29:00 Insight Fusion Analytics: And then they find some error in there. And then again, they improve the strategy. A client is going to fire, is firing me so much for so much delay.

0:29:09 Insight Fusion Analytics: And we are, it's like client messages, client groups are filled with excuses. You know, we are saying sorry for, uh, some kind of delay.

0:29:17 Insight Fusion Analytics: We are saying sorry for missing out on message for something or the other test. Sorry. It's just like, there's a strict rule that I've had.

0:29:22 Insight Fusion Analytics: I'm not putting in all for you guys. We never say sorry. I don't sorry to the client at all, but it's like, even I have to say sorry, because what do I even say after so much delay, like every single client is reminding me, like, Hey, the deadline's approaching, the deadline's approaching, I can see,

0:29:37 Insight Fusion Analytics: I can kill a client for you guys, you know, but it needs to be like once a month, you know, uh, also once in six months, once in a year, that's okay, but if every single, uh, other day a client is messaging me, uh, Ravi politely messages me, Michael and Sam are a little more aggressive about it,

you

0:29:53 Insight Fusion Analytics: know, like, uh, Ash, Ashmeet is polite about it, but even he's, uh, not pleasant about talking to me after this point.

0:29:59 Insight Fusion Analytics: So how do we, how do we handle this? Like, uh, I'm not definitely going to, uh, listen to these unpleasant messages from the clients.

0:30:05 Insight Fusion Analytics: Either you can shut the company or if you are going to take up a task, then it needs, then, then we don't give, uh, at the end of the project, we don't say that.

0:30:13 Insight Fusion Analytics: Okay. Okay. This is something unrealistic here. And then my task is to give you all projects. That's it. After whatever I'm doing after that is only a bonus.

0:30:20 Insight Fusion Analytics: Okay. Uh, in consider, I don't know anything in between that I gave you all clients after that it needs to be dealt with perfectly.

0:30:29 Insight Fusion Analytics: Like, for me, the most difficult client to deal with this call every single other minute, there's something or the other happening, but it's going smoothly.

0:30:36 Insight Fusion Analytics: That's fine. All the other clients are coming up after one message a week, and still I have to listen to something unpleasant.

0:30:43 Insight Fusion Analytics: I'm in a really bad mood after, especially after. After what Michael has said, you know, I'm not even sharing some of the things, but, uh, I'm, I'm in a really bad mood after that.

0:30:51 Insight Fusion Analytics: So I want to make sure that things go in a system. We never miss a message. Seven days starts to take us one day.

0:31:00 Insight Fusion Analytics: If you can't do it, it needs to be said. Sometimes. Someone else has to do it within our timeline. Me, I'm never going to be involved in the last 24 hours of the client meeting, whatever work needs to happen.

0:31:10 Insight Fusion Analytics: I can't be staying up late night and trying to small fix and stuff. Fine. A few times it was okay, but not anymore.

0:31:15 Insight Fusion Analytics: So what is the solution for this?

0:31:17 Chirag Pandya: Solution, I think it should be, we create some kind of system. We set about weekly targets, like each Monday we discuss about what's due Friday.

0:31:31 Chirag Pandya: We give an update every, uh, we talk to the client, we give an update every Friday. So week to week, uh, expectations are clear from the start.

0:31:40 Chirag Pandya: This is what we are going to do. Anything else comes up, it's going to take, uh, lower priority than that.

0:31:46 Chirag Pandya: In some of the cases, it, I think this could be happening where, uh, Jira, newer requests takes priority and can lead to, you know, older requests being ignored.

0:31:56 Insight Fusion Analytics: Newer requests from the same client or new client?

0:31:58 Chirag Pandya: Uh, yeah, the existing client. So we can do, uh, yeah, a system will definitely help.

0:32:06 Insight Fusion Analytics: OK, so what do you propose like a? All three of you guys. I want to hear from you guys.

0:32:17 Chirag Pandya: So, with Michael, uh, so what do you, uh, like, what do you think the main problem is, uh, delays or

0:32:30 Insight Fusion Analytics: bugs

0:32:31 Chirag Pandya: are not being profitable?

0:32:34 Insight Fusion Analytics: Don't tell me what's the issue, like, you all need to debug now.

0:32:37 ameeshkatariya: Uh, I can explain the Michael issue, actually, how it started out. It essentially begins with my analysis of Michael, no offense to Michael, but the thing is, that Michael is basically wanting to start a business of selling his strategy to other people.

0:32:54 ameeshkatariya: Now, with his other friend, which is Miles, he started this discussion with us that his strategy is profitable, and then he went on to discuss that, okay, this is profitable and now I want to backtest it across a larger time frame and professionally because he was exploring some issues.

0:33:12 ameeshkatariya: Then, uh, after two or three meetings, he complained that all our backtests were negative and that is not possible because his backtesting, his entire strategy is profitable.

0:33:21 ameeshkatariya: So I asked him that if he has done a backtest, so you can just give me a reference and basis that reference, I can also decide where I'm going wrong because if your backtesting is going profitable, then of course, ours can also, you know, match that and achieve that profitability for you.

0:33:38 ameeshkatariya: In the next meeting, Michael actually confirmed that the backtest that he had done with miles was not applicable because it was all synthetic data.

0:33:47 ameeshkatariya: They did not realize that the backtest that they ran was

all on fake data. Then. Then I assumed that he did not have a profitable strategy and since then his only effort has been to let us know and get a profitable strategy out of us, which was never our aim in the beginning, our aim was always to gum
0:34:09 ameeshkatariya: . We complete the backtest and give him the results, but since then it has stretched out. At some point, I don't know where in the conversation has he assumed that we'll be giving a profitable strategy to him, our only aim in the beginning, even on our first call discussion, our aim was only to give

0:34:26 ameeshkatariya: us, give him the backtesting results. Where the split has happened, right, is because Michael realized that his backtesting was all wrong.

