

VAM Split Strategy — Auditor Re-Run Checklist

Follow these steps to independently verify the backtest results.

Requirements

- Python 3.11+ | packages: pandas, numpy, reportlab, openpyxl, plotly
- DataBento CSVs in data/databento/equities/ (SPY, UPRO, QQQ, TQQQ, SPXU, SVIX, SGOV, VIX — all included in data/)
- Run from the project root: Prompting General Framework/IFA AI Framework/projects/algo_trading/_engine/code/

Step-by-Step Verification

Step	Command	Expected Output
1. Run Step 1	python clients/ravi_vam/scripts/vam_step1_databento.py	Final: \$335,832 Sharpe: 0.597 Trades: 90
2. Run Step 2	python clients/ravi_vam/scripts/vam_step2_databento.py	Final: \$412,103 Sharpe: 0.665 Trades: 294
3. Run Step 3	python clients/ravi_vam/scripts/vam_step3_databento.py	Final: \$69,917 Trades: 48 Round trips: 24
4. Run Step 4 SVIX	python clients/ravi_vam/scripts/vam_step4_svix_databento.py	Final: \$109,831 Trades: 6 All 6 gate tests PASS
5. Run Combined	python clients/ravi_vam/scripts/vam_step4_combined.py	Final: \$309,635 Sharpe: 0.508 Max alloc: 63.5%
6. Test Excel	python clients/ravi_vam/scripts/vam_parameter_run_test.py	Deploy run matches baseline within 0.1 Sharpe

Key Checks to Verify Manually

1. **No look-ahead bias:** grep for shift(- in all scripts → should return nothing.
2. **75/25 allocation:** In vam_step2, check STATE_ALLOCATION[BULL_100] = (0.7425, 0.2475).
3. **SVIX date gate:** In vam_step4_svix, first BUY trade should be 2022-05-12 (after launch 2022-03-30).
4. **SPXU CASH gate:** grep for step2_state in vam_step3 — all SPXU entries inside CASH only.
5. **Allocation cap:** In combined metrics JSON, allocation_cap_violated_days must be 0.