0:34:35 ameeshkatariya: And now, because he's on a deadline to deliver the projects to his clients, he is behind us so that he can get the, he can, you know, uhm, get it profitable.

0:34:48 ameeshkatariya: So that is where the situation is at. The only issue is that, uhm, Michael initially knew that his strategy was profitable and then once he understood that his own backtests were wrong, he was we, he is now in a race to complete profitability so that he can deliver to his clients who has, who is actually
0:35:05 ameeshkatariya: taken as per his messages, he has taken a pre something money from. So that's the situation with Michael. Overall, uh, so in the middle to discover profitability, I figured out a few variations as per the current strategy, which it was all the variations were, uh, uh, loss making almost all of them.

0:35:34 ameeshkatariya: There were none, which one, which was \$62, but the target is 3000. And, uh, the other way, the thing is the hourly based or one conversation meeting.

0:35:45 ameeshkatariya: And Michael had, it was just that very quickly we went over and then he said that, okay, if we do have an hourly split, why not?

0:35:53 ameeshkatariya: We can figure that out. I was looking into it for some time, changed the code completely. And once we did the hourly split, turns out that certain phases are profitable.

0:36:02 ameeshkatariya: And certain times of the day are not. Now here, the last message that he has sent over that, how has it drastically shifted?

0:36:10 ameeshkatariya: That is actually pretty normal because if we are doing a lot of trades and then we remove the loss making ones, of course, the profit profitable ones will come up.

0:36:19 ameeshkatariya: That's the last report that we sent him. And now, because we are, he's asked us to run a backtest only on the times which are profitable.

0:36:27 ameeshkatariya: That is where the issue starts because it'll be, it'll of course become, uh, not profitable because we are only running in those times phases.

0:36:36 ameeshkatariya: Now the entire strategy, the timing, all of it gets restricted to that particular window. So that is why it is now loss making.

0:36:44 ameeshkatariya: And hence he, MGC is pretty profitable, but ES is back to losses. That's what he means. He's not able to, I think he didn't not understand that, but yeah, that is.

0:36:56 Insight Fusion Analytics: Okay. But regardless, let's just make it quick. Like, how do we end this? Like what are, what is our action plan now?

0:37:02 Insight Fusion Analytics: I mean, I want all of these backtest to be submitted in one Excel, like one, uh, uh, in one Excel, all the variation should be there from start to end, whatever he wants, ask him to write and let's discuss all the variations that we are going to try out.

0:37:15 Insight Fusion Analytics: And in one shot, we can give them all the backtests.

0:37:19 ameeshkatariya: No, but Anmol, my main point

0:37:21 Insight Fusion Analytics: being, yeah, sorry.

0:37:22 ameeshkatariya: Dad, I'm home. Only point was to give a backtest on the conditions that he had set up with the added that we gradually expanded that.

0:37:33 ameeshkatariya: Okay. A bit of a few more exit clauses and a few more, uh, you know, windows, EMA windows. That we were going to test out.

0:37:41 ameeshkatariya: Since then, we have expanded into nearly 36 backtests, which were never part and we have never said one thing. We've always given him back.

0:37:48 ameeshkatariya: From our end, all the deliverables are complete. Like, every deliverable to date is complete because the only thing that we had to do in this

0:38:12 Insight Fusion Analytics: And then we forget this. And he gets that and there's no leverage that we have on him. Like, uh, right now, just, we need to sit with him.

0:38:18 Insight Fusion Analytics: What are all the variations that we're going to try out? Okay. We are going to tell him that, uh, this, uh, we have figured it out that this strategy is pretty much not profitable, but we are going to try all these.

0:38:28 Insight Fusion Analytics: We, uh, variations. Okay. One, two, three, whatever he wants, 10 million. We can give 10 million one shot. It'll take us two

hours to run that code.

0:38:35 Insight Fusion Analytics: Okay. Let's sit and discuss with him or I want from us. What is, what are all the variations that we are going to give to him?

0:38:43 Insight Fusion Analytics: That is one thing that I want. Secondly, I've given you my front end know that through my front end, we can give a profitable trade.

0:38:48 Insight Fusion Analytics: Like I've given this to you guys one or two weeks back. I don't know why we haven't used it yet.

0:38:53 Insight Fusion Analytics: We can give him one profitable, uh, version from it for sure. If you can sit with me in one hour, I'll find you a profitable version.

0:39:00 Insight Fusion Analytics: So I don't know why. I mean, it's just like we discussed something on call and it's never going to happen.

0:39:06 Insight Fusion Analytics: So I don't see, I don't see a way how we go ahead on this. I've already told you all you all you give me parameters.

0:39:12 Insight Fusion Analytics: I'll find you one variation that'll do well on this. We need to give him one variation. That's it.

0:39:30 ameeshkatariya: Uh, okay. Chirag, have you seen Michael's entire project so far?

0:39:38 Chirag Pandya: Uh, I haven't, really. I just know that it's a backtesting project, that's it. I don't know what the actual strategy is here, but, uh, the point that you mentioned about, uh, it being profitable in a few hours or certain hours of the day, that I think it's a confirmation bias and a good strategy.

0:40:05 Chirag Pandya: It shouldn't work like that. It should be not only good at picking entries, but also rejecting bad entries as well.

0:40:10 Chirag Pandya: So, if we, yeah, I don't think this can perform good in live. It can be good for a backtest, but it would be biased.

0:40:19 Chirag Pandya: That's all I know of so far, but, yeah, if you're setting a confirmation bias that you know something is good and you program the strategy to work according to that parameters.

0:40:31 Insight Fusion Analytics: I have all the solutions to this, okay? How do we remove, like, a confirmation bias? How do we remove? By having a validation set.

0:40:41 Insight Fusion Analytics: It's simple.

0:40:42 Chirag Pandya: Yes.

0:40:43 Insight Fusion Analytics: So,

0:40:44 Chirag Pandya: uh, yes.

0:40:44 Insight Fusion Analytics: It's a simple. It's simple. Like I can do this in 10 minutes, but I don't know how, uh, how do we go ahead?

0:40:52 Insight Fusion Analytics: Like I need, give me the backtest in an Excel format. I'll give you something in 10 minutes. If, if with a bias, I'll find, uh, a good strategy for sure without a bias.

0:41:04 Insight Fusion Analytics: It might be difficult. Okay. But, uh, I don't understand how do we not use a validation set to actually find a good strategy?

0:41:16 Chirag Pandya: So, uh, what do you think Amish we can immediately do with Michael? Like, uh, Can we communicate this to him better way?

0:41:23 Chirag Pandya: Um, manage his expectations somehow.

0:41:29 Insight Fusion Analytics: So where are all the results in one Excel? Can I see one Excel where all the backtesting results are there?

0:41:34 Insight Fusion Analytics: Can I see it?

0:41:37 ameeshkatariya: Yeah, I can. I can generate it. In general, Michael requests a PDF, so that's the only one I send, but I can generate an Excel also.

0:41:44 ameeshkatariya: But it's a lot of different variations already. So I'll send, so I can send you separate Excels for all of them?

0:41:53 Insight Fusion Analytics: In one Excel, all the backtesting results can come, right? Yeah. Yeah.

0:41:58 ameeshkatariya: All variations can come

0:41:59 Insight Fusion Analytics: here in one Excel. That's it. Where, uh, yeah, that's doing it, right. Client can ask in whatever format, but we should have a standard format to look at things, right?

0:42:12 Insight Fusion Analytics: For now, it's like, I can't even see the strategy. I don't know, like, they're all PDF. How do I see the strategy?

0:42:25 Insight Fusion Analytics: I need to know all the possible, from you guys, I need to know all possible parameters that could affect this.

0:42:31 Insight Fusion Analytics: It could be time. It could be, I don't know, how many indicators are we using over here?

0:42:37 ameeshkatariya: We have one is the Lux algo indicator and and the rest we have EMA pairs. About eight, I think.

0:42:47 Insight Fusion Analytics: Okay. So two indicators.

0:42:51 ameeshkatariya: Correct. That is correct. Generating the Excel.

0:43:07 ameeshkatariya: I have the results. So I'll just.

0:43:09 Insight Fusion Analytics: In that Excel, there

0:43:10 Chirag Pandya: should be

0:43:11 Insight Fusion Analytics: a, there should be a trade log also.

0:43:14 ameeshkatariya: Yeah, yeah, the trade log as well, and the config at that

point. So

0:43:19 Chirag Pandya: everything, uh, just a thought on more, like, should we go down this path where we, you know, promise clients profitability, this can go down.

0:43:34 Chirag Pandya: This can lead to some unexpected, this kind

0:43:35 Insight Fusion Analytics: of,

0:43:35 Chirag Pandya: uh, conflicts.

0:43:37 Insight Fusion Analytics: I want to have a discussion with you guys on how do we make a. Strategy profitable. I'm waiting with my front-end ready that if we have a backtest ready, how do we, what all things do we do for optimization?

0:43:49 Insight Fusion Analytics: I just haven't had the chance to talk to you guys. Like how do we really optimize the strategy? What is the way that we actually take it to profitable?

0:43:56 Insight Fusion Analytics: There are 10,000 numbers. And I'm telling you, if as a statistician, if we can't take it to profit, forget the client, we are not going to, we are going to tell the client, we are never going to be, we have to make it clear that we are only giving the backtest, but we should be able to get a profitable

0:44:10 Insight Fusion Analytics: strategy, or we should be able to be very clear that this strategy is not good enough. Next time the client comes up with this strategy, we're like, no, we know it for sure, this strategy will not work.

0:44:21 Insight Fusion Analytics: Okay. We should know it. We should try. When can we say, we'll try 1 million, 10 million, 100 million variations, and then we should be like, this is only this is impossible to get right.

0:44:32 Insight Fusion Analytics: Currently, we are, it's like currently, see those people don't understand statistics. Okay. Any statistics guy will come and say that all the backtests that you are submitting have got so many biases in them, you know, if you don't have a validation set over for your backtest, it's going to have so many

0:44:47 Insight Fusion Analytics: biases, it's going to have a confirmation bias for sure. We are just lucky that we are getting clients that really don't know any statistics.

0:44:53 Insight Fusion Analytics: They are just depending on us. They are, uh, you know, they're not educated enough to find flaws. If I was the client, I would, I would be.

0:45:00 Insight Fusion Analytics: So angry that you don't have a validation set for your strategy should be keeping the last one year's data, at least, uh, as a, as a

backup, you will only take, like, if we are in 2020 right now that, uh, the backtesting should end on 2019 and the last and the data and the patterns should be only gotten

0:45:17 Insight Fusion Analytics: from the last, uh, from the year before 2019 and last one year should be a validation. We are not doing it.

0:45:23 Insight Fusion Analytics: We are lucky clients are not finding that error in our, in our work. That strategy is never going to work in real time.

0:45:32 Insight Fusion Analytics: But yeah, uh, answering your question, I wanted one day's discussion on what do we really do in optimization with you guys?

0:45:41 Insight Fusion Analytics: I've got everything ready. You need to sit and give me first the result in one certain format in an Excel where I can actually, uh, put it in my front end and get some results out of it.

0:46:22 Insight Fusion Analytics: Thanks. Bye.

0:46:54 ameeshkatariya: Master Trade Log, wait one second, there's something wrong here. Let me, let me see if I can compile those values as well, but yeah, till then you can try this.

0:47:09 Insight Fusion Analytics: So, uh, uh, there's a trade log over here. This is the strategy name. Is that what you're saying? What does this variant mean?

0:47:21 ameeshkatariya: Which one's the end? That's essentially we have different sets of EMAs that we have tested. 933 pair, 935, 1540, all of those.

0:47:32 Insight Fusion Analytics: I want to know one backtest. Okay, so this is one backtest. Correct?

0:47:37 ameeshkatariya: Correct, correct, correct. It's also split by one backtest as well.

0:47:41 Insight Fusion Analytics: So, this is one backtest, right? All these are trades from one backtest.

0:47:48 ameeshkatariya: Yes, yes, yes, yes. Correct.

0:47:50 Insight Fusion Analytics: In third, fourth, fifth, sixth, seventh, eighth, ninth, tenth. Okay. Which means all trades for all backtests are there over here, correct?

0:48:00 ameeshkatariya: Yes, correct.

0:48:02 Insight Fusion Analytics: Instrument, Trade, Short, Entry, da, da, da. Okay. Where is the, ah, one second. Yes, PNL. This is perfect. So much can be done only from this.

0:48:21 Insight Fusion Analytics: See, now I'm going to show you all two ways. One, when the client is unrealistic and when the client is realistic.

0:48:26 Insight Fusion Analytics: Okay. Now, Now when the client is being

unrealistic. We'll give him something unrealistic. Okay. When the client is actually like Karl, honest, we'll give him something realistic.

0:48:37 Insight Fusion Analytics: Okay. So now, uh, give me one second. Uh, where is the PNL for this? This is the PNL for this trade, right?

0:48:56 ameeshkatariya: The gross PNL, yes, correct. Perfect.

0:48:58 Insight Fusion Analytics: Perfect. Okay. So, uhm. Mhm. Wow, this is amazing.

0:49:40 Insight Fusion Analytics: And if we have done so much, then, Yeah, so much can be done on this. Let's see, yeah, space map.

0:49:54 Insight Fusion Analytics: Okay, so this is the master trade law. It's a CSV, right? Can you send me an Excel?

0:50:03 ameeshkatariya: Yeah, this is an Excel.

0:50:04 Insight Fusion Analytics: Excel, right? Okay, perfect.

0:50:06 ameeshkatariya: Yeah, this is in .xlsx file only. Excellent.

0:50:11 Insight Fusion Analytics: Okay, now after this I want you all to take over and choose the parameters, okay, which we can.

0:50:16 ameeshkatariya: And this is total 24 variants here.

0:50:20 Insight Fusion Analytics: Okay, enough, enough for us. To have an experiment, uh. Choose File, Master, Trade, Logs. Okay, uh. It's good. I can't see.

0:50:51 ameeshkatariya: So, will it try different values for each?

0:50:56 Insight Fusion Analytics: Let's see. Let's see what it'll do. Okay. For now, it's not getting this.

0:51:00 Chirag Pandya: What's the issue? Only the ones that you have tried, Amish, so far, and only the ones that are present in your file.

0:51:05 Chirag Pandya: It gives, uh, gives you a better good cutoff, uh, if you can think of it, like, in that way. It gives you a good cutoff.

0:51:13 Chirag Pandya: Okay. This side of, uh, the values, the distribution is like this on this side of the cutoff, and distribution is like this on this side of the cutoff.

0:51:22 ameeshkatariya: Ah, okay, okay, okay, okay. Got it.

0:51:27 Chirag Pandya: But it has to be done, uh, you know, pre-run.

0:51:34 ameeshkatariya: Oh, okay.

0:51:36 Chirag Pandya: More like a distribution analysis.

0:51:42 Insight Fusion Analytics: You all will see some good stuff. Okay, let me, let me show you all. Uhm. Choose file.

0:51:58 Insight Fusion Analytics: Okay, this is everything, right? Now, can you all pick the parameters that you all want to try out?

0:52:06 ameeshkatariya: Well. What the parameters as to what it will?

0:52:11 Insight Fusion Analytics: If we choose, if we choose the, um, instrument, it will mean that it will give us, okay, let's try this out.

0:52:20 Insight Fusion Analytics: Okay. We'll choose the instrument, right? So, uh, we will train the trade ID is, uh, no. Is trade ID giving us, uh.

0:52:31 ameeshkatariya: Trade ID is the primary key, yeah.

0:52:40 Insight Fusion Analytics: Uh, okay, so we need to add an index, right, over here, just, uh.

0:52:56 Insight Fusion Analytics: We're good here? Yeah, So, I'm going to give you a demo now.

0:53:36 Insight Fusion Analytics: Uhm, first is, we are going to choose the instrument over here.

0:53:43 ameeshkatariya: Uhm, okay.

0:53:54 Insight Fusion Analytics: Any more categorical? Zone tag or something? Is it? Do we know this before? The, uh, this starts?

0:54:03 ameeshkatariya: Uh, the zone tag?

0:54:07 Insight Fusion Analytics: Yeah. Like, let's say something. Let's say, uh, side. Let's take side. Yeah, side

0:54:19 ameeshkatariya: is something we know before. Zone is also that we detect.

0:54:23 Insight Fusion Analytics: Oh, so let's do this experiment for me to show you. Uh, what is the result called? Oh, gross PNL.

0:54:30 ameeshkatariya: Yeah.

0:54:31 Insight Fusion Analytics: Okay. We do this. We run this. We can even choose the number of stats. I've built everything. We can get every single stat over here.

0:54:37 Insight Fusion Analytics: Uh, so whatever optimization we are talking, we can get it in one shot. So currently what is the, uh, PNL that we are getting for, uh,

0:54:47 ameeshkatariya: each strategy? The best, mostly they are loss-making or they are break-even. The best one is the RNG. The early breakdown variant, which I have run, yeah, the G2 could be one.

0:55:04 Insight Fusion Analytics: Let's see what gives us the best PNL. What's the best PNL you have gotten till now?

0:55:09 ameeshkatariya: Wait, I'll just give you the number. It's, it's on the last report. Yeah, it's 20,866.

0:55:26 Insight Fusion Analytics: Mean, mean, like, ah, but, yeah. Okay, anyway.

So, okay, total PNL we are talking about, right?

0:55:33 ameeshkatariya: Yeah, yeah, yeah. Total

0:55:34 Insight Fusion Analytics: PNL. 20,000. Okay, we need to get the sum right. What's the best you've

0:55:41 ameeshkatariya: gotten? 20,000, I

0:55:43 Insight Fusion Analytics: think. 20,000, okay. So, if the variant is G2. And, what is that, uh, what is the, uhm, uh, you got 20,000 for?

0:56:06 ameeshkatariya: This was MGC. The instrument was MGC.

0:56:10 Insight Fusion Analytics: That's it. For instrument MGC, you got 20,000.

0:56:13 ameeshkatariya: Yes, correct. And the variant there, was the, uh, it was the group 2. TPSL only. You will, Group? Group 2?

0:56:25 ameeshkatariya: Okay.

0:56:25 Insight Fusion Analytics: G2.

0:56:26 ameeshkatariya: Add group, right? Yeah, yeah, yeah.

0:56:29 Insight Fusion Analytics: It's group

0:56:31 ameeshkatariya: within group 2.

0:56:33 Insight Fusion Analytics: Where?

0:56:34 ameeshkatariya: Which, what? It's associated with the, uh, wait, where is it? Trade ID pay. Oh, no. One second.

0:56:46 Insight Fusion Analytics: I can show you this.

0:56:48 ameeshkatariya: Yeah, I'm just seeing the Excel only.

0:56:53 Insight Fusion Analytics: Yeah.

0:56:55 ameeshkatariya: Should be on variant. On the variant one you should see. Where is G2? Yeah, you should see G2 underscore TPSL only.

0:57:11 Insight Fusion Analytics: Wait, G2?

0:57:13 ameeshkatariya: Yeah, G2.

0:57:15 Insight Fusion Analytics: In variant you are saying?

0:57:17 ameeshkatariya: Yeah, yeah, in variants. If you scroll down, right, you will see G2 also. Ah, okay. G2 underscore TPSL underscore only.

0:57:28 Insight Fusion Analytics: Man, uh. Okay, variant you want only G2.

0:57:40 ameeshkatariya: Yeah,

0:57:45 Insight Fusion Analytics: see, you can see. Yeah, G2, TPSL. Below, below, below. Yeah, yeah, yeah, yeah.

0:57:45 ameeshkatariya: See these ones. The G2, TPSL only, ES, GP, G2, TPSL only, MGC.

0:57:52 Insight Fusion Analytics: Okay, so for this you are, what? 20,000.

0:57:56 ameeshkatariya: Where is the column, gross P&L there, net P&L?

0:58:07 Insight Fusion Analytics: It's 62.5.

0:58:09 ameeshkatariya: No, you can just. That's the sum total of all trades in. So we actually filter them out by time, right?

0:58:23 ameeshkatariya: In the later part. The latest version, wait, I think you are on the wrong one, dps, one sec, rfilter, it's g2 underscore rfilter, sorry.

0:58:41 ameeshkatariya: It's not this one, if you can just change the variant to g2 underscore rfilter, yeah, yeah, mgc, g2 underscore rfilter, oh, at the top of, yeah, there.

0:58:51 Insight Fusion Analytics: G2 underscore?

0:58:53 ameeshkatariya: Rfilter underscore mgc, yeah, there, right there.

0:58:56 Insight Fusion Analytics: R, okay, underscore mgc. Yeah.

0:58:57 ameeshkatariya: PNL

0:58:58 Insight Fusion Analytics: is 20,866. Perfect.

0:59:03 ameeshkatariya: Correct.

0:59:04 Insight Fusion Analytics: So, why didn't we get this over here? Rows are 768. Thank you. Did the entire Excel get loaded over here?

0:59:17 Insight Fusion Analytics: Yeah, I'm sure.

0:59:19 ameeshkatariya: I think so.

0:59:26 Insight Fusion Analytics: Uh, what is this? Instrument?

0:59:42 ameeshkatariya: I'm sorry, I don't understand stats much, but how do we read this?

0:59:52 Insight Fusion Analytics: I'll show you. So basically, this means, so line 1 means that when the instrument is, it's not a stats thing, variation.

1:00:00 Insight Fusion Analytics: When the instrument is MGC only, the total PNL was 16882. I'll show you once, OK.

1:00:10 Chirag Pandya: But Anmol, are you keeping that variant column unique? Otherwise, you could have, like, concurrent rates you could be looking at.

1:00:20 Insight Fusion Analytics: What do you mean?

1:00:22 Chirag Pandya: The variant, uh, there are multiple variants in this data and multiple variants have their own set of traits. So there could be concurrent rates.

1:00:33 Chirag Pandya: No, it could be.

1:00:35 Insight Fusion Analytics: For example, if you only want to check something for one, uh, variant, okay. Then all we have to do is, uh,

1:00:41 Chirag Pandya: Yeah, that, uh, that would be a more realistic,

1:00:45 Insight Fusion Analytics: uh,

1:00:46 Chirag Pandya: uh, thing to look and look at row number nine.

1:00:50 Insight Fusion Analytics: Yeah. So that means now everything belongs to at least one variant. Okay. So, so this means that for this. When, uh, G2R filter, MGC, and when side is long, we are getting a profit of grow, uh, PNL of 33,000, uh, is that 33.49?

1:01:12 ameeshkatariya: Sorry,

1:01:12 Insight Fusion Analytics: uh, the, where's the

1:01:14 ameeshkatariya: net PNL column is, oh, wait, where did it go?

1:01:20 Insight Fusion Analytics: Yeah. 22,480. Okay. But, uh, the problem over here is it has currently only calculated 73 variations. Where there should be millions of variations.

1:01:31 Insight Fusion Analytics: I don't understand, uh, why there are only, I made a mistake over here. I haven't configured this. Probably. Let me try it again.

1:01:38 Insight Fusion Analytics: Uh, variant instrument and what is the third thing? Side. Okay, let me configure.

1:01:52 ameeshkatariya: Yeah, yeah, we can keep it as side as well, long or short threads.

1:01:57 Insight Fusion Analytics: This is the mistake that I made. All. Okay, now it might take a little time to run.

1:02:10 Insight Fusion Analytics: We'll get the right answer. No, it's NetPNL, right?

1:02:19 ameeshkatariya: Yes, correct.

1:02:35 Insight Fusion Analytics: Let's see what, what we get, we should, is this the one that you

1:02:43 ameeshkatariya: got? 2866, one second.

1:02:49 Insight Fusion Analytics: Rfilter, MGC.

1:02:51 ameeshkatariya: Yes, yes, yes, yes, this is the one.

1:02:54 Insight Fusion Analytics: Okay, so you see, in one shot we are getting, I mean, this is the best that you got, but in one shot we are getting, we don't even need to look, which one is, we don't need to look, do you understand?

1:03:04 Insight Fusion Analytics: You don't need to spend time. And you can ask me, uh, if you are, uh, confused about it, but let me show you what we're going to do.

1:03:10 Insight Fusion Analytics: Once we, once you run this, right, uh. Okay, once you run this, is this matching? Oh

1:03:40 ameeshkatariya: yes, correct, correct,

1:03:48 Insight Fusion Analytics: So now we know all the variants, like OHS, I don't

know why there are just so many, uh, Instrument isn't, Why is Instrument blank?

1:04:00 ameeshkatariya: Instrument should be MS or MGC or EMS

1:04:04 Insight Fusion Analytics: It's probably because of this filter, uh, Okay. So.

1:04:43 Insight Fusion Analytics: Now we have tried every single variation over here, you know, where, uh, I still don't know why instrument isn't there.

1:04:50 Insight Fusion Analytics: Have we chosen instrument? Okay, that's because this is, if I remove this, okay then we will get all the instruments.

1:05:24 Insight Fusion Analytics: Okay, anyway. So over here, the matching rows are like, uh, so, okay, basically after doing all of this, we'll get the variation that's already doing the best.

1:05:39 Insight Fusion Analytics: So I want to ask you, how did you figure out that this one's doing well?

1:05:44 ameeshkatariya: Oh no, I just, I ran multiple variants of backtests, like different stop-loss criterias and all of that. And this is the one that I tested most recently, in the Rfilter one where it.

1:05:59 ameeshkatariya: This is the last 27 months of data, the hours that were causing the most losses, we just segregated those. And the ones which were profitable are the ones that I ran the backtest and I got this result.

1:06:12 ameeshkatariya: It was not any variant as such. I think we don't have enough data. We don't enough variants, like, shouldn't we have to test a lot of variants in order for this optimization to run?

1:06:25 Insight Fusion Analytics: Right, so first, before this, there will

1:06:26 Chirag Pandya: be, Anmol, can I drop off? I'm doing, starting some work on calls and, I, I probably don't need to be on this.

1:06:35 Insight Fusion Analytics: Okay, sounds good. So, again, like I said, I want to discuss a time with you all where we can, uh, finish the to-do IST part.

1:06:42 Insight Fusion Analytics: What time can we do it tomorrow? Can you all, all three tell me a time?

1:06:47 Chirag Pandya: Tomorrow morning? Tomorrow morning. Tomorrow morning will be best, start of the day.

1:06:50 Insight Fusion Analytics: What time works?

1:06:52 Chirag Pandya: Like,

1:06:52 Insight Fusion Analytics: 11 works for Amish, Amish is in Switzerland time right now.

1:06:56 Chirag Pandya: Uh, yeah, then maybe afternoon?

1:06:59 ameeshkatariya: One would work better. One

1:07:00 Chirag Pandya: is good, one is good,
1:07:01 Ajinkya Dhumal: uh, Yeah. For me also, like, one also, one is fine.
1:07:06 Insight Fusion Analytics: One pm works. Okay. Okay. Okay, Chirag. We'll see you then. Okay. So, yes, for this also, if you, uh, if you give me, like, a, uhm, a, a, a, a, raw data, right, I can even try out so many different variations in one shot.
1:07:27 ameeshkatariya: Like, yeah, I think we would need to test, let's say, if I'm trying combinations on the top, right of 933, 932, like, the EMAs, I think if, for this, we will need to test hundreds and hundreds of EMA, and once we have all the raw data for that, then this optimization can run very well.
1:07:49 Insight Fusion Analytics: I'll tell you how will this optimization run. Give me a one second, okay? I want the data in one format and I'll tell you which format do I want.
1:07:55 Insight Fusion Analytics: Okay. One second now. Okay. So, uhm, one second. Every single thing that you all have done, right?
1:08:51 Insight Fusion Analytics: Like, every single thing. Every single thing that can be done. Okay. So this is 20 years of raw data over here of sports.
1:08:58 Insight Fusion Analytics: Okay. We don't need to go into the details. 11,000 rows. Now, every single strategy over. Okay. First I'm going to show you all.
1:09:08 Insight Fusion Analytics: All the kind of feature engineering that has been done. It's there right here. Okay.
1:09:22 Insight Fusion Analytics: Very, very heavy. Feature engineering, everything over here in the raw, like basically indicators in terms of, uh, uh, stock market, all the indicators are over here.
1:09:32 Insight Fusion Analytics: Okay.
1:09:33 ameeshkatariya: Okay.
1:09:35 Insight Fusion Analytics: Now all the strategy back tests are over here. I'll show you where. Strategy one, strategy two, three, four, five, six, et cetera.
1:09:46 Insight Fusion Analytics: Every single thing over here in one shot, in one view, every single thing is visible. We can never analyze. See, no matter how smart an analyst is, till the time we don't have the data in one good format, we can never have a good analysis.
1:10:04 Insight Fusion Analytics: Okay. Over here, in your Excel, everything is in a separate sheet, right? It's impossible to analyze for example. Over here, strategy 1, over here, what does 1 mean?
1:10:17 Insight Fusion Analytics: 1 means it has taken the trade. You understand? 0 means it didn't take the trade over there. Okay. In this simple format, we need the

data.

1:10:29 Insight Fusion Analytics: Over here, in, over here itself, we'll get, uh, one second.

1:10:35 ameeshkatariya: So, can you, can you, like, give this to your Claude?

1:10:41 Insight Fusion Analytics: I can make it in one shot. You ask me, I can make this in one day. I'll, even if it takes me 24 hours.

1:10:45 Insight Fusion Analytics: I'll do it. I'm so, I'm so excited to test everything that I have, you know? So, but I want you to see this over here.

1:10:52 Insight Fusion Analytics: You see strategy. This is the average PNL, right?

1:10:55 ameeshkatariya: Strategy

1:10:56 Insight Fusion Analytics: one, two, three, four, five. Okay.

1:11:00 ameeshkatariya: All in one sheet. Okay.

1:11:01 Insight Fusion Analytics: One sheet. Now we can put this in analysis. Okay. Now I can try every possible thing over here. You get it?

1:11:10 Insight Fusion Analytics: There's a lot more that can be done. That's where, so you see, like it's impossible. I mean, I know that I don't want to say it, but for me, it's impossible that I can't find a profitable strategy.

1:11:22 Insight Fusion Analytics: You know, like Amish, if there's a bad client, I'll give him a profitable strategy with bias. It's impossible that I don't find a good strategy with bias for a good client.

1:11:33 Insight Fusion Analytics: We'll have to find a good strategy without bias. That's a difficult task.

1:11:37 ameeshkatariya: Okay.

1:11:37 Insight Fusion Analytics: 10 million variations. I'll just run in one shot. See over here also, you see, like, I, you will definitely find something that's profitable.

1:11:46 Insight Fusion Analytics: Something or the other will be profitable for sure. Okay. Okay. So it's not difficult at all, but it needs to be presented in this format.

1:11:57 Insight Fusion Analytics: Do you get it? I can, I'm happy. I'll do that, uh, on my cloud in one set. I in fact want to take over the entire optimization, I'm waiting for your approval to ask my help.

1:12:06 Insight Fusion Analytics: You know, that's what I've been saying. Please. I enjoy it. That's what my, uh, all the previous part and the execution part is something that I don't enjoy.

1:12:14 Insight Fusion Analytics: This is something that I can work 24 hours on. Put me on it. I am a one man army on this.

1:12:20 ameeshkatariya: Yeah.

1:12:21 Insight Fusion Analytics: So

1:12:22 ameeshkatariya: that's it.

1:12:22 Insight Fusion Analytics: Again, to get back, this is, uh, in terms of stock market, this is the raw data. Okay. In terms of stock market, this is the, um, I'll also show you all how do we present this in a perfect way for, for ourselves.

1:12:39 Insight Fusion Analytics: One second. Um, okay. We go over here. View. Okay. Free spin. Okay. So now whenever we go, we even know exactly, uh, where we are.

1:12:56 Insight Fusion Analytics: So basically this part is feature engineering for us. All the indicators. Now this is complicated in our stuff. How many, we'll have two, three indicators.

1:13:06 Insight Fusion Analytics: This is 86 indicators. Okay. Over here, 40 different unique strategies. Okay. Uh, not even 40 variations, but 40 unique strategies.

1:13:19 Insight Fusion Analytics: Okay. For each of those strategies also, we can. We can create so many different variations. Okay. So I am more than happy to do this for you guys.

1:13:27 Insight Fusion Analytics: And I will come up with 10,000 backtests and then I'll do 10 million variations for those 10,000 backtests. And it's not possible to not come up with something profitable.

1:13:38 Insight Fusion Analytics: Do you get it?

1:13:40 ameeshkatariya: Yeah. Okay.

1:13:41 Insight Fusion Analytics: For Ravi. For CN. Okay. See, uh, for us, we need to work in a system. That's perfect. Okay. And that's not negotiable.

1:13:51 Insight Fusion Analytics: And we'll fix it in a day or two. Okay. We'll get the to-do, I stay in a everything. We'll get, um, all the system.

1:13:56 Insight Fusion Analytics: Correct.

1:13:57 ameeshkatariya: But,

1:13:57 Insight Fusion Analytics: uh, eventually the point is currently we are at a stage and there's nothing wrong. We are getting started. We are at a stage where none of our clients are making money because of us.

1:14:08 Insight Fusion Analytics: Okay. So. The only way clients come back to us in longterm is if they make money because of us. Now, when I was talking about the retainer model, right, what we do, we calculate all those 10 million variations in one shot.

1:14:24 Insight Fusion Analytics: We can give a hundred. In month one, we can

give a hundred in another one. We can give something that's better.

1:14:31 Insight Fusion Analytics: Okay. Not worse. Something first, like, oh, uh, like over here, we give something, uh, that is, uh, uh, that's PNL.

1:14:39 Insight Fusion Analytics: I mean, not this once we can read everything, we can give something that's PNL. PNL, 5,000, then 7,000, 15,000. We like, oh, now we came up with something that is 20,000.

1:14:49 Insight Fusion Analytics: Now we came up with something that's 25,000. We'll always come up with something better. Do you understand? That's what keeps a client going like, okay, we are coming up with, we are not here guaranteeing any, uh, future results, but if the client is genuinely someone who wants to take, uh, what do you

1:15:06 Insight Fusion Analytics: say is genuinely realistic, then we will do all those other variations as well. But for that, I want you all to.

1:15:14 Insight Fusion Analytics: Get, make me work. That's what I want. You know, all the optimization part that you all are working. I feel like, you know, I feel like I can do this.

1:15:22 Insight Fusion Analytics: You know why it's like, it's a statistician spot, but you all take it over. I don't even have the code.

1:15:27 Insight Fusion Analytics: I don't even have the results, you know? So I can't even step in, in the middle for those. Those projects, when I have the code, when I have the, when I have the results in front of me, like, okay, then I don't even need to tell you guys that I'm working on this.

1:15:38 Insight Fusion Analytics: You understand right now you send me this result. So now I can work on it without you. So if you send me, even, even if you send me these kind of results, I can work on it on my own pace.

1:15:47 Insight Fusion Analytics: You know, I'll, I'll keep on updating you guys when something because I see you all don't have help and you all are not taking my help and we are not taking each other's help.

1:15:58 Insight Fusion Analytics: That's what I see. Okay. Whether you take Jira's help or my help or Ajinkya's help, and that's only going to be possible if we work in a system, you know, we put things to do as the, we'll be like, Hey, this is the task that I can't do it.

1:16:08 Insight Fusion Analytics: I'll just be like, Hey, Amish, help me out with it. Uh, you choose Amish, you choose your own deadline takes, if it takes three days to seven days and let's complete it within that.

1:16:17 Insight Fusion Analytics: Okay.

1:16:19 ameeshkatariya: Okay. Let's

1:16:20 Insight Fusion Analytics: do that. And I don't, I'm very, see, I'm very confident I can find a profitable strategy for any client. Okay.

1:16:27 Insight Fusion Analytics: But I want you all to make me work. Okay. And I'm happy. I love it. I love working.

1:16:35 ameeshkatariya: Okay.

1:16:37 Insight Fusion Analytics: So let's connect tomorrow at 1 p.m. Let's fix the first major problem that we have. Uh, that's, uh, the deadlines and everything, which will get fixed by TodoIST.

1:16:46 Insight Fusion Analytics: Okay. Right. Amish, Ajinkya, sounds good.

1:16:49 ameeshkatariya: Yeah, yeah, yeah, yeah. Sounds good. I think, uh, yeah. Okay. That is it. Yeah.

1:16:55 Insight Fusion Analytics: Let's get that problem solved. And then let's solve this optimization problem because this is going to make a client feel like, okay, wow, there's something profitable right over here.

1:17:05 Insight Fusion Analytics: See, if we have 10 million customers, 10 million variations, right? Every time a client messages, throw something on his face, take the hundred more, take a hundred more, take a hundred more.

1:17:13 Insight Fusion Analytics: It's like, do you understand? It's like those social media people that create the content for an entire year, right? We'll keep that ready.

1:17:20 Insight Fusion Analytics: The client asks, take this, take this, take this. He should be like, okay, oh wow. These people have tried so many variations, you know, and

1:17:27 ameeshkatariya: we are,

1:17:27 Insight Fusion Analytics: we have pre-tried it. Okay. Makes sense. No,

1:17:30 ameeshkatariya: it makes sense. Yeah. Yeah.

1:17:33 Insight Fusion Analytics: Okay. So yeah, tomorrow 1pm, first thing let's get the to-do IST done. And then all three of you.

1:17:39 Ajinkya Dhumal: Okay.

1:17:40 Insight Fusion Analytics: We work 24 hours. Okay. I'm happy with that. For the optimisation.

1:17:44 Ajinkya Dhumal: Okay.

1:17:45 Insight Fusion Analytics: Okay.

1:17:46 ameeshkatariya: Okay. Okay. Cool. Okay. Thanks Anmol. See you. Good morning.
